How to Check Daemon Events on a server through the ClouPanzer website ?

Follow the steps below to check daemon events

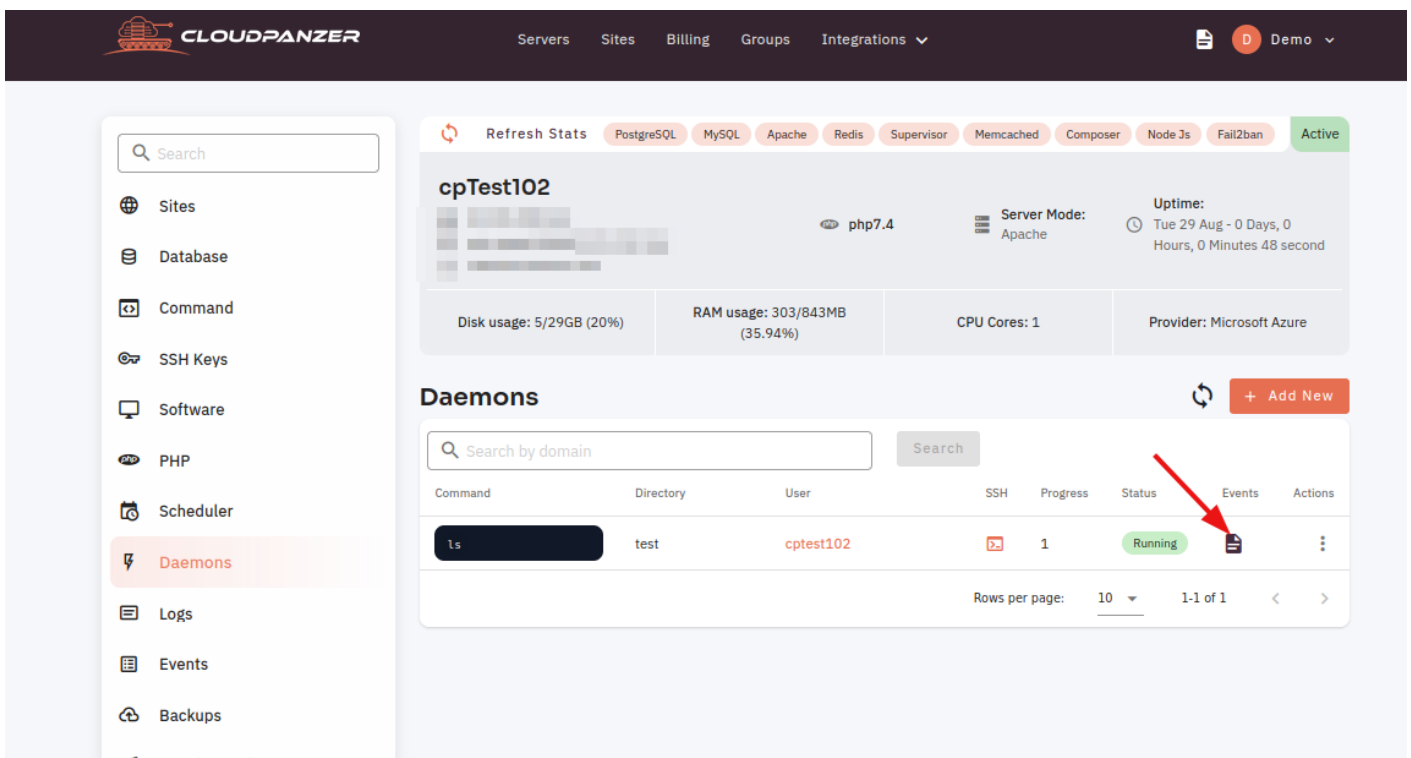

1: Once you are logged in, look for a "Server" and click on it.

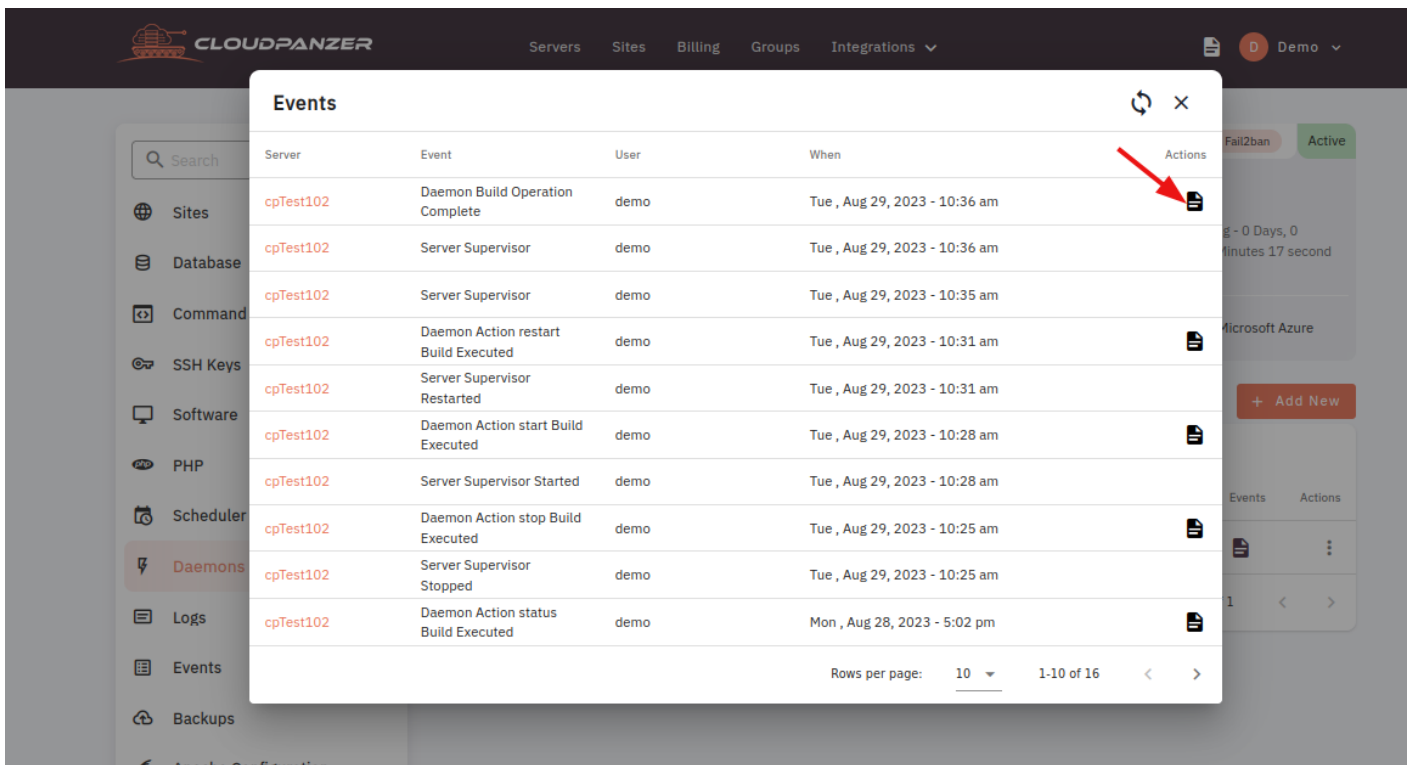

2. Click on the daemons option.

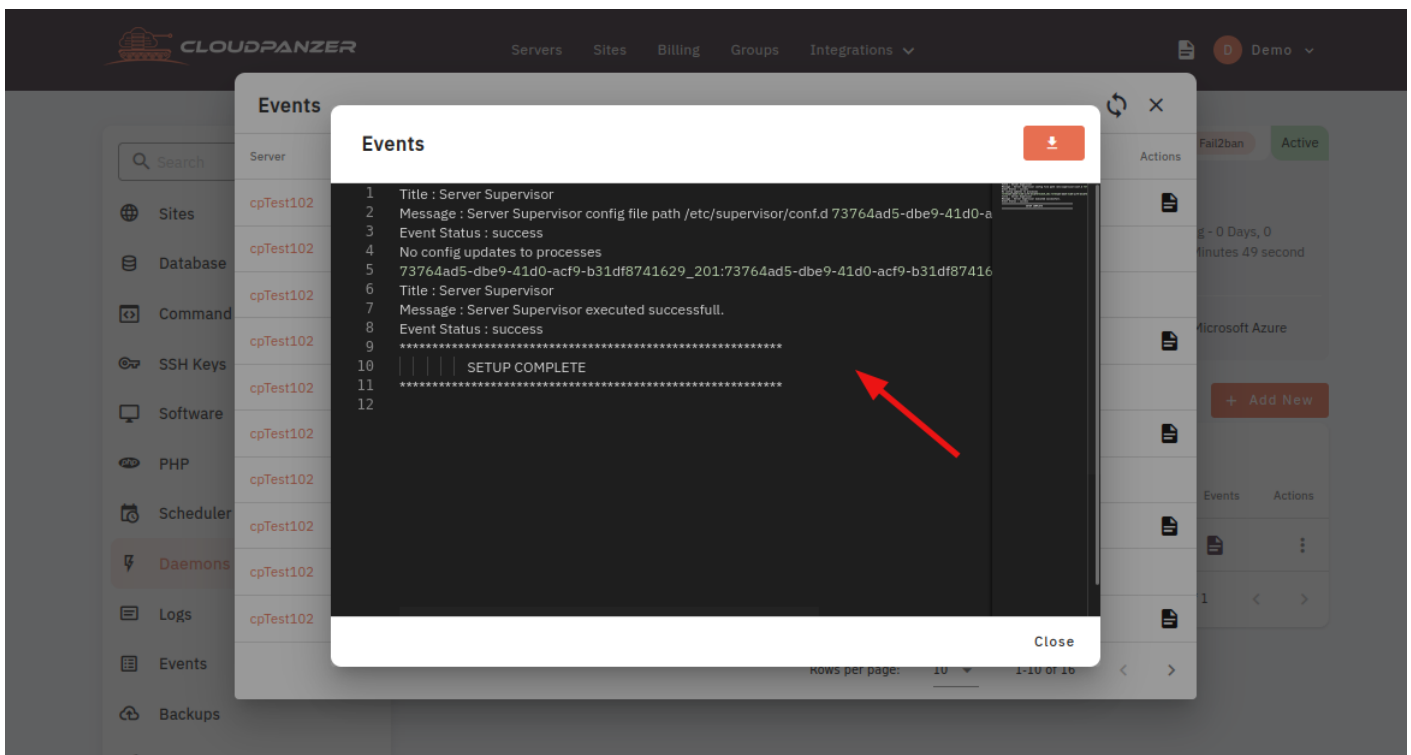

3. Click on the Event file icon.

4. The Events Dialog box will open and click on the Event file icon.

5. Here you can see the Daemon Event shown Successfully.

How to create Daemons on a server through the CloudPanzer website?

