

How to check Site php logs through the cloudpanzer website?

If you're having issues with your PHP-based website, one of the first places you should look for clues is the PHP logs. These logs can provide valuable information about any errors or issues that are occurring on your site, as well as help you troubleshoot and fix any problems.

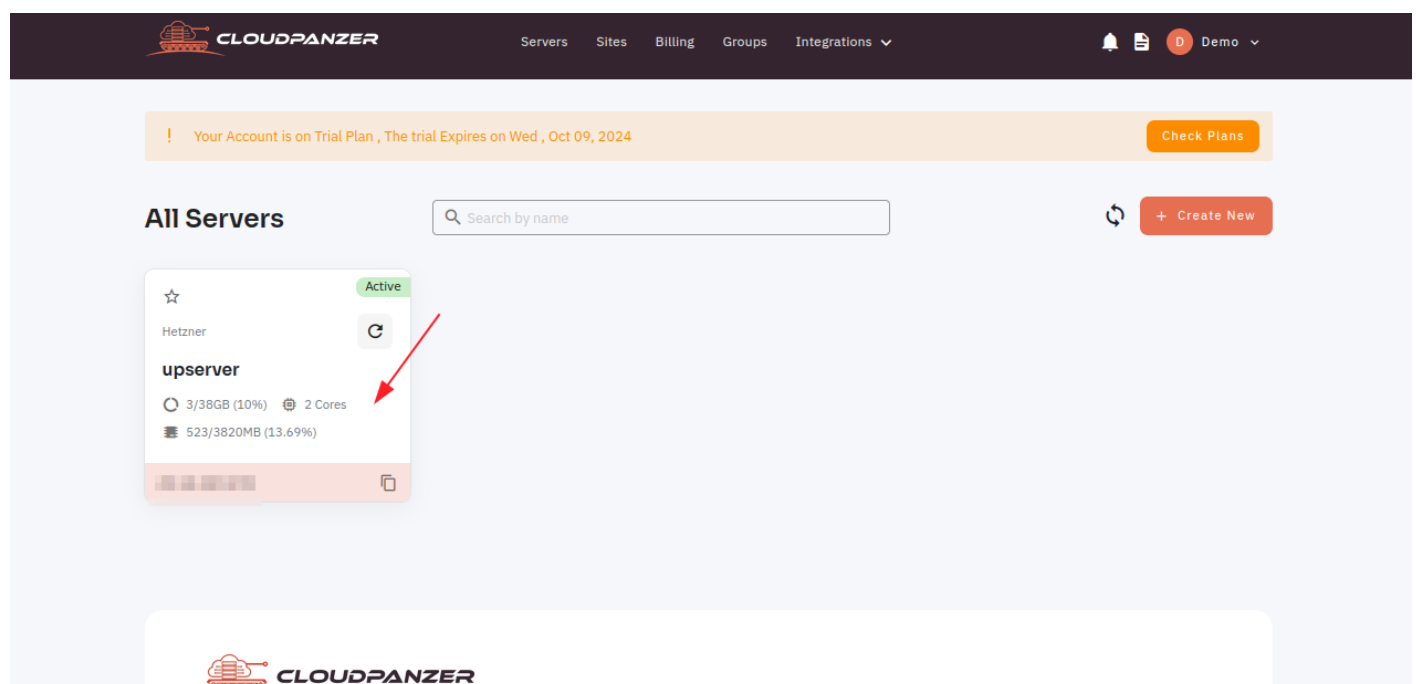

Tutorial :

You can watch the Video or Continue reading the post.

Follow the steps below to check php logs site

1. Select Server of your choice.

2. Select the Sites option.

The screenshot shows the Cloudpanzer dashboard. In the left sidebar, the 'Sites' option is highlighted with a red arrow. The main content area displays the 'upserver' status, including uptime, disk usage, RAM usage, CPU cores, and provider. Below this, there is a section for 'Active Sites' with a search bar and a table listing active sites.

Domain	App	PHP	Status	User	SSH	Isolated	Events
apple.testaccountboats	php8.2	Installed	appletestaccountboats	Yes	Yes		
newsite.testaccount.boats	php8.3	Installed	newsitetestaccountboats	Yes	Yes		

3. Select the Active site. Click on the Logs Option.

The screenshot shows the Cloudpanzer dashboard. In the left sidebar, the 'Logs' option is highlighted with a red arrow. The main content area displays the 'upserver' status and a table of 'Active Sites'. A red arrow points to the 'apple.testaccountboats' row in the 'Active Sites' table, indicating the selected site.

Domain	App	PHP	Status	User	SSH	Isolated	Events
apple.testaccountboats	php8.2	Installed	appletestaccountboats	Yes	Yes		
newsite.testaccount.boats	php8.3	Installed	newsitetestaccountboats	Yes	Yes		

4. Click on the PHP button.
