

How to create Daemons on a server through the CloudPanzer website?

A daemon is a type of background process that runs on a computer and performs tasks without user intervention. Daemons are often used to perform system-level tasks, such as scheduling jobs, managing network connections, or monitoring system resources.

Prerequisites :

You must have an Active Server. You can jump to the tutorial section if the above conditions are proper, Or first follow the links below to set up the prerequisites.

How to install a Server

Tutorial :

You can watch the Video or Continue reading the post.

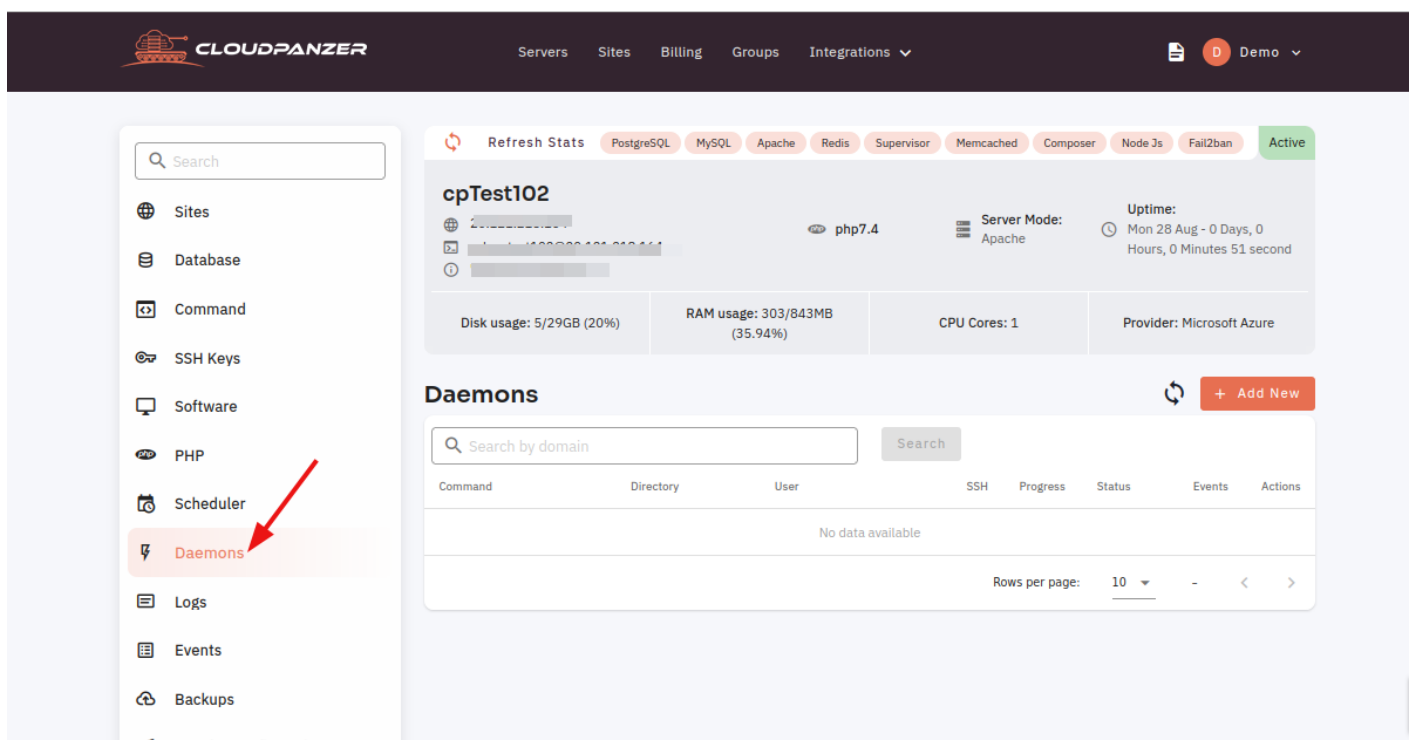

<https://www.youtube.com/embed/Mg5w2EBm5-w>

Follow the steps below to create a Daemon.