A daemon is a type of background process that runs on a computer and performs tasks without user intervention. Daemons are often used to perform system-level tasks, such as scheduling jobs, managing network connections, or monitoring system resources.

Prerequisites :

You must have an Active Server. You can jump to the tutorial section if the above conditions are proper, Or first follow the links below to set up the prerequisites.

How to install a Server

Tutorial :

You can watch the Video or Continue reading the post.

<https://www.youtube.com/embed/Mg5w2EBm5-w>

Follow the steps below to create a Daemon.

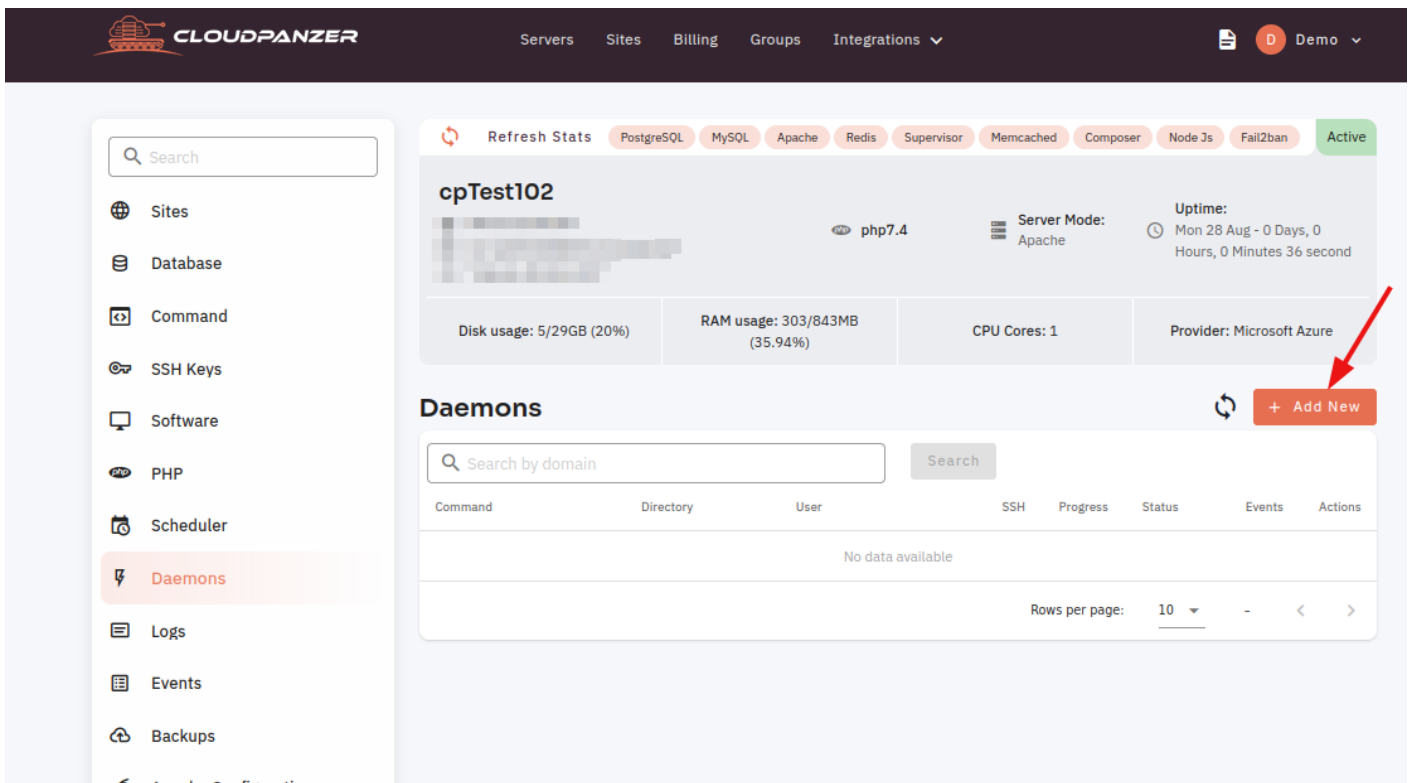

1. Once you are logged in, look for a "Server" and click on it.

2. Click on the daemons option.

3. Click on the add new button.

4. Enter the required data and click on the save changes button.

Here, you can see the Daemon was created successfully.

How to delete a Daemon on server through the CloudPanzer website?

Sometimes, it may be necessary to delete a daemon from a system for various reasons. Before proceeding, it is important to note that deleting a daemon can potentially impact the functioning of the system and should only be done with caution. It is recommended to create a backup of the system before attempting to delete a daemon.

Prerequisites :

You must have an Active Server. You can jump to the tutorial section if the above conditions are proper, Or first follow the links below to set up the prerequisites.

How to install a Server

Tutorial :

You can watch the Video or Continue reading the post.

https://www.youtube.com/embed/oj9ftW697_Y

Follow the steps below to Delete a Daemon.

