

How to configure Fix Ownership and Fix file Permissions on site app through the cloudpanzer website?

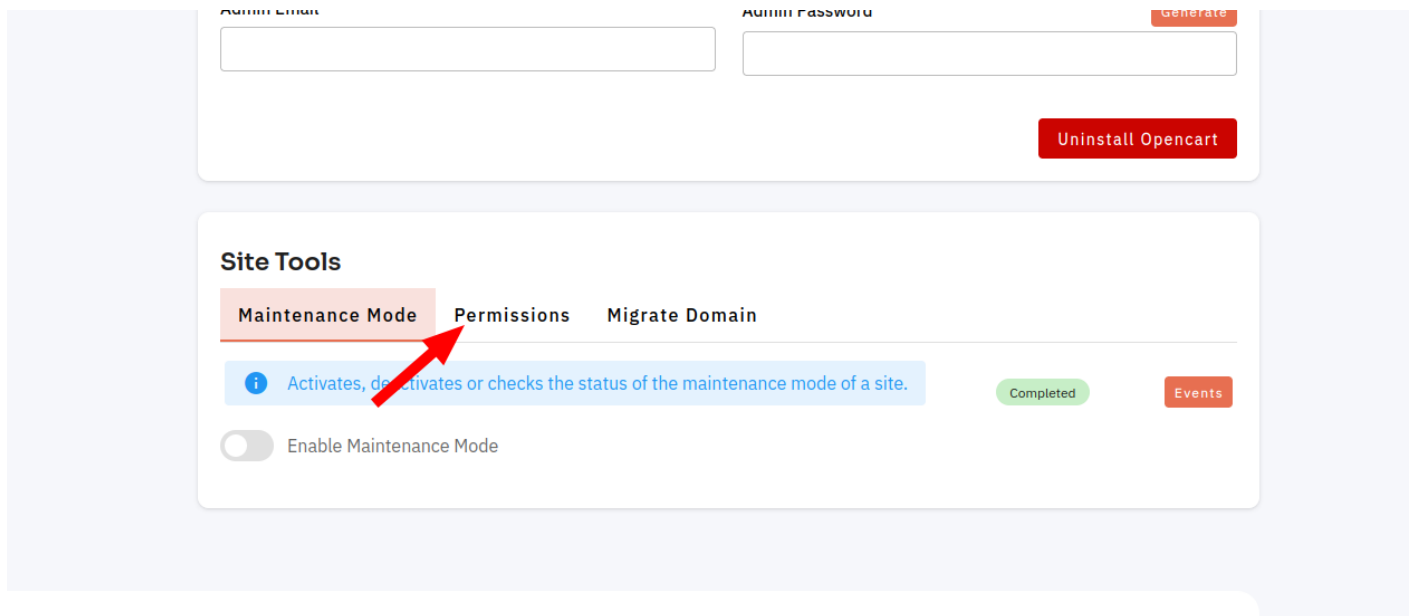

Checksums in a WordPress website are cryptographic codes generated for files like themes, plugins, and the core software. These codes serve as a security measure to verify file integrity. Users can compare these checksums to ensure that files haven't been tampered with or corrupted during download or installation, reducing security risks.

