

# How to Change TLS Latest Version ?

Transport Layer Security (TLS) is a widely used protocol for securing communication over the internet. It is designed to prevent eavesdropping, tampering, and message forgery, and is used in a variety of applications, including email, web browsing, and online transactions.

## Tutorial :

**You can watch the Video or Continue reading the post.**

<https://www.youtube.com/embed/xnz-5On9pgw>

Follow the steps to Change to the TLS Latest Version.

**Navigate to the SSL/TLS of Cloudflare (Use this link to view How to Navigate).**

Here, you can "**Enable or Disable**" the Latest Version of TLS.

Host	Type	status	Expires on
*.testaccount.live,testaccount.live	universal	active	in 6 months(Managed)

Rows per page: 10 1-1 of 1 < >

### TLS 1.3

Enable the latest version of the TLS protocol for improved security and performance.

☐

### Opportunistic Encryption

Opportunistic Encryption allows browsers to benefit from the improved performance of HTTP/2 by letting them know that your site is available over an encrypted connection. Browsers will continue to show "http" in the address bar, not "https".

This setting was last changed 7 hours ago

☒

### Minimum TLS Version

Only allow HTTPS connections from visitors that support the selected TLS protocol version or newer.

TLS 1.2

### HTTP Strict Transport Security (HSTS)

Enforce web security policy for your website

☐