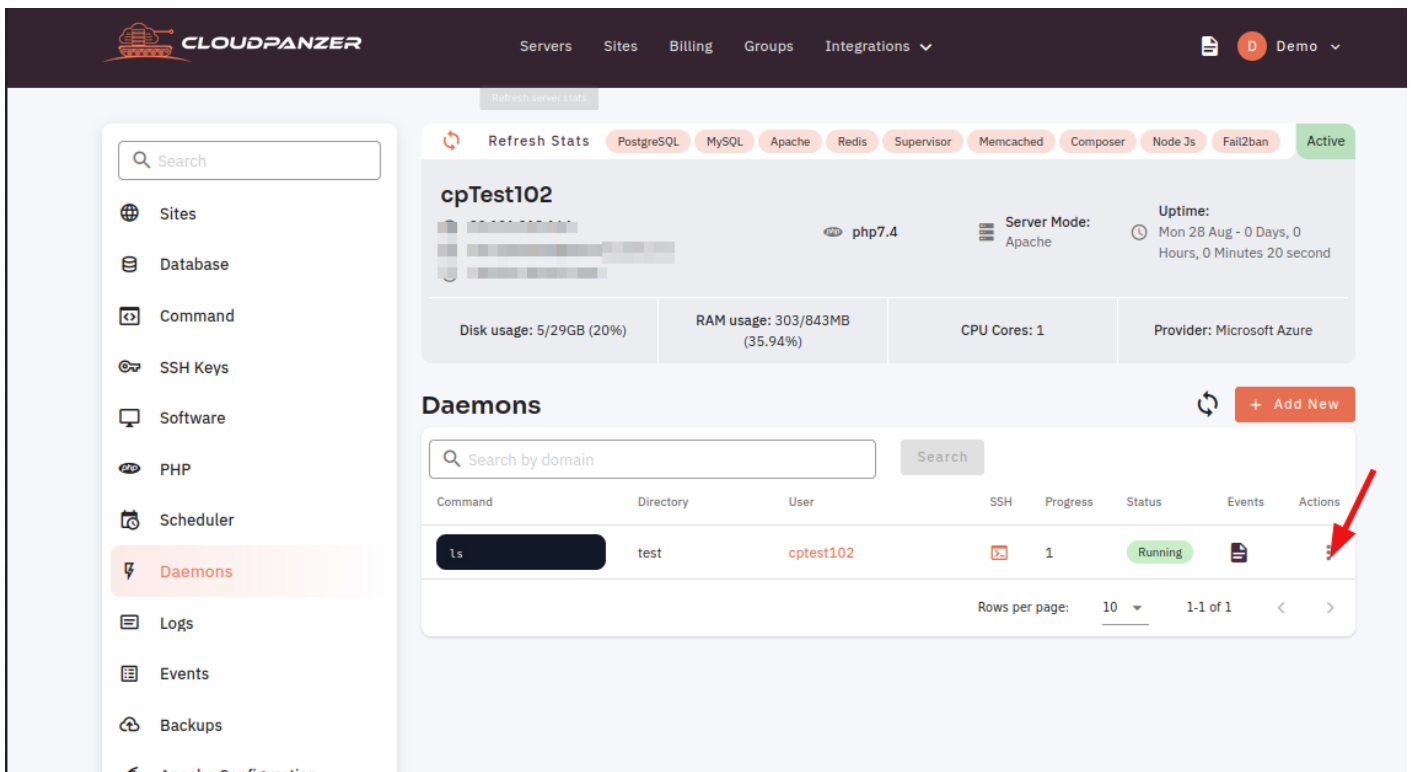

1. Once you are logged in, look for a "Server" and click on it.

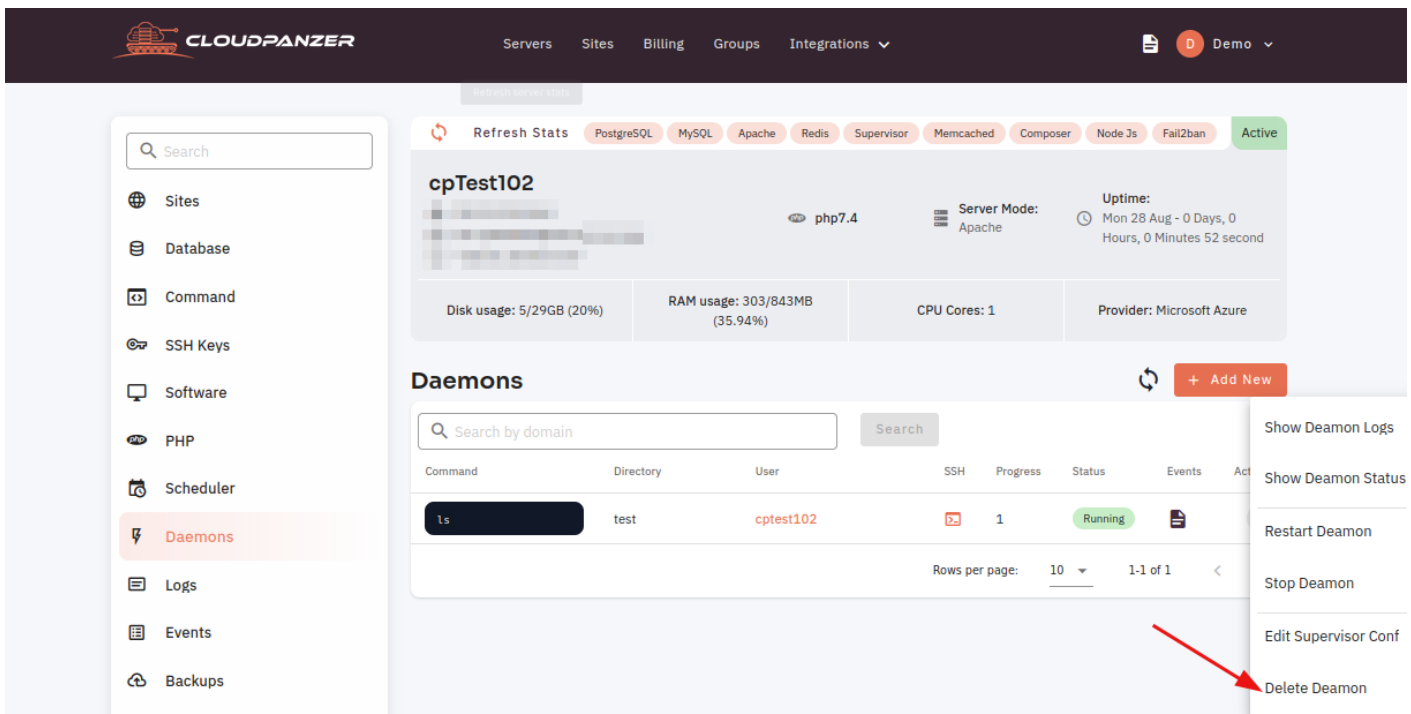

2. Click on the daemons option.

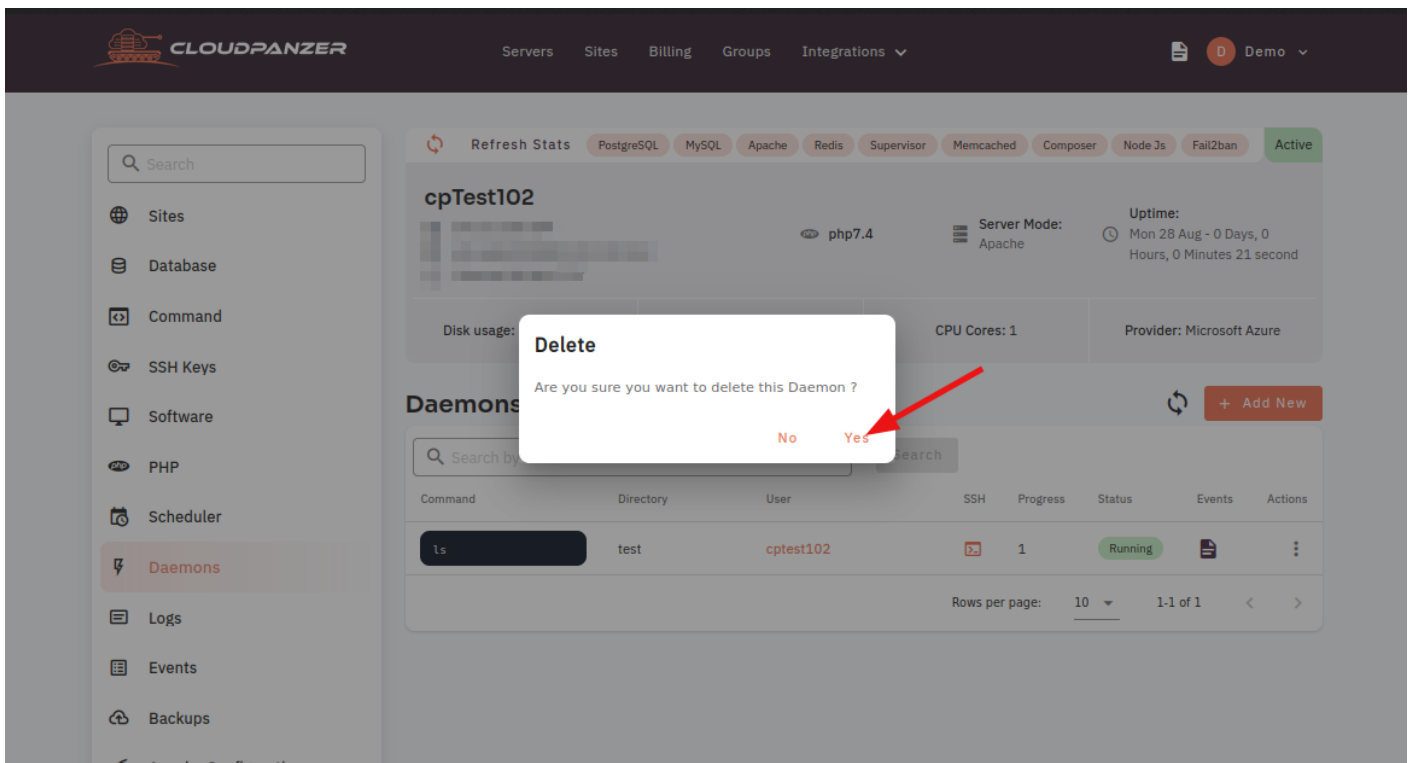

3. Click on the menu icon.

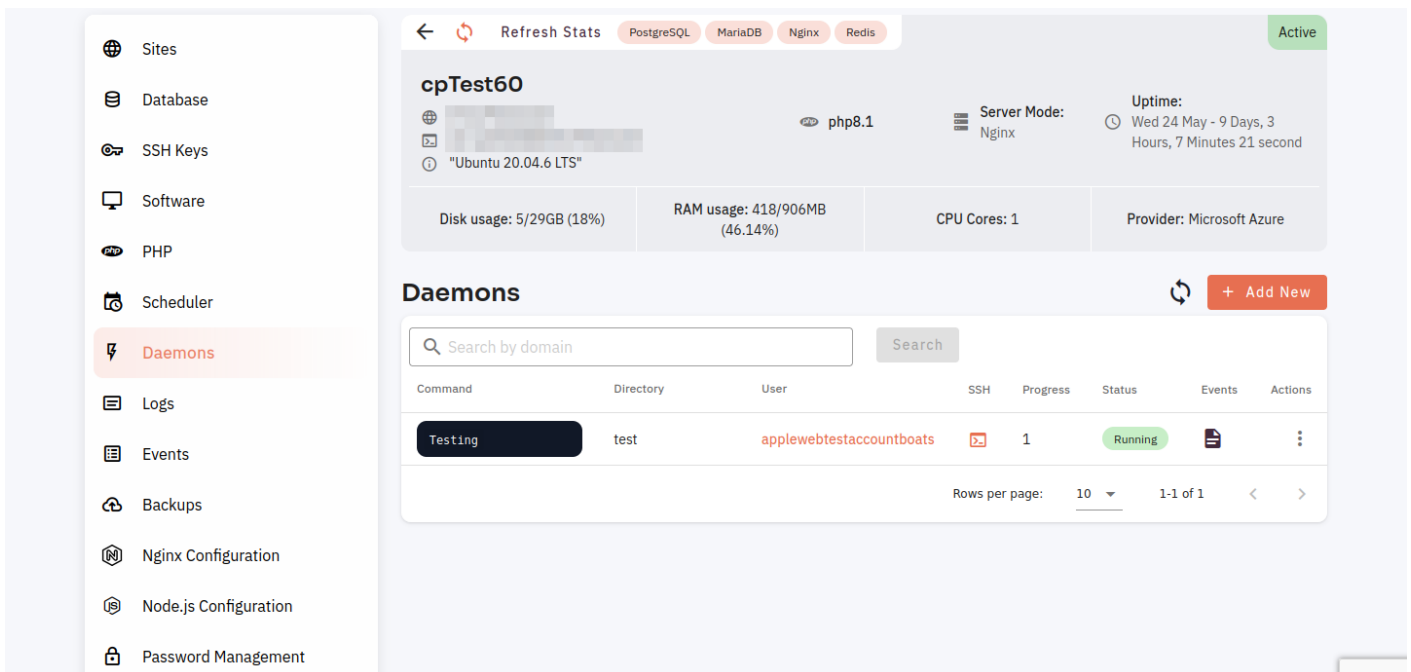

4. Click on the delete daemon button.

5. Click on the Yes button.

Here, you can see the Daemon was deleted successfully.

How to Edit Supervisor Conf in Daemons on a server through the CloudPanzer website?

The Supervisor daemon is a process control system that allows you to control and monitor processes on your system. It is often used to manage long-running processes, such as web servers or database servers.

Prerequisites :

You must have an Active Server. You can jump to the tutorial section if the above conditions are proper, Or first follow the links below to set up the prerequisites.

How to install a Server

Tutorial :

You can watch the Video or Continue reading the post.

<https://www.youtube.com/embed/sISPodyX2V0>

Follow the steps below to Edit supervisor conf in Daemons.