Follow the steps below to configure Fix Ownership and Fix File Permissions

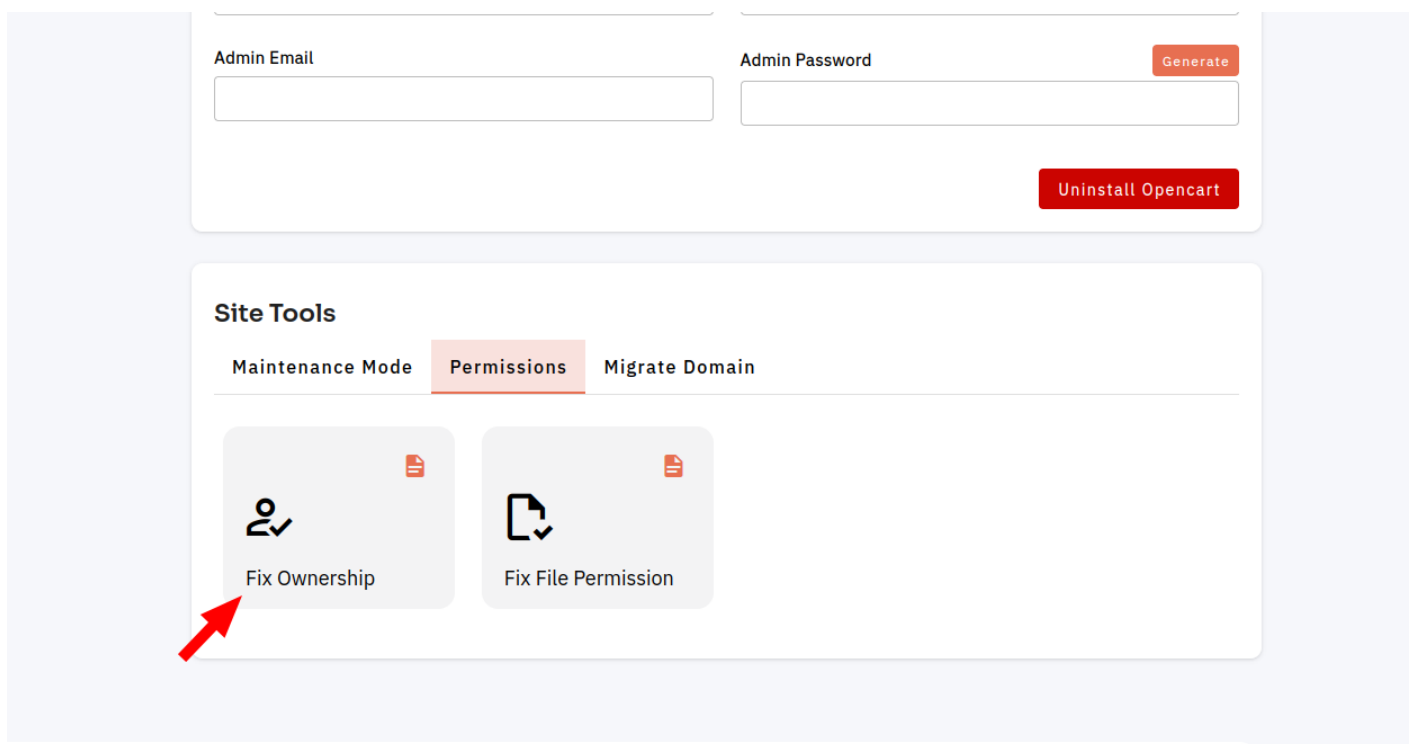

Navigate to the app from the Dashboard

Use this link to view How to Navigate

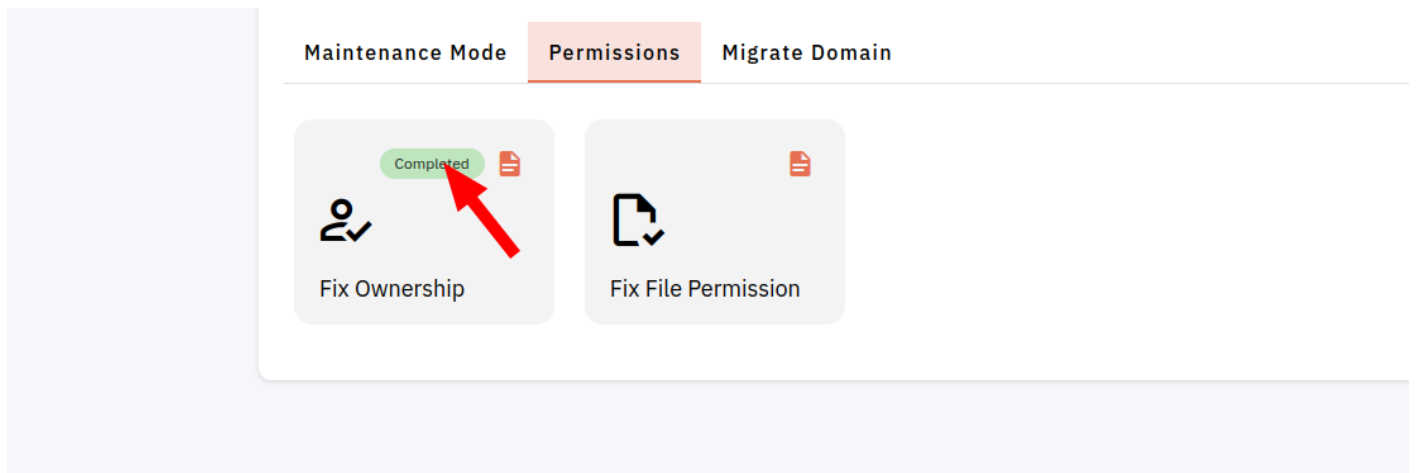

1. Click on Permissions.

