How to create Redirect Rules through the Cloudpanzer website?

Creating redirect rules can be a useful tool for managing your website and improving the user experience. A redirect is a way to send users and search engines to a different URL than the one they originally requested.

Prerequisites :

You must have an Active Server and Active Site. You can jump to the tutorial section if the above conditions are proper, Or first follow the links below to set up the prerequisites.

How to install a Server

How to Setup a Site

Tutorial :

You can watch the Video or Continue reading the post.

<https://www.youtube.com/embed/5sOP6vq5CqY>

Follow the steps below to Create Redirect Rules.

Navigate to the Redirect Rules

(Use this link to view How to Navigate).

5: Then, click on the Add New Button to create Redirect Rules.

The screenshot shows the CloudPanzer dashboard. On the left is a 'Site Tools' sidebar with a search bar and a list of tools: App, Environment, SSL, Redirects (highlighted), Events, Logs, Apache Configuration, PHP Configuration, Node.js Configuration, Shell Settings, and Password Management. The main area displays the configuration for 'demo2.testaccount.boats'. At the top, there's a 'Refresh Stats' button and an 'Installed' status. Below this, server details are shown: php8.2, Server Mode: Apache, Created At: 29-08-2023 - 10:52 am, Disk usage: N/A, SSH: ssh, and Basepath: /home/demo2testaccountboats /demo2.testaccount.boats/public. The 'Redirect Rules' section has a search bar and a table with columns: From, To, Type, Status, Events, and Actions. The table is currently empty with the message 'No data available'. A red arrow points to the '+ Add New' button in the top right corner of the Redirect Rules section.

6: Fill in all the fields and click on Save Changes Button.

This screenshot shows the 'Redirect Rule' modal form overlaid on the dashboard. The form has two input fields: 'From' with the value 'abc' and 'To' with the value 'abc2'. Below these is a 'Type' dropdown menu set to 'Temporary'. At the bottom right of the modal are two buttons: 'Close' and 'Save Changes'. A red arrow points to the 'Save Changes' button. The background shows the same dashboard as the first image, but it is dimmed.

Here, you can see the redirect Rule created successfully.

How to edit a Redirect Rules through the cloudpanzer website?

Redirect rules allow you to specify how a web server should respond when a user requests a specific page or resource. These rules can be used to redirect users to a new location or to display a specific page or resource in response to a request.

Prerequisites :

You must have an Active Server and Active Site. You can jump to the tutorial section if the above conditions are proper, Or first follow the links below to set up the prerequisites.
