Follow the steps below to Change your Redis Password

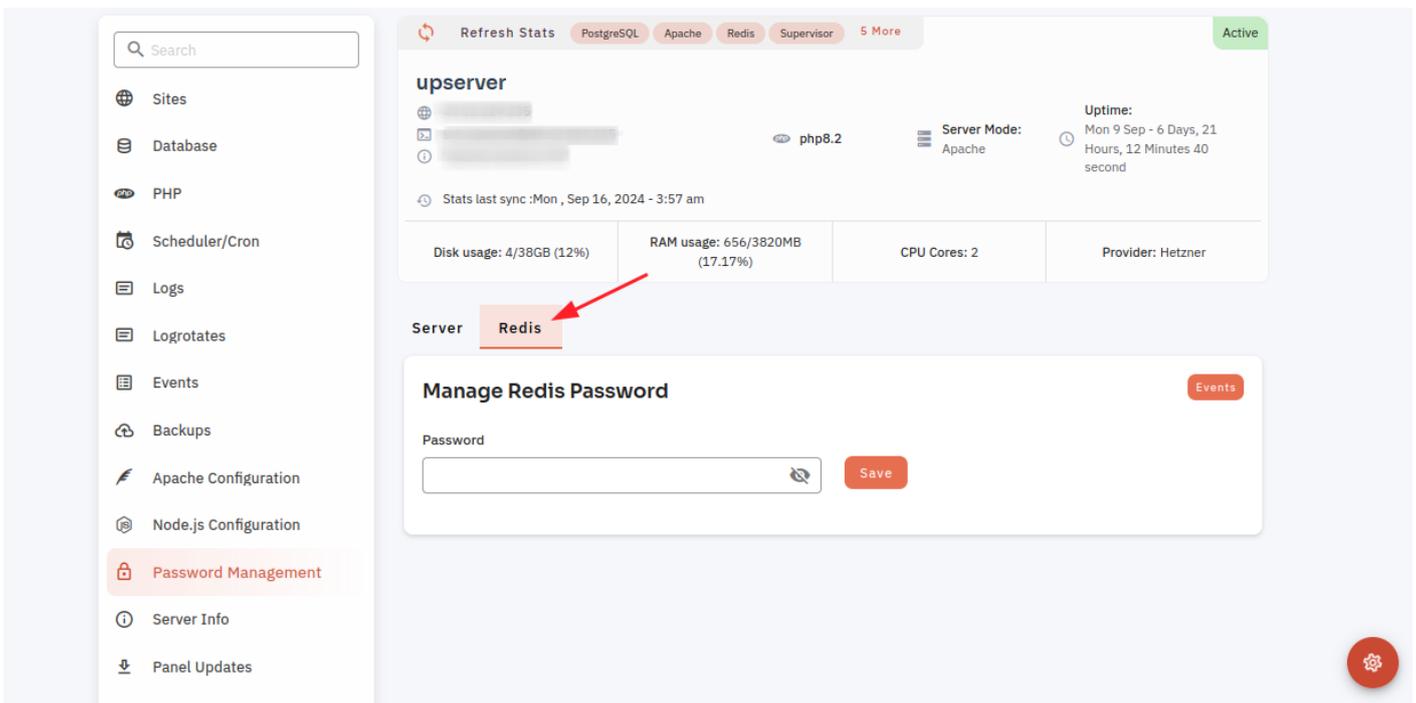

1: Once you are logged in, look for a "Server" and click on it.

2. Select the Database option.

3: Select the Redis option.

4: Fill in the field and click on the Save button.

The screenshot shows the upserver dashboard for a server named 'upserver'. The left sidebar contains navigation options: Sites, Database, PHP, Scheduler/Cron, Logs, Logrotates, Events, Backups, Apache Configuration, Node.js Configuration, Password Management (highlighted), Server Info, and Panel Updates. The main content area displays server statistics: Disk usage: 4/38GB (12%), RAM usage: 656/3820MB (17.17%), CPU Cores: 2, and Provider: Hetzner. Below this, the 'Redis' section is active, showing a 'Manage Redis Password' form. The form has a 'Password' input field with masked characters and a 'Save' button, which is pointed to by a red arrow. A 'Refresh Stats' button and a list of services (PostgreSQL, Apache, Redis, Supervisor, 5 More) are at the top. The server status is 'Active'.

Here, you can see Redis password was changed successfully.

This screenshot shows the upserver dashboard after the Redis password has been successfully changed. The 'Password Management' option in the sidebar remains highlighted. The main content area shows the same server statistics as the previous screenshot. In the 'Redis' section, the 'Manage Redis Password' form now displays a confirmation message: "Please store your password: qwerty123 in a secure place it will not be shown again." A red arrow points to this message. Below the message, the 'Password' input field is empty, and the 'Save' button is still visible. At the bottom of the form, a notification bar states "Request Submitted, This will take a few seconds to process" with a 'Close' button. The server status remains 'Active'.