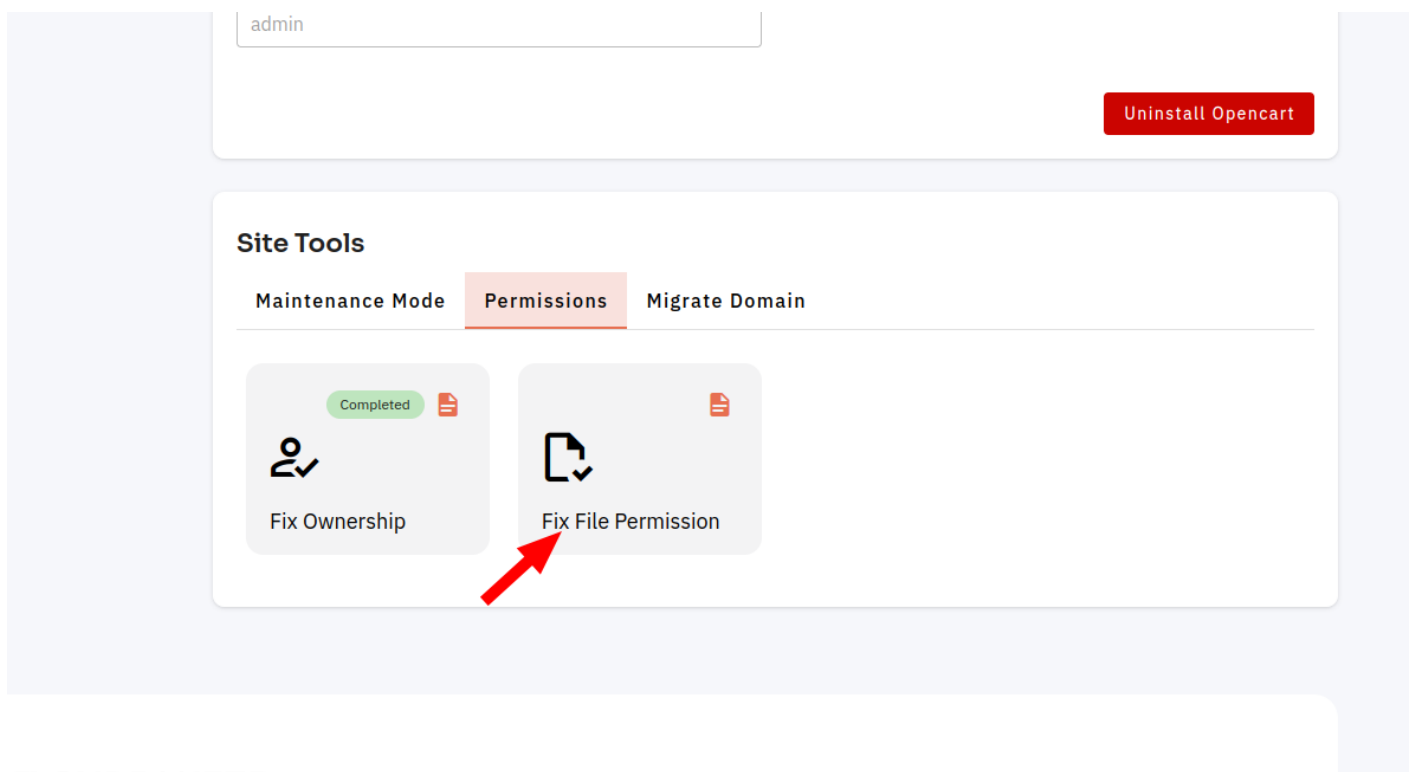

2. Click on the Fix OwnerShip card.

Here, you can see the Fix OwnerShip app installation was successful.

3. Click on the Fix File Permission card.

Here, you can see the Fix File Permission app installation was successful.