1. Once you are logged in, look for a "Server" and click on it.

2. Click on the daemons option.

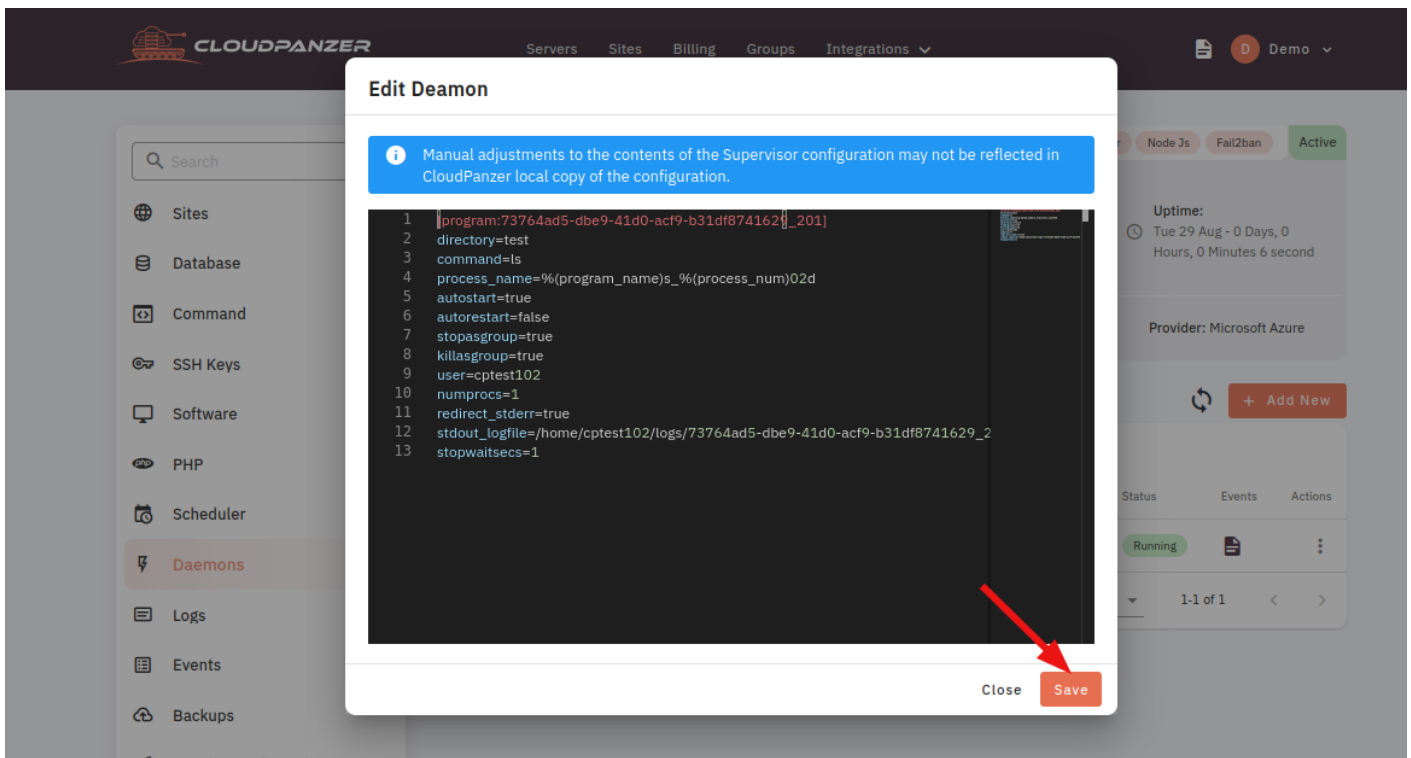

3. Click on the menu icon.

The screenshot shows the CloudPanzer dashboard. On the left is a sidebar with navigation links: Sites, Database, Command, SSH Keys, Software, PHP, Scheduler, **Daemons**, Logs, Events, and Backups. The main content area is titled 'cpTest102' and includes a 'Refresh Stats' button and a row of service tabs: PostgreSQL, MySQL, Apache, Redis, Supervisor, Memcached, Composer, Node Js, Fail2ban, and an 'Active' tab. Below this, server details are shown: php7.4, Server Mode: Apache, Uptime: Mon 28 Aug - 0 Days, 0 Hours, 0 Minutes 20 second, Disk usage: 5/29GB (20%), RAM usage: 303/843MB (35.94%), CPU Cores: 1, and Provider: Microsoft Azure. The 'Daemons' section features a search bar and a table with columns: Command, Directory, User, SSH, Progress, Status, Events, and Actions. A single daemon is listed with Command 'ls', Directory 'test', User 'cptest102', SSH icon, Progress '1', Status 'Running', and an Actions icon. A red arrow points to the 'Actions' column header. At the bottom right of the table, it says 'Rows per page: 10' and '1-1 of 1'.

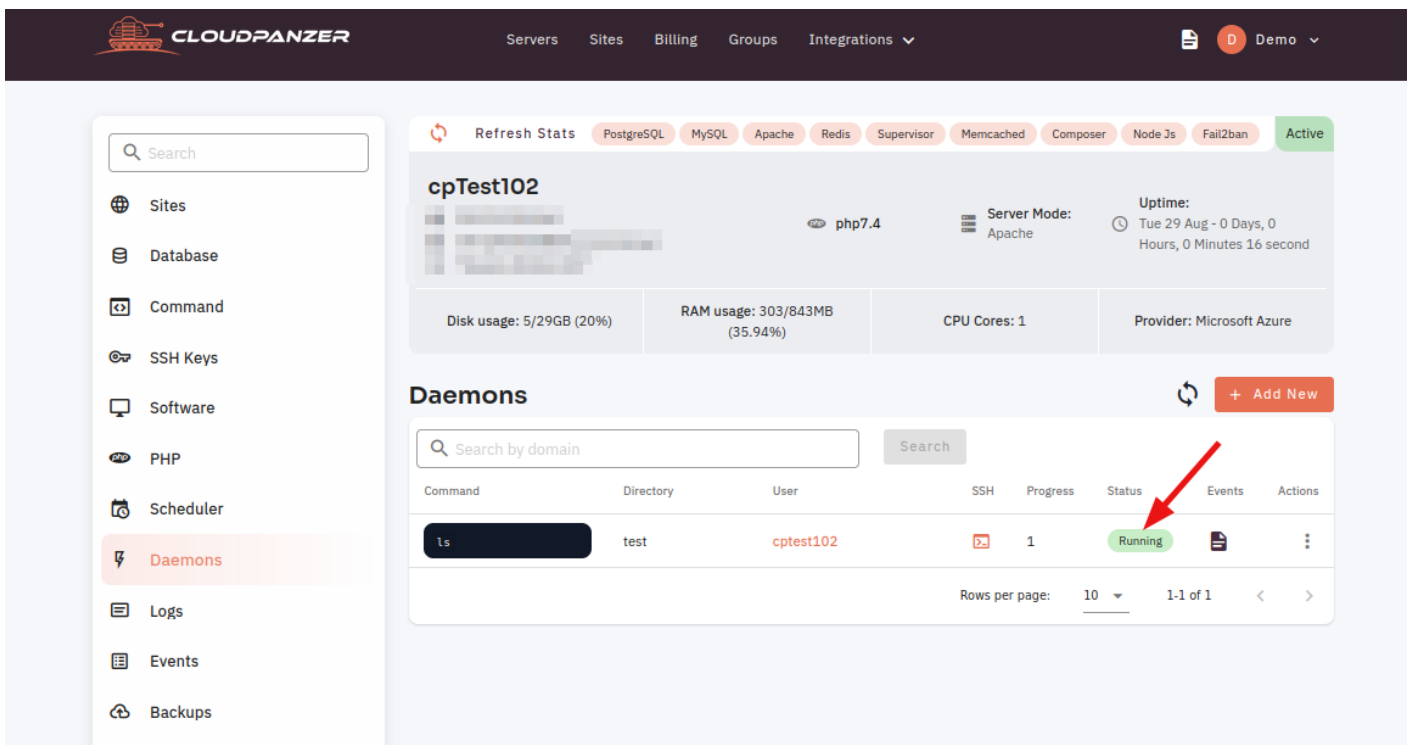

4. Click on Edit Supervisor conf

This screenshot is similar to the previous one, but the context menu for the daemon is open. The menu options are: Show Deamon Logs, Show Deamon Status, Restart Deamon, Stop Deamon, **Edit Supervisor Conf** (highlighted with a red arrow), and Delete Deamon. The background interface remains the same, showing the 'cpTest102' server details and the 'Daemons' table.

5. Here, you can make changes and then click on the Save button.

Here, you can see the Edit Supervisor conf in Daemons updated successfully.

How to restart a Daemon on a server through the CloudPanzer website?

Restarting server daemons is done to apply configuration changes, resolve bugs, release resources, clear connection issues, improve performance, recover from crashes, apply security updates, and diagnose problems. It ensures smooth operation, efficient resource usage, and service reliability.

Prerequisites :

You must have an Active Server. You can jump to the tutorial section if the above conditions are proper, Or first follow the links below to set up the prerequisites.

How to install a Server?

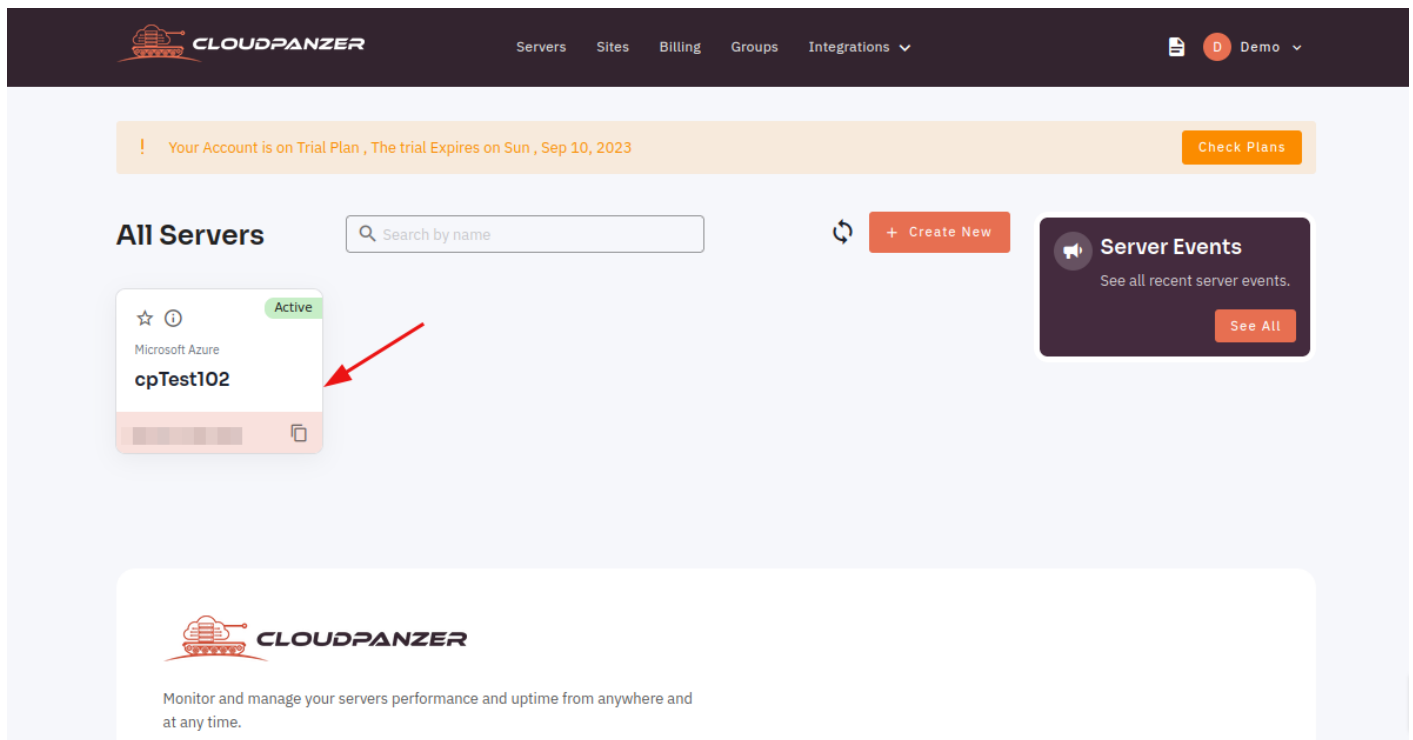

Tutorial :

You can watch the Video or Continue reading the post.

