

How to add Shell Aliases to the site on CloudPanzer?

By creating and adding shell aliases to your web server, you can streamline your workflow and work more efficiently. Whether you are a beginner or an experienced administrator, aliases can save you time and make it easier to work with the CLI. With a little bit of setup, you can customize your shell environment to suit your needs and work more effectively.

Prerequisites :

You must have an Active Server and Active site. You can jump to the tutorial section if the above conditions are proper, Or first follow the links below to set up the prerequisites.

Follow the steps below to add Shell Aliases

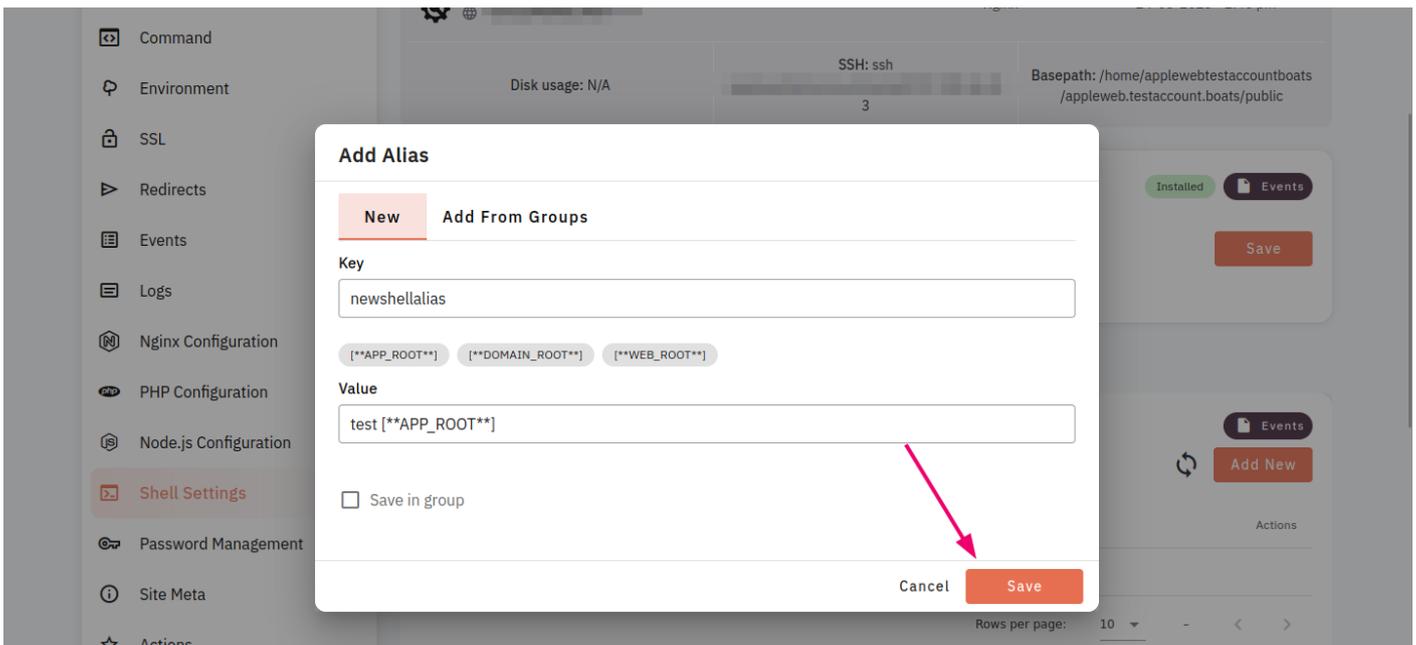

Navigate to the Shell Aliases

Use this link to view How to Navigate

4: Click on Add new button.

5: Fill in all fields and click on the save button.

Here, you can see the alias added successfully.

The screenshot displays a configuration page for shell settings. On the left is a sidebar menu with options like SSL, Redirects, Events, Logs, Nginx Configuration, PHP Configuration, Node.js Configuration, Shell Settings (highlighted), Password Management, Site Meta, and Actions. Below the sidebar is a 'Server Tools' section. The main content area is titled 'Shell Type' and includes an 'Installed' badge, an 'Events' button, and radio buttons for 'SH' and 'Bash' (selected). A 'Save' button is present. Below this is a 'Shell Aliases' section with tabs for 'Basic', 'Advance', and 'Groups'. It shows the file path '/home/applewebtestaccountboats/.bash_aliases' and an 'Add New' button. A table lists aliases with columns for Key, Value, Status, and Actions. One entry is shown: 'newshellalias' with the value 'test /home/applewebtestaccountboats/appleweb.testaccount.boats/public' and a 'Finished' status. A red arrow points to the 'Finished' status. At the bottom of the table, there are pagination controls: 'Rows per page: 10' and '1-1 of 1'.
