

How to Enable or disable Maintenance Mode on a Site through the cloudpanzer mobile application?

Maintenance mode refers to a state in which a website, system, or device is taken offline for maintenance or updates. This is done to ensure that the website, system, or device is functioning correctly and to fix any issues that may be present. During maintenance mode, users may be unable to access the website or use the system or device.

Prerequisites :

You must have an Active Server and Active site. You can jump to the tutorial section if the above conditions are proper, Or first follow the links below to set up the prerequisites.