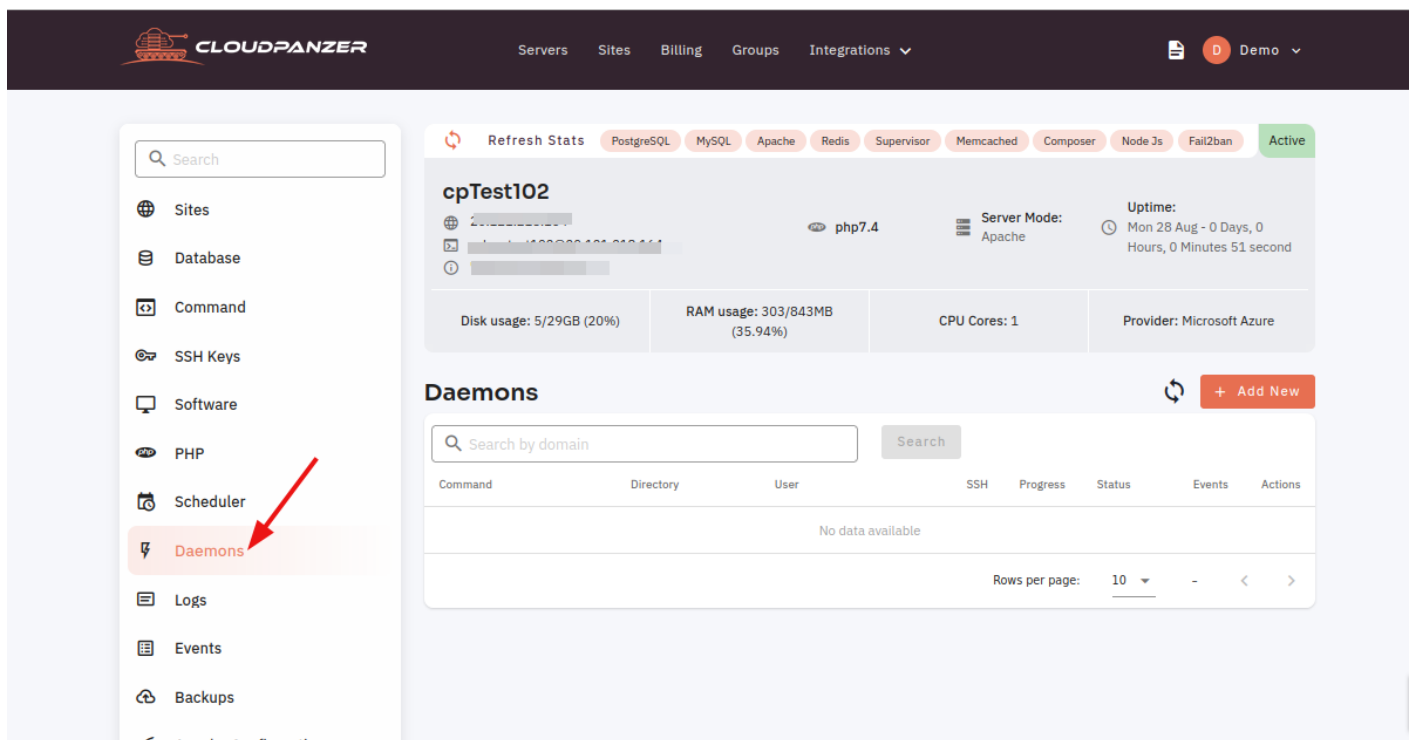

<https://www.youtube.com/embed/4HMDFG4r54k>

Follow the steps below to Start Daemon.

1: Once you are logged in, look for a "Server" and click on it.

2. Click on the daemons option.

3. Click on the menu icon.

How to show Daemon logs on a server through the CloudPanzer website?

Daemons are background processes that run on a computer, often to perform system-level tasks. These processes can sometimes generate logs that contain important information about their activity and any issues that may arise.

Prerequisites :

You must have an Active Server. You can jump to the tutorial section if the above conditions are proper, Or first follow the links below to set up the prerequisites.

How to install a Server

Tutorial :

You can watch the Video or Continue reading the post.

<https://www.youtube.com/embed/EwZneuaU74M>

Follow the steps below to show Daemon Logs.

