

How to perform different operations on custom Site Environment through the mobile application?

Creating a custom site environment can be a useful tool for developers and website administrators. It allows them to create a separate, isolated space to test and debug changes to a website or application before implementing them on the live site. This can help prevent issues from arising and allow for a smoother and more streamlined update process.

Prerequisites :

You must have an Active Server and Active site. You can jump to the tutorial section if the above conditions are proper, Or first follow the links below to set up the prerequisites.

[How to install a Server](#)

[How to Setup a Site](#)

[How To Install Custom App on Domain.](#)

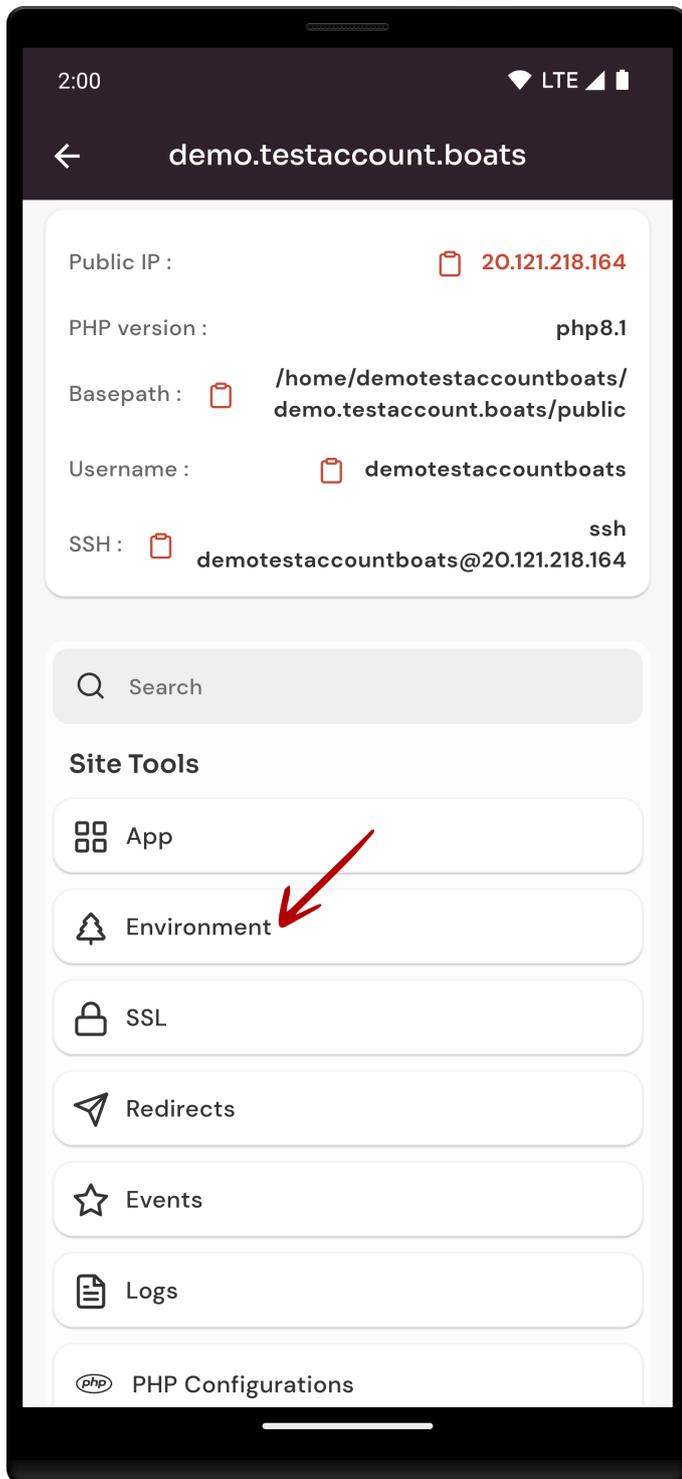

Tutorial :

You can watch the Video or Continue reading the post.