1. Once you are logged in, look for a "Server" and click on it.

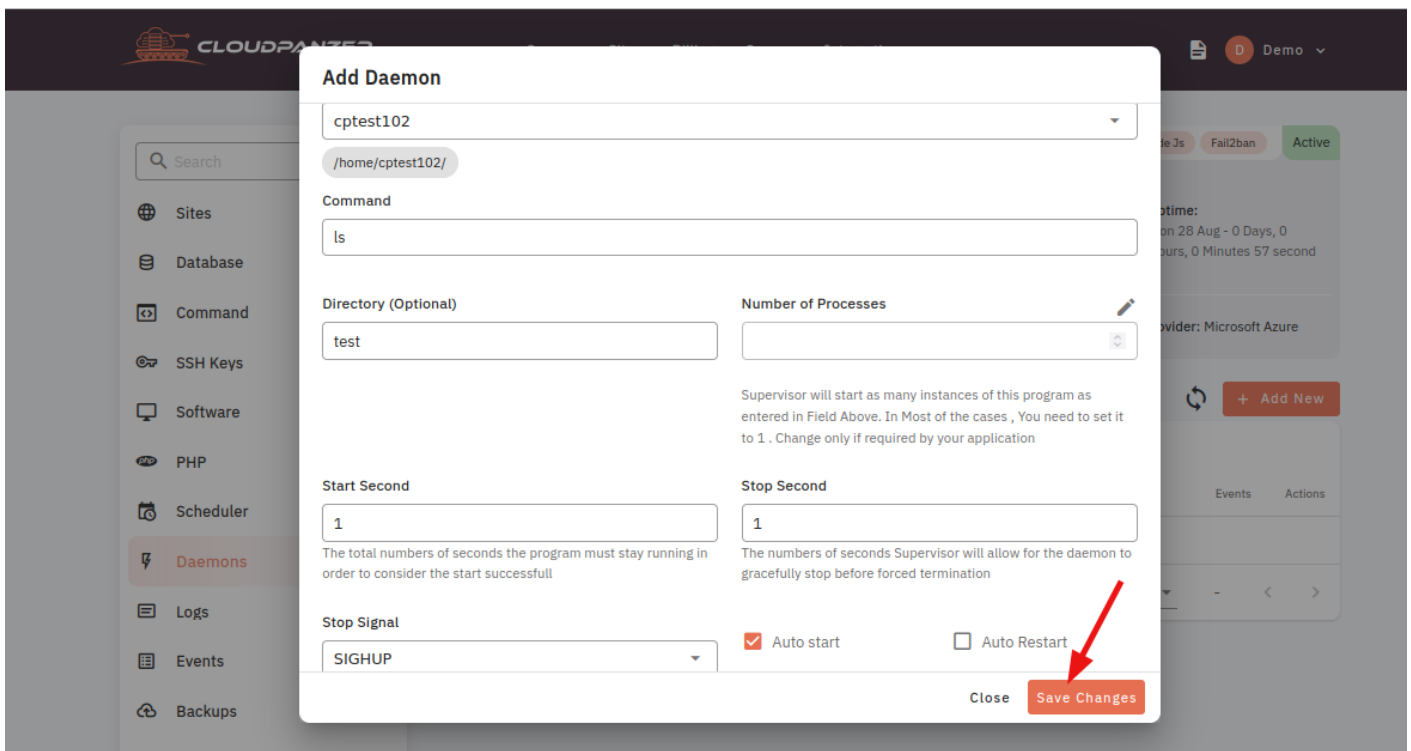

2. Click on the daemons option.

3. Click on the add new button.

4. Enter the required data and click on the save changes button.

Here, you can see the Daemon was created successfully.

The screenshot shows the CloudPanzer dashboard. The top navigation bar includes links for Servers, Sites, Billing, Groups, and Integrations. The main content area displays server details for 'cpTest102', including its IP address, PHP version (7.4), server mode (Apache), and uptime. Below this, resource usage is shown: Disk usage (5/29GB), RAM usage (303/843MB), CPU Cores (1), and Provider (Microsoft Azure). The 'Daemons' section features a search bar and a table with columns for Command, Directory, User, SSH, Progress, Status, Events, and Actions. A red arrow points to the 'ls' command in the first row of the table. The left sidebar contains a search bar and a list of navigation items: Sites, Database, Command, SSH Keys, Software, PHP, Scheduler, Daemons (highlighted), Logs, Events, and Backups.

Command	Directory	User	SSH	Progress	Status	Events	Actions
ls	test	cpTest102		1	Running