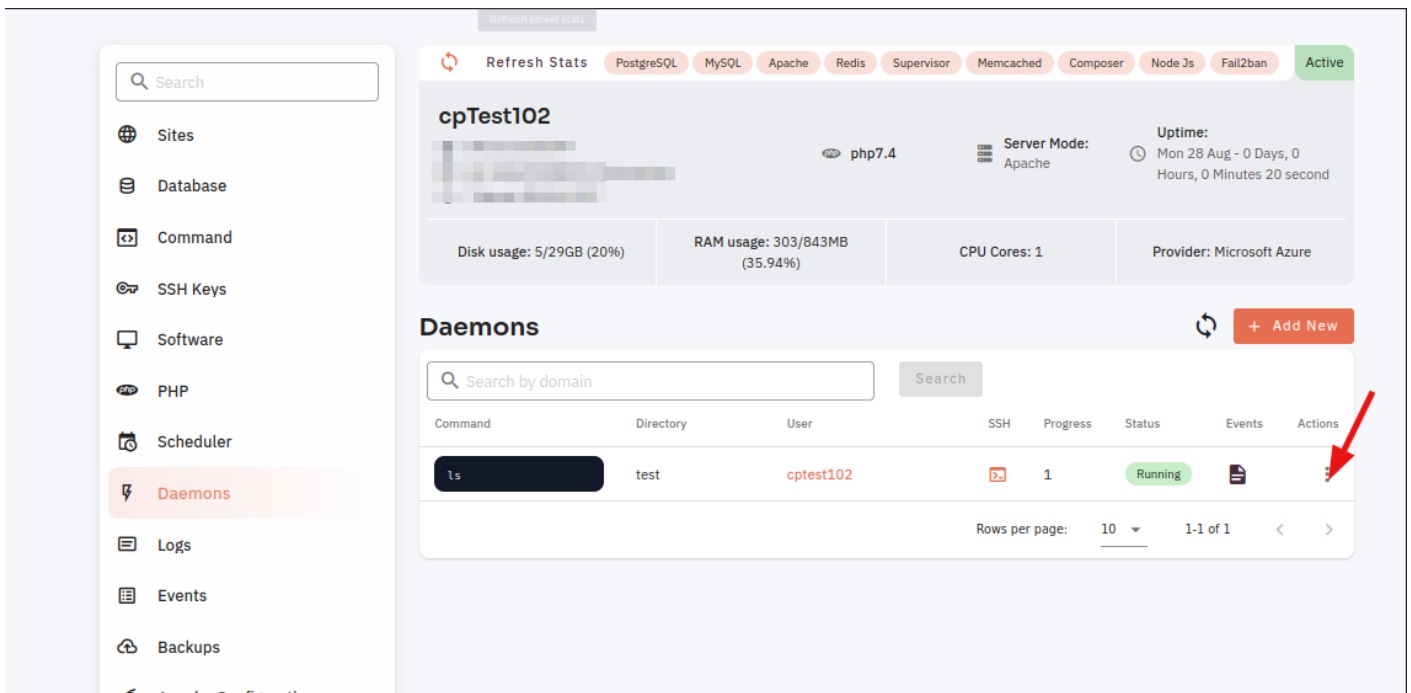

1. Once you are logged in, look for a "Server" and click on it.

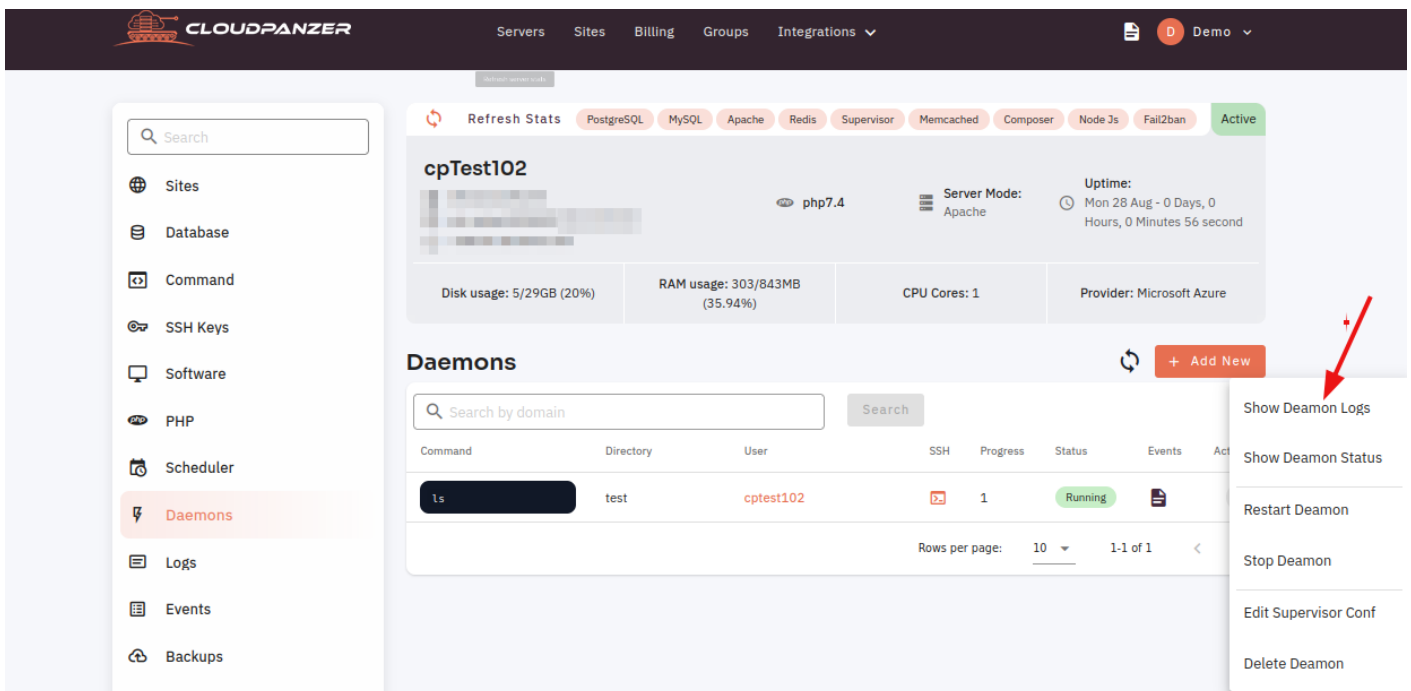

2. Click on the daemons option.

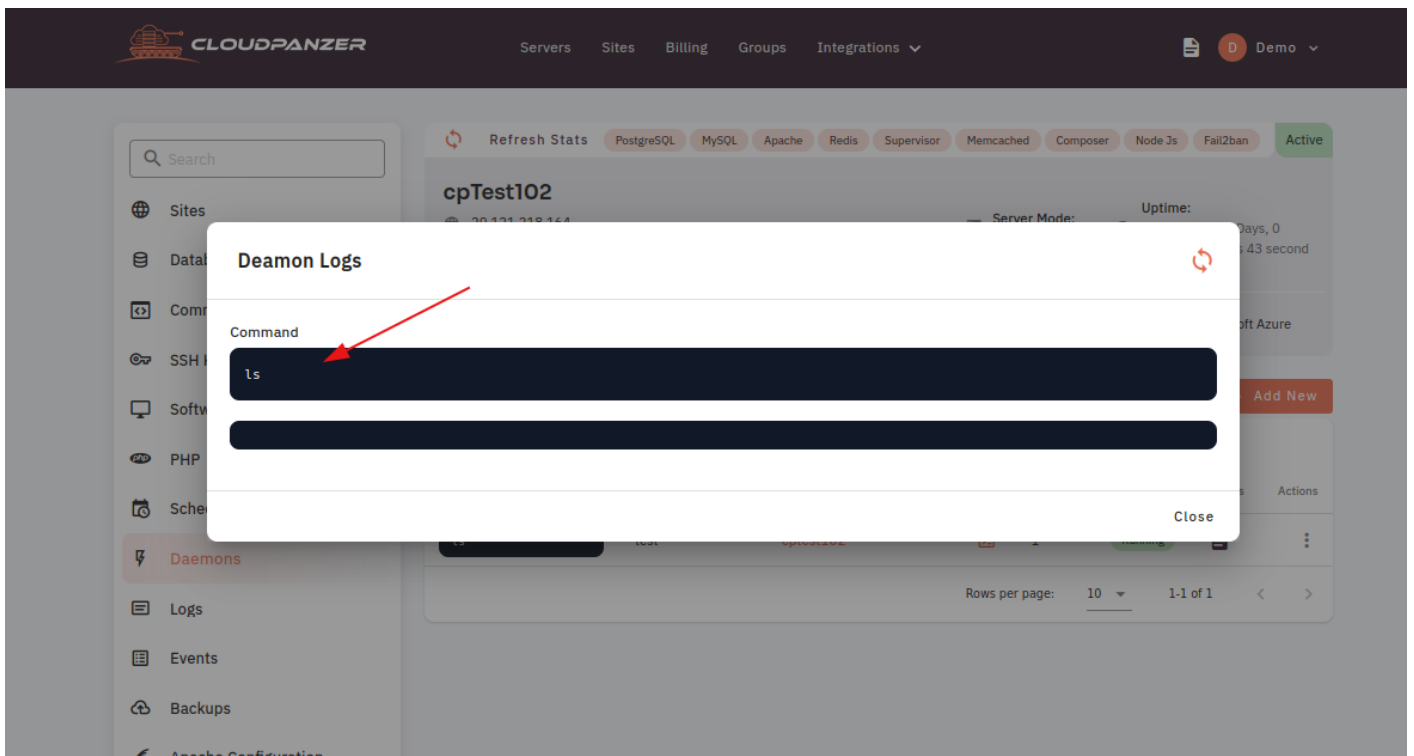

3. Click on the menu icon.

4. Click on the Show Daemon Logs.

Here, you can see the Daemon logs shown successfully.

How to show Daemon Status on a server through the CloudPanzer website?

There are several methods that can be used to display the status of a daemon on different operating systems. Whether you are using Linux, macOS, or Windows, there is a method available to check the status of your daemons and ensure that they are running as expected.

Prerequisites :

You must have an Active Server. You can jump to the tutorial section if the above conditions are proper, Or first follow the links below to set up the prerequisites.

How to install a Server

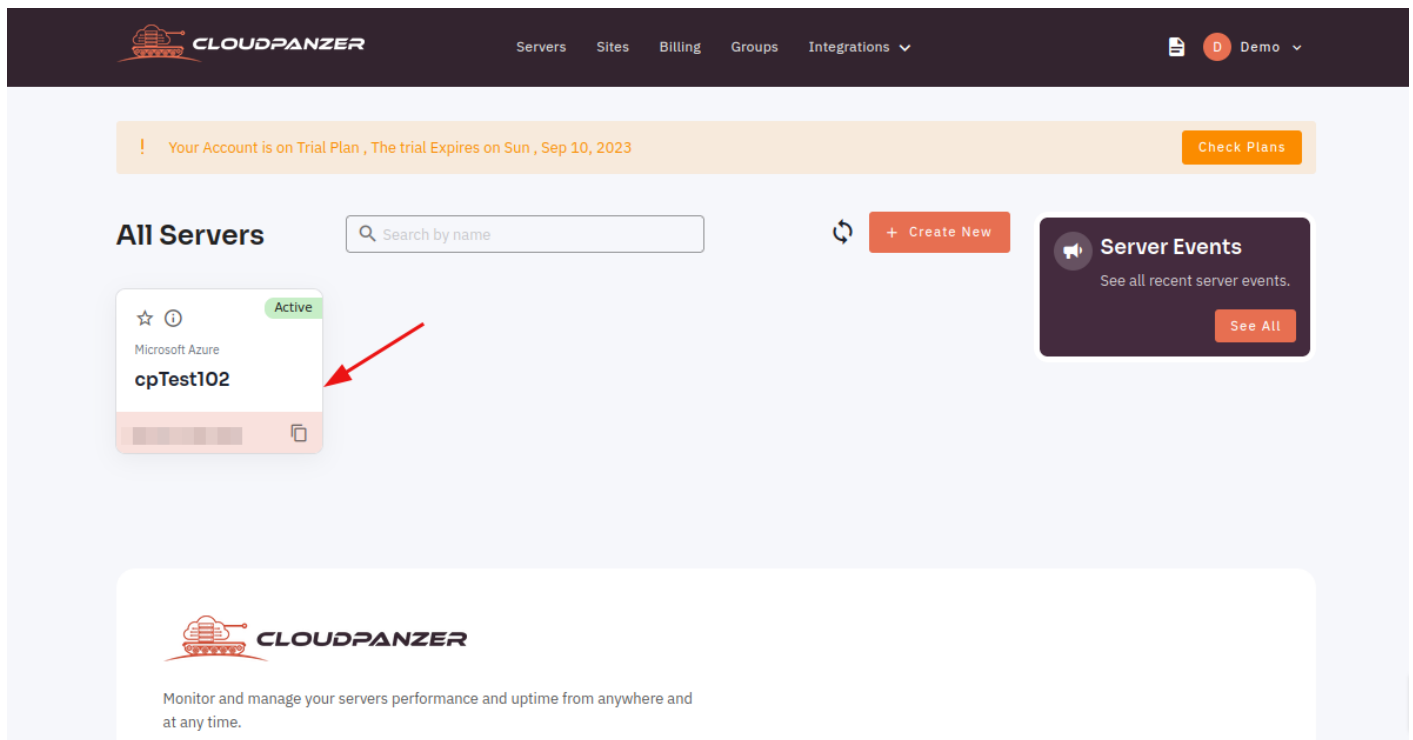

Tutorial :

You can watch the Video or Continue reading the post.

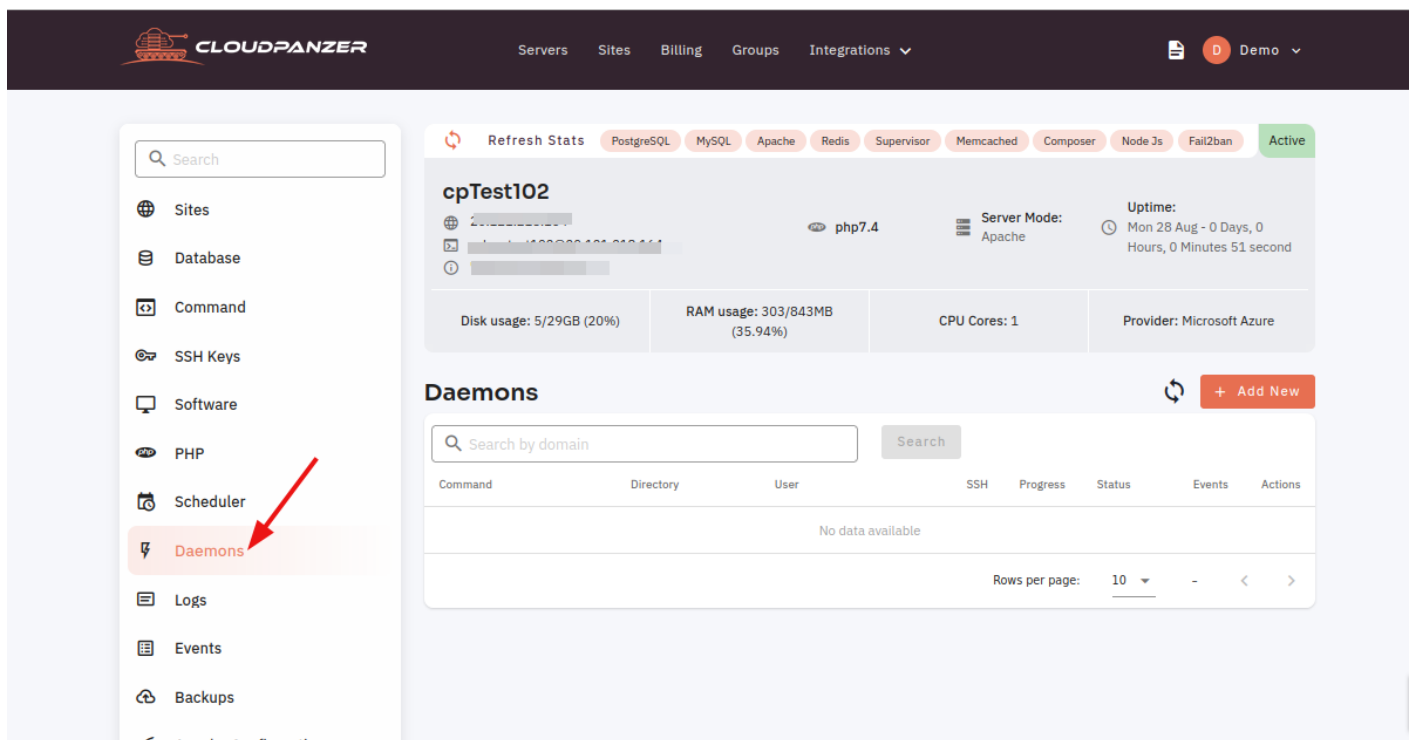

<https://www.youtube.com/embed/WkZGB7mrg9c>

Follow the steps below to Daemon Status.

1: Once you are logged in, look for a "Server" and click on it.

