

# How to check Server Apache Access logs through the cloudpanzer website?

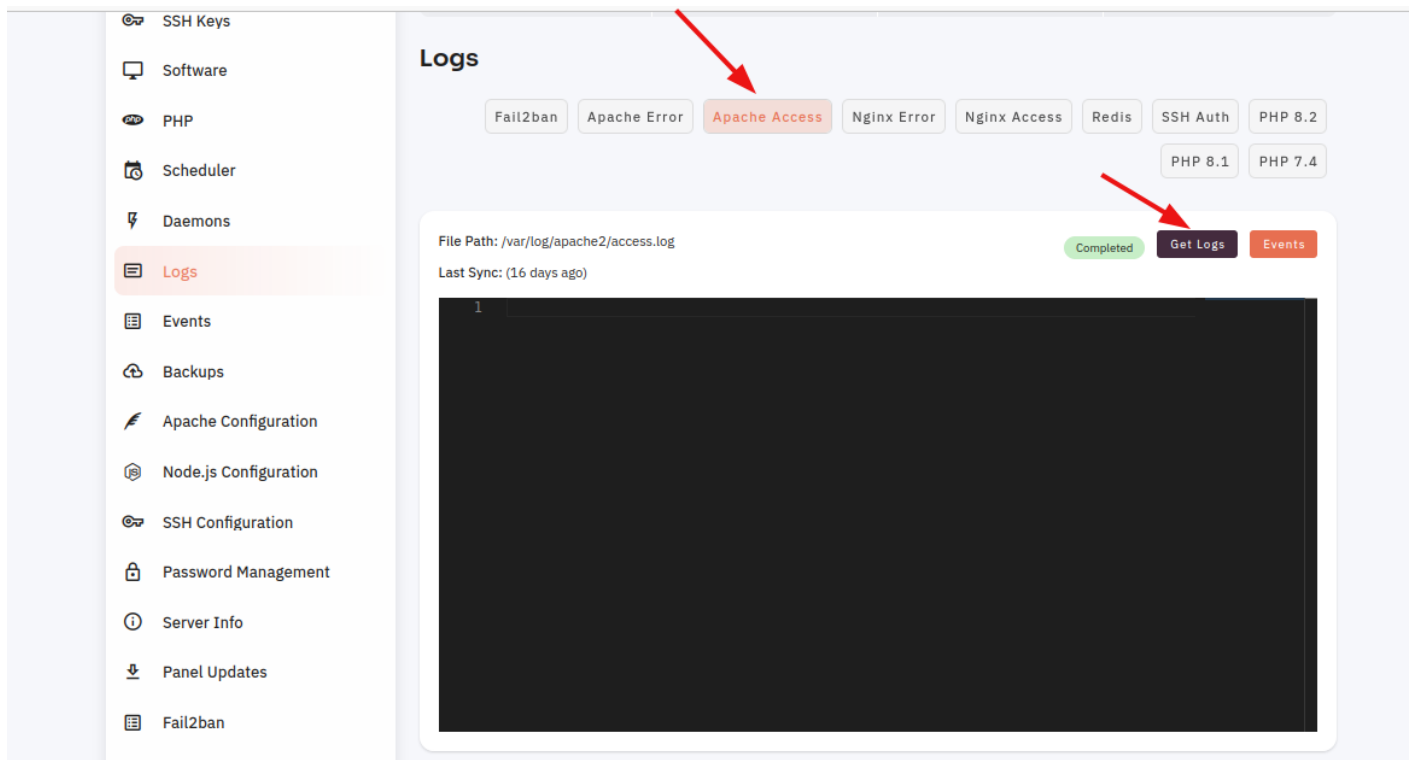

Checking the Apache access logs on your server is an important task for any website owner or developer. Apache is one of the most popular web servers on the internet, and its access logs contain valuable information about the traffic to your website.

Follow the steps below to check Apache Access logs.

## Navigate to the Server Logs

([Use this link to view How to Navigate](#)

3: Click on the Apache Access button then click on the Get Log button to see the logs.

Here, you can show the Error successfully.

The screenshot displays a server management dashboard with a sidebar on the left and a main content area on the right. The sidebar contains various system management options, with 'Logs' highlighted in red. The main content area is titled 'Logs' and features a horizontal menu of log categories: Fail2ban, Apache Error, Apache Access (selected), Nginx Error, Nginx Access, Redis, SSH Auth, PHP 8.2, PHP 8.1, and PHP 7.4. Below this menu, a log entry for '/var/log/apache2/access.log' is shown. A red arrow points to a green 'Completed' status indicator next to the log file path. To the right of the status indicator are two buttons: 'Get Logs' and 'Events'. The log content area is currently empty, showing only a line number '1'.