<https://www.youtube.com/embed/iXgprPIVf9I>

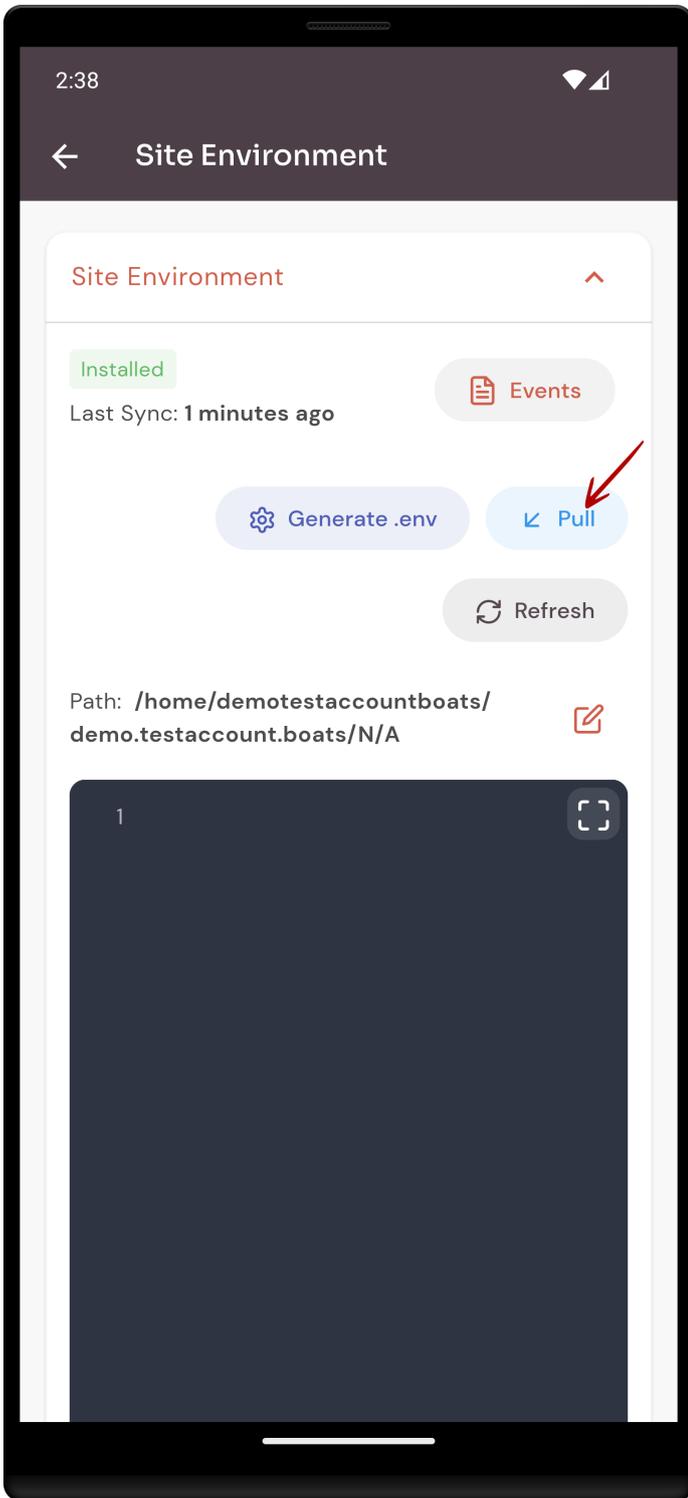

Navigate to the site Dashboard ([Use this link to view How to Navigate](#))

