

How to check Site Apache error logs through the cloudpanzer website?

If you are a website owner or a developer, it is important to monitor the Apache error logs of your website regularly. Apache is one of the most widely used web servers on the internet and its error logs contain valuable information about the performance and health of your website.

Follow the steps below to check the site Apache error logs.

Navigate to the Site Logs

(Use this link to view How to Navigate

5: Click on the Apache Error button then click on the Get Logs button to see the logs.

The screenshot displays the CloudPanzer website interface. On the left, a sidebar menu lists various settings and tools, with 'Logs' highlighted in orange. The main content area shows the 'Logs' section for a specific site. At the top, there are tabs for 'Apache Error', 'Apache Access', 'Nginx Error', 'Nginx Access', and 'Php'. The 'Apache Error' tab is selected and highlighted with a red arrow. Below the tabs, there is a 'File' path: '/home/demotestaccountboats/logs/demo.testaccount.boats/apache/error.log'. To the right of the file path, there are buttons for 'Completed', 'Get Logs', and 'Events'. The 'Get Logs' button is highlighted with a red arrow. Below the buttons, there is a large black rectangular area representing the log content.

Here, you can see the Complete successfully.

The screenshot displays the Cloudpanzer dashboard interface. At the top, the navigation bar includes the Cloudpanzer logo, menu items for Servers, Sites, Billing, Groups, and Integrations, and a user profile for John Doe. The main content area is divided into a left sidebar and a central panel. The sidebar, titled 'Site Tools', lists various management options: App, Command, Environment, SSL, Redirects, Events, Logs (highlighted), Nginx Configuration, and PHP Configuration. The central panel shows details for a site named 'appleweb.testaccount.bo...'. It includes a 'Refresh Stats' button, a status indicator 'N/A', and site configuration details such as 'php8.1', 'Server Mode: Nginx', and 'Created At: 24-05-2023 - 1:40 pm'. Below this, there are sections for 'Disk usage: N/A', 'SSH: ssh' with a progress bar, and 'Basepath: /home/applewebtestaccountboats /appleweb.testaccount.boats/public'. The 'Logs' section is active, showing a filter for 'Apache Error' and buttons for 'Apache Access', 'Nginx Error', 'Nginx Access', and 'Php'. The log entry for the file '/logs/appleweb.testaccount.boats/apache/error.log' shows a 'Last Sync: (a few seconds ago)' and a 'Completed' status, which is highlighted by a red arrow. There are also buttons for 'Get Logs' and 'Events'.