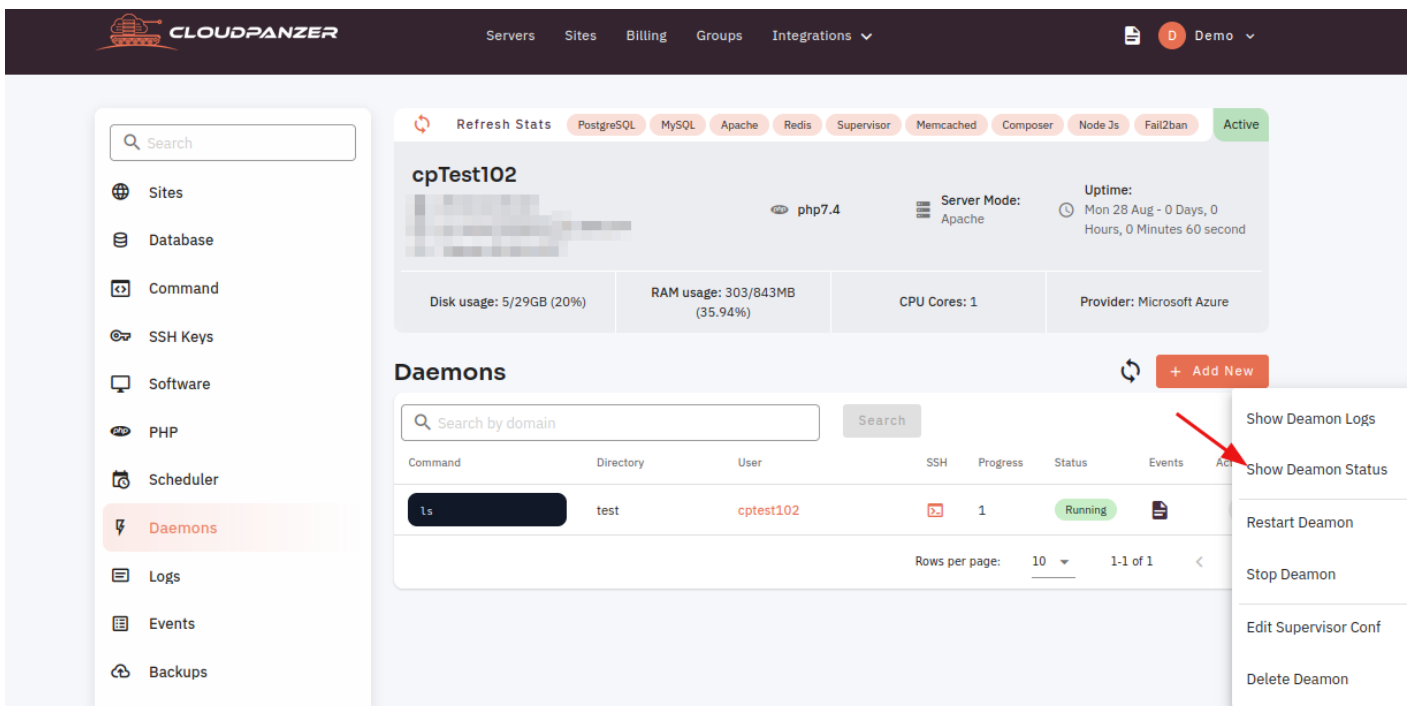

2. Click on the daemons option.

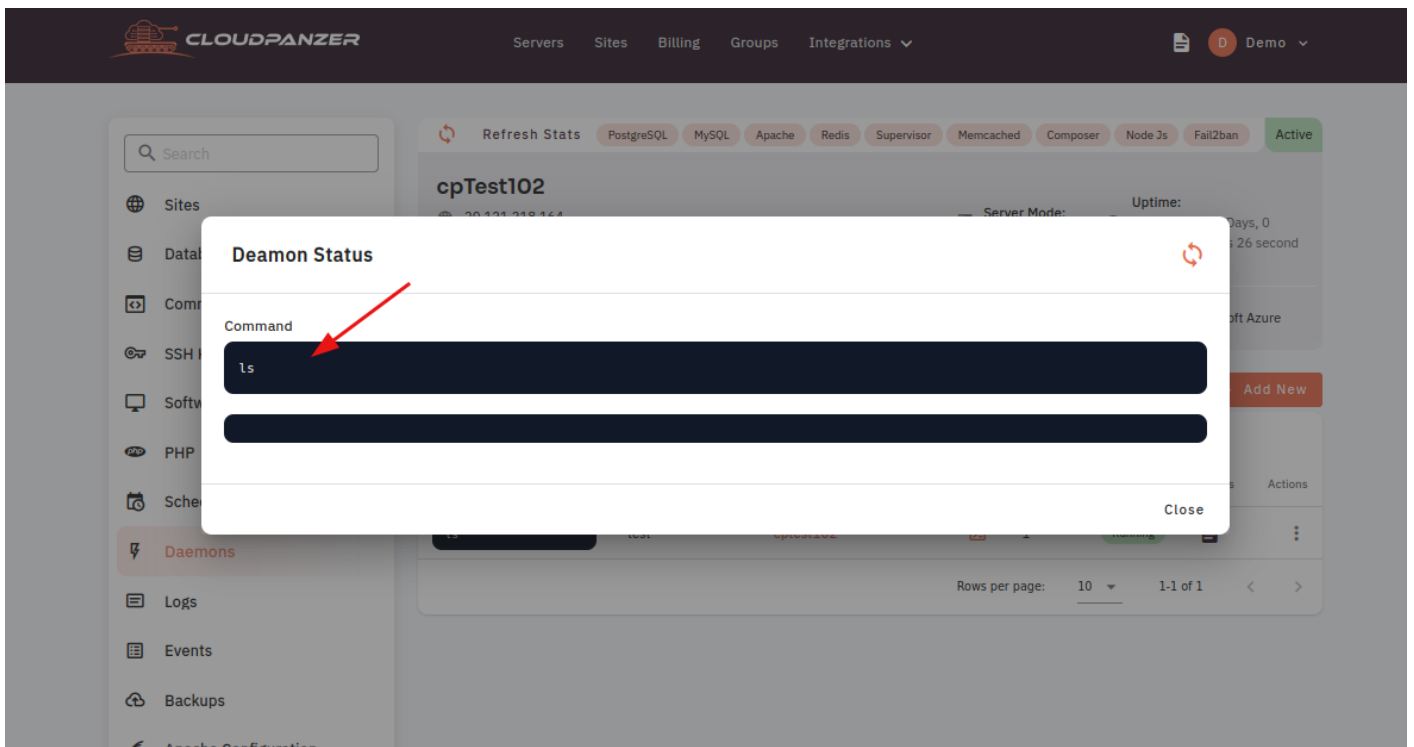

3. Click on the menu icon.

4. Click on the show Daemon status.

Here, you can see the Daemon Status shown successfully.

How to start a Daemon on a server through the CloudPanzer website?

Starting daemons on servers is necessary to enable background processes that deliver various services, such as handling web requests, managing databases, processing emails, or facilitating network communication. These daemons operate independently, supporting the server's core functions and allowing users to access resources and services efficiently.

Prerequisites :

You must have an Active Server. You can jump to the tutorial section if the above conditions are proper, Or first follow the links below to set up the prerequisites.

How to install a Server

Tutorial :

You can watch the Video or Continue reading the post.

<https://www.youtube.com/embed/3PfeH-LpDVo>

Follow the steps below to Start Daemon.

1. Once you are logged in, look for a "Server" and click on it.

2. Click on the daemons option.

3. Click on the menu icon.

The screenshot shows the CloudPanzer dashboard. On the left is a sidebar with navigation links: Sites, Database, Command, SSH Keys, Software, PHP, Scheduler, Daemons (highlighted), Logs, Events, Backups, and Apache Configuration. The main content area is titled 'cpTest102' and includes a 'Refresh Stats' button and a row of service tags: PostgreSQL, MySQL, Apache, Redis, Supervisor, Memcached, Composer, Node Js, Fail2ban, and an 'Active' status tag. Below this, server statistics are displayed: Disk usage: 5/29GB (20%), RAM usage: 303/843MB (35.94%), CPU Cores: 1, and Provider: Microsoft Azure. The 'Daemons' section features a search bar and a table with columns: Command, Directory, User, SSH, Progress, Status, Events, and Actions. A single daemon is listed with Command 'ls', Directory 'test', User 'cptest102', and Status 'Running'. A red arrow points to the Actions icon in the table row.

4. Click on the Start Daemon option.

This screenshot shows the same CloudPanzer dashboard, but the daemon's status is now 'Stopped'. A context menu is open over the Actions icon, displaying the following options: Show Deamon Logs, Show Deamon Status, Start Deamon (highlighted with a red arrow), Edit Supervisor Conf, and Delete Deamon. The rest of the dashboard layout remains identical to the previous screenshot.

Here, you can see the daemon started successfully.

How to stop a Daemon on a server through the CloudPanzer website?

Stopping a daemon, or background service can be an important task for managing your system. Identify the name of the daemon you want to stop. This can usually be found in the documentation or by using the `ps` command to list all running processes.

Prerequisites :

You must have an Active Server. You can jump to the tutorial section if the above conditions are proper, Or first follow the links below to set up the prerequisites.

How to install a Server

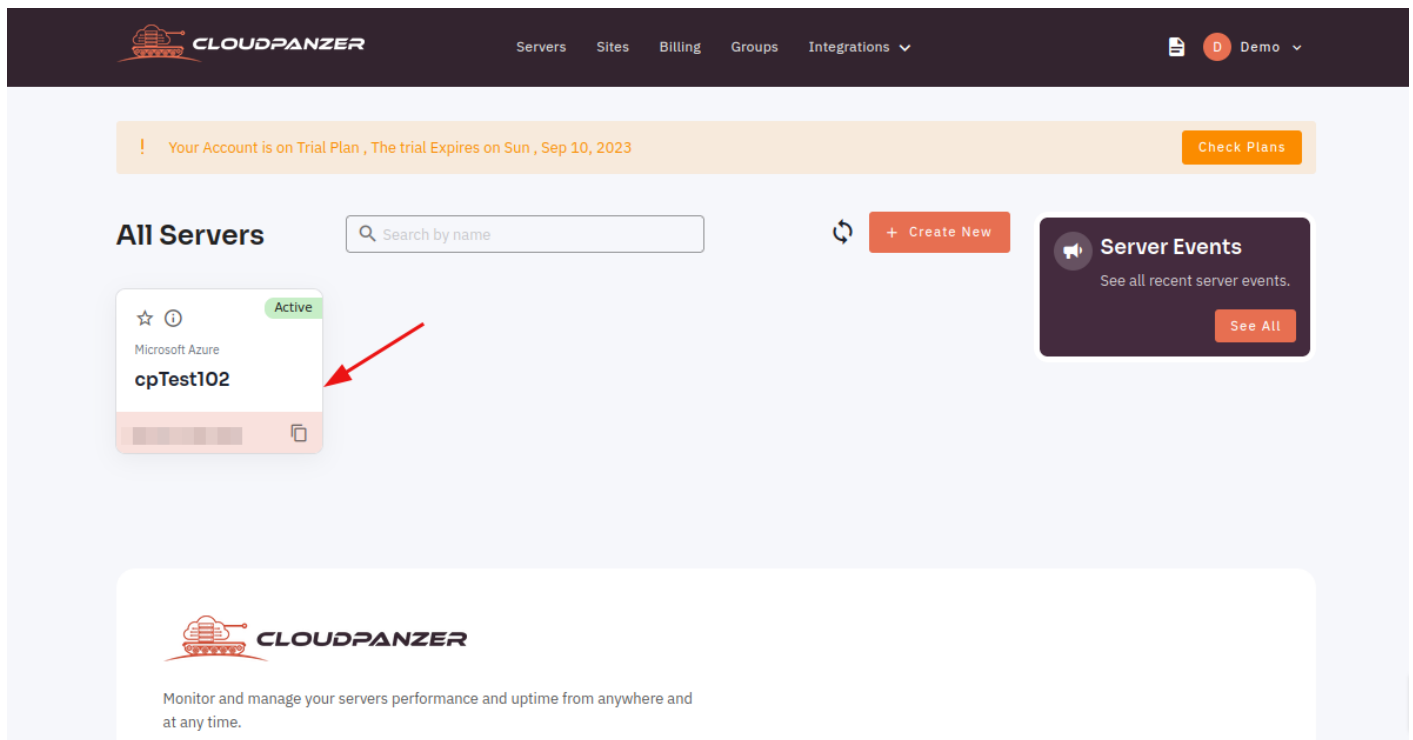

Tutorial :

You can watch the Video or Continue reading the post.