4. Select the Environment Option.

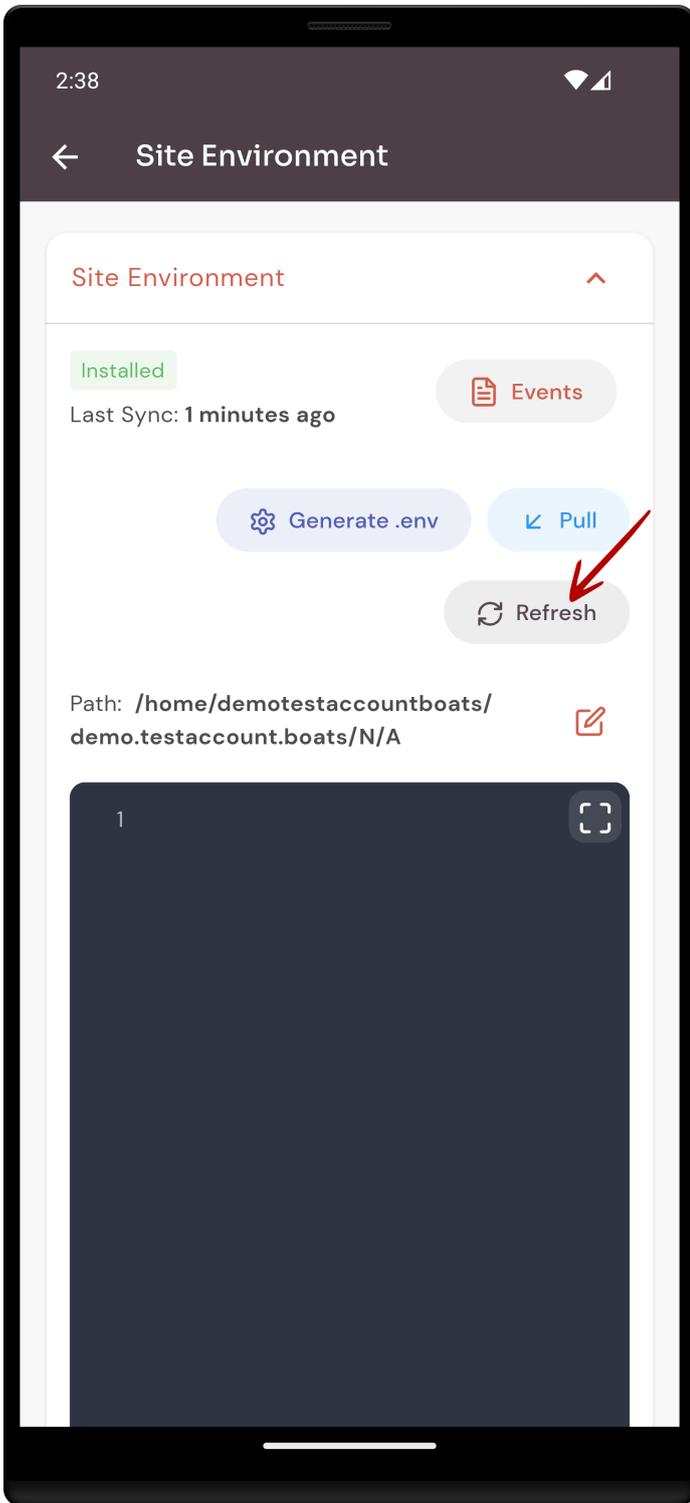

Pull :

Click on the pull button.

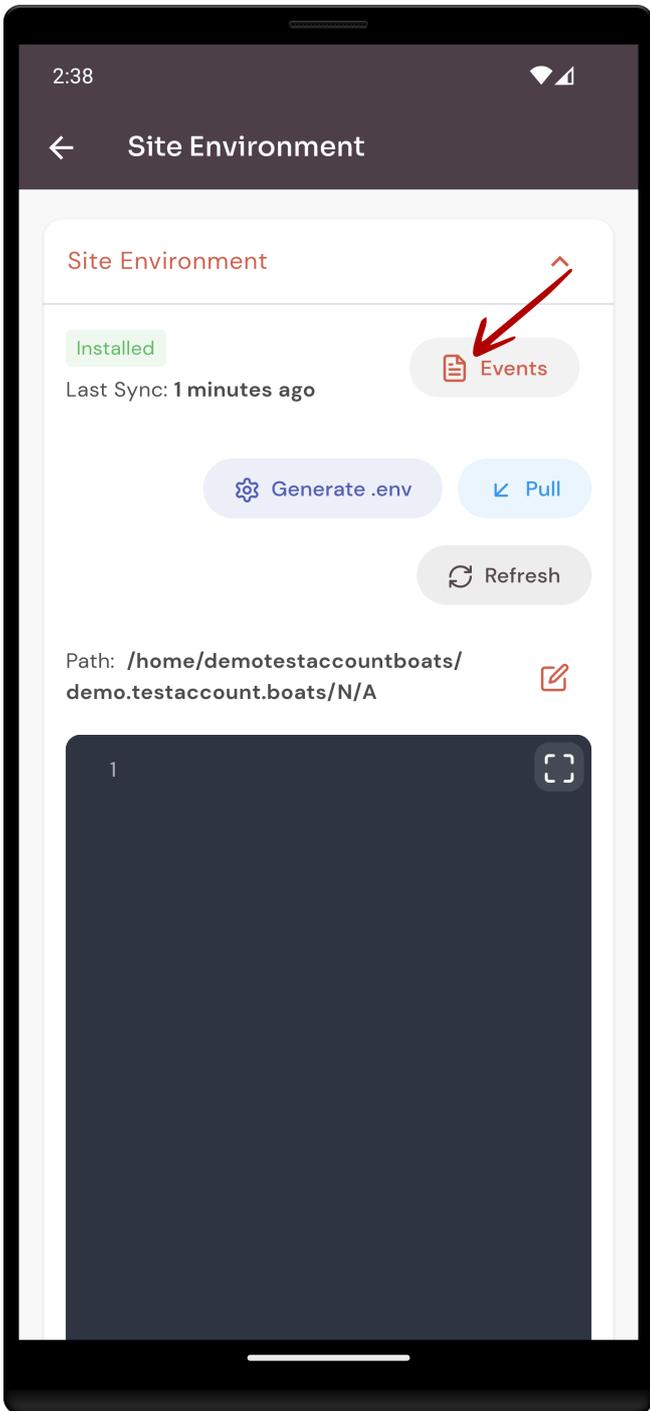

Refresh :

Click on the refresh button.

Check Event:

Click on the Event button.

Here, you can see the event.
