

How to Change Browser Cache TTL?

Browser cache Time To Live (TTL) is the length of time that a web browser should store and use a cache of a webpage before checking for updates or refreshing the cache. This helps to speed up the loading of webpages, as the browser can retrieve resources from the cache rather than fetching them from the server again.

How to create Cloudflare Integration

Tutorial :

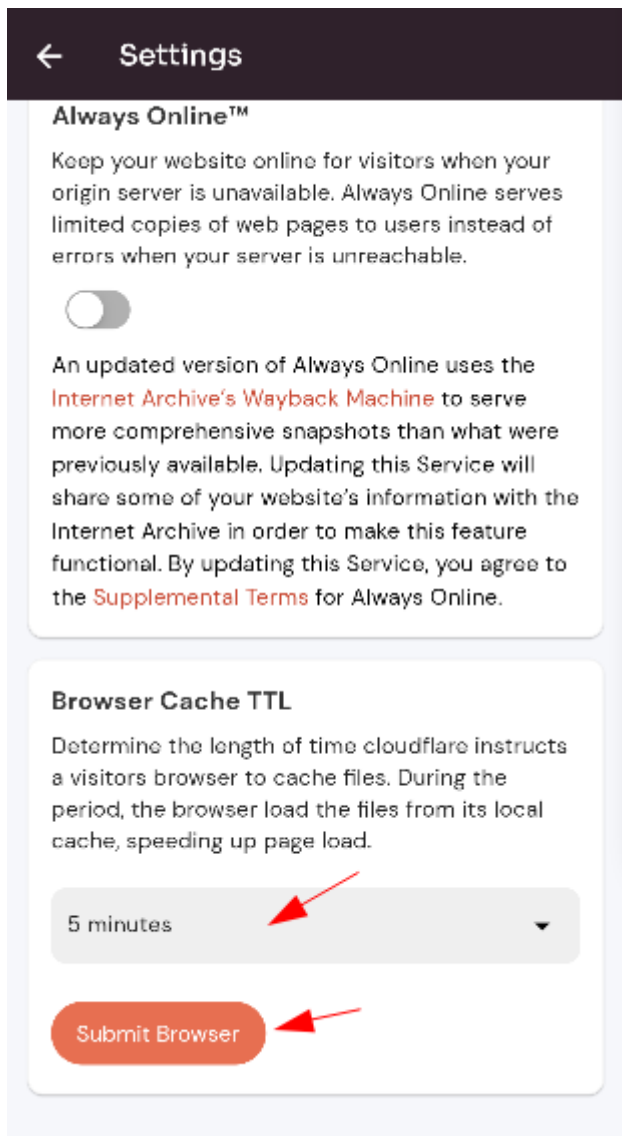

You can watch the Video or Continue reading the post.

Follow the steps below to Change Browser Cache TTL.

Navigate to the Setting (Use this link to view How to Navigate).

Select the new Browser Cache TTL and Click on the "Submit Browser" button.

Here, you can see cache purging successfully.

← Settings

Always Online™

Keep your website online for visitors when your origin server is unavailable. Always Online serves limited copies of web pages to users instead of errors when your server is unreachable.

An updated version of Always Online uses the [Internet Archive's Wayback Machine](#) to serve more comprehensive snapshots than what were previously available. Updating this Service will share some of your website's information with the Internet Archive in order to make this feature functional. By updating this Service, you agree to the [Supplemental Terms](#) for Always Online.

Browser Cache TTL

Determine the length of time cloudflare instructs a visitors browser to cache files. During the period, the browser load the files from its local cache, speeding up page load.

5 minutes