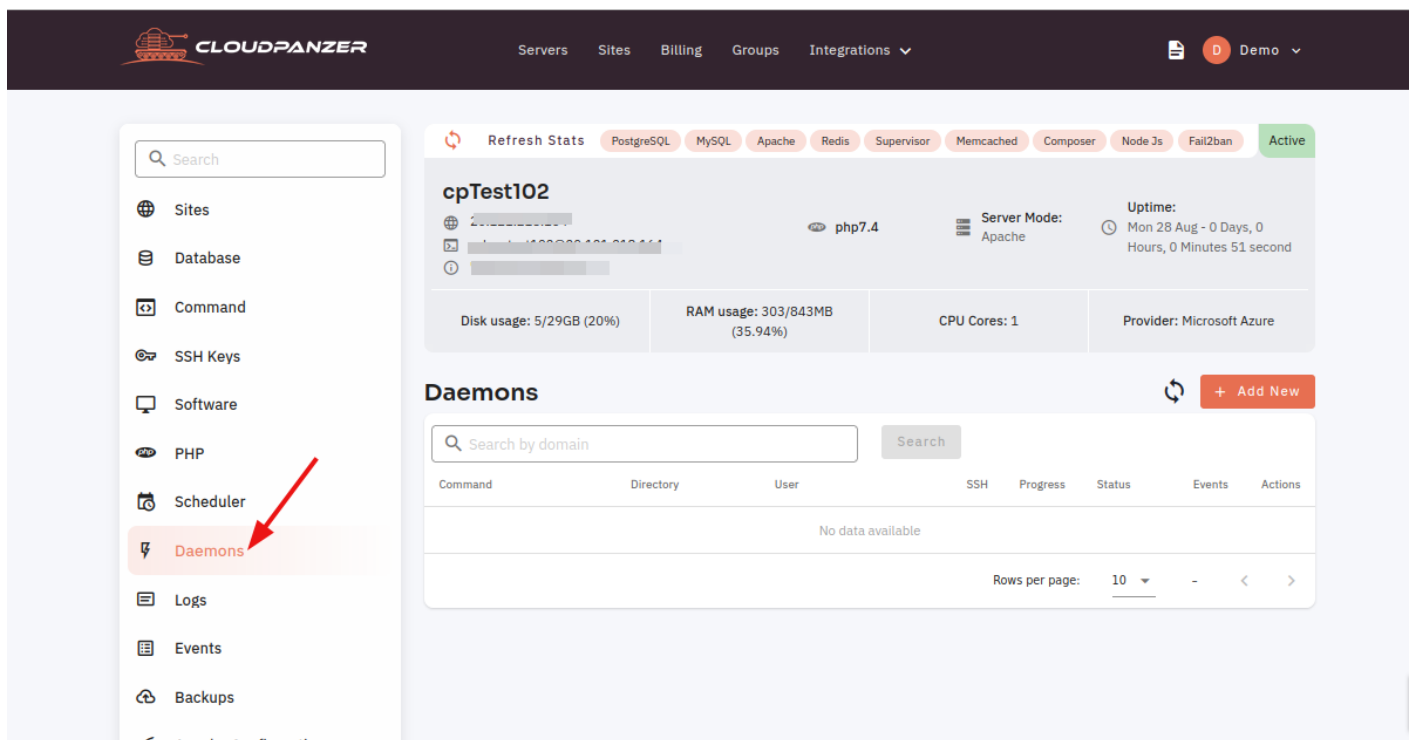

<https://www.youtube.com/embed/netKNtUR9w0>

Follow the steps below to Stop Daemon.

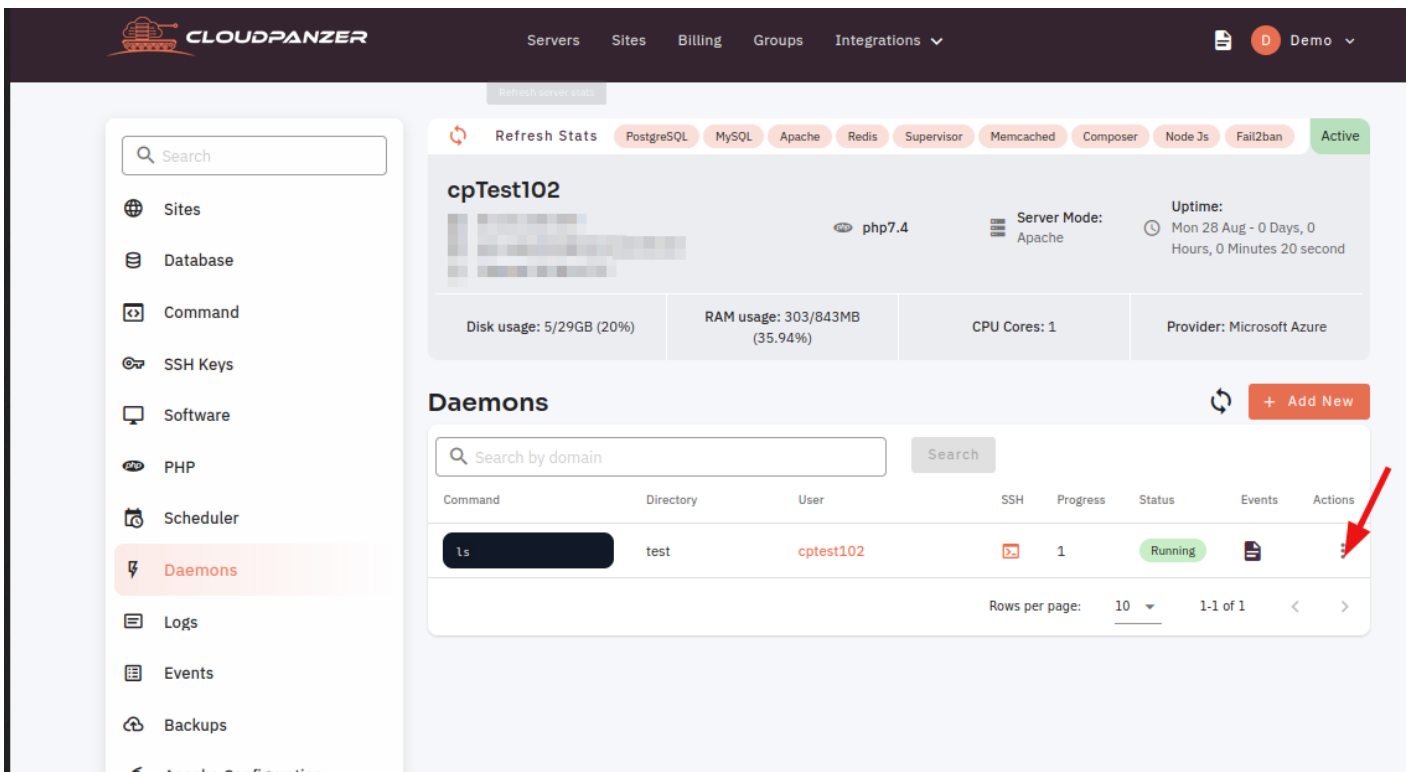

1. Once you are logged in, look for a "Server" and click on it.

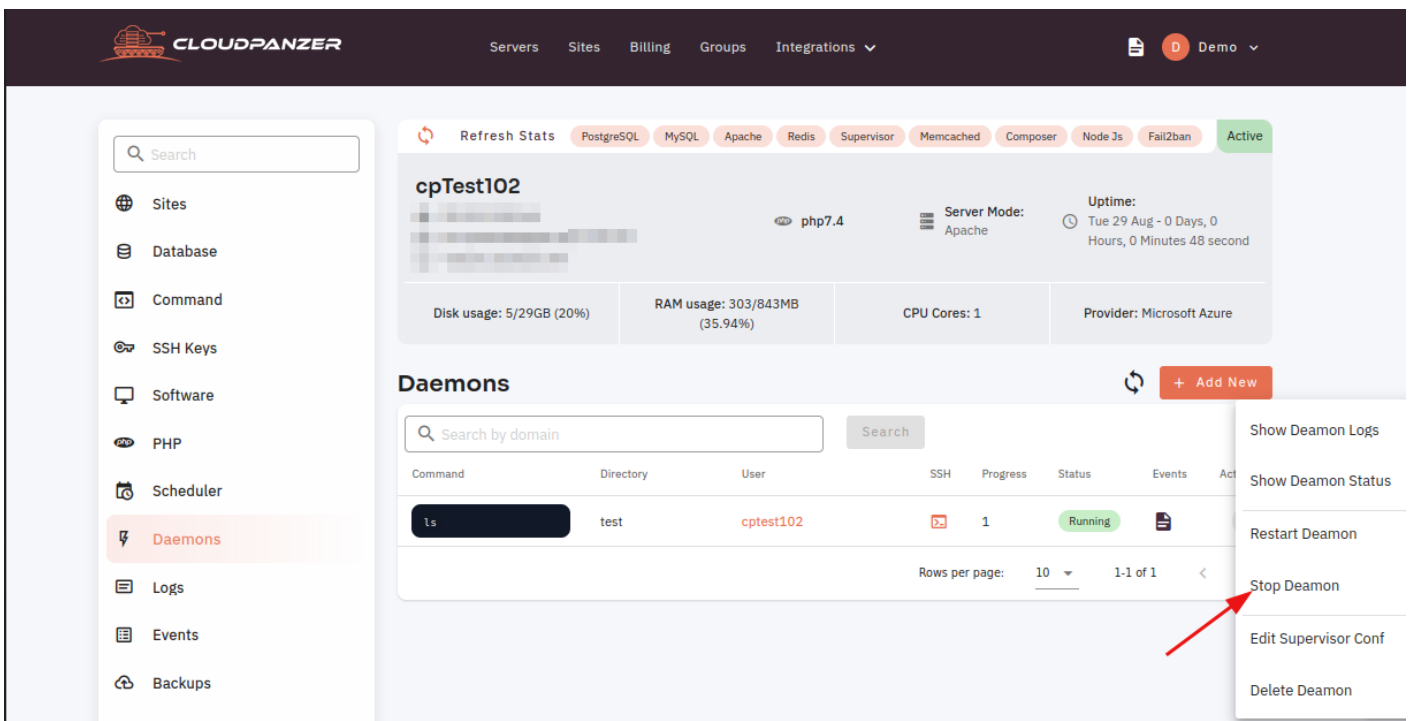

2. Click on the daemons option.

3. Click on the menu icon.

4. Click on the Stop Daemon.

Here, you can see the daemon stopped successfully.
