

# How to disable Scheduler through the cloudpanzer website ?

Disabling a scheduler is not a permanent action and you can be undone. Make sure you want to delete the scheduler before proceeding.

## Prerequisites :

You must have an Active Server. You can jump to the tutorial section if the above conditions are correct, or first follow the links below to set up the prerequisites.

## How to install a Server

## Tutorial :

**You can watch the Video or Continue reading the post.**

<https://www.youtube.com/embed/uLet-dMWQ9E>

Follow the steps below to disable the Scheduler

## Navigate to the Scheduler

**(Use this link to view How to Navigate**

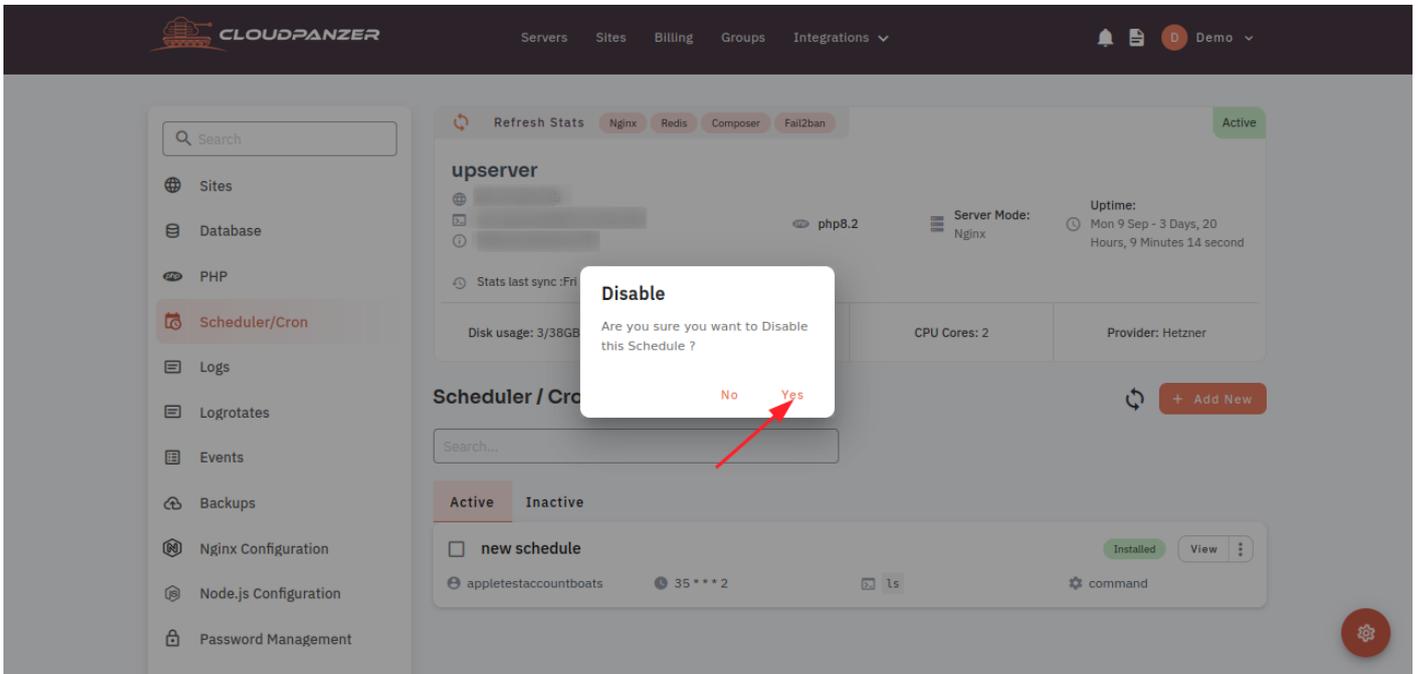

3. Click on the Menu icon.

The screenshot shows the Cloudpanzer interface. On the left is a navigation sidebar with options like Sites, Database, PHP, Scheduler/Cron (highlighted), Logs, Logrotates, Events, Backups, Nginx Configuration, Node.js Configuration, Password Management, and Server Info. The main content area is titled 'Scheduler / Cron' and features a search bar, 'Active' and 'Inactive' tabs, and a '+ Add New' button. A table lists cron jobs, with one entry 'new schedule' highlighted. A dropdown menu is open for this entry, showing options: 'View Events', 'Edit', and 'Disable'. A red arrow points to the 'Disable' option. Above the table, server statistics for 'upserver' are shown, including disk usage (3/38GB), RAM usage (594/3820MB), CPU Cores (2), and Provider (Hetzner). A red gear icon is visible in the bottom right corner.

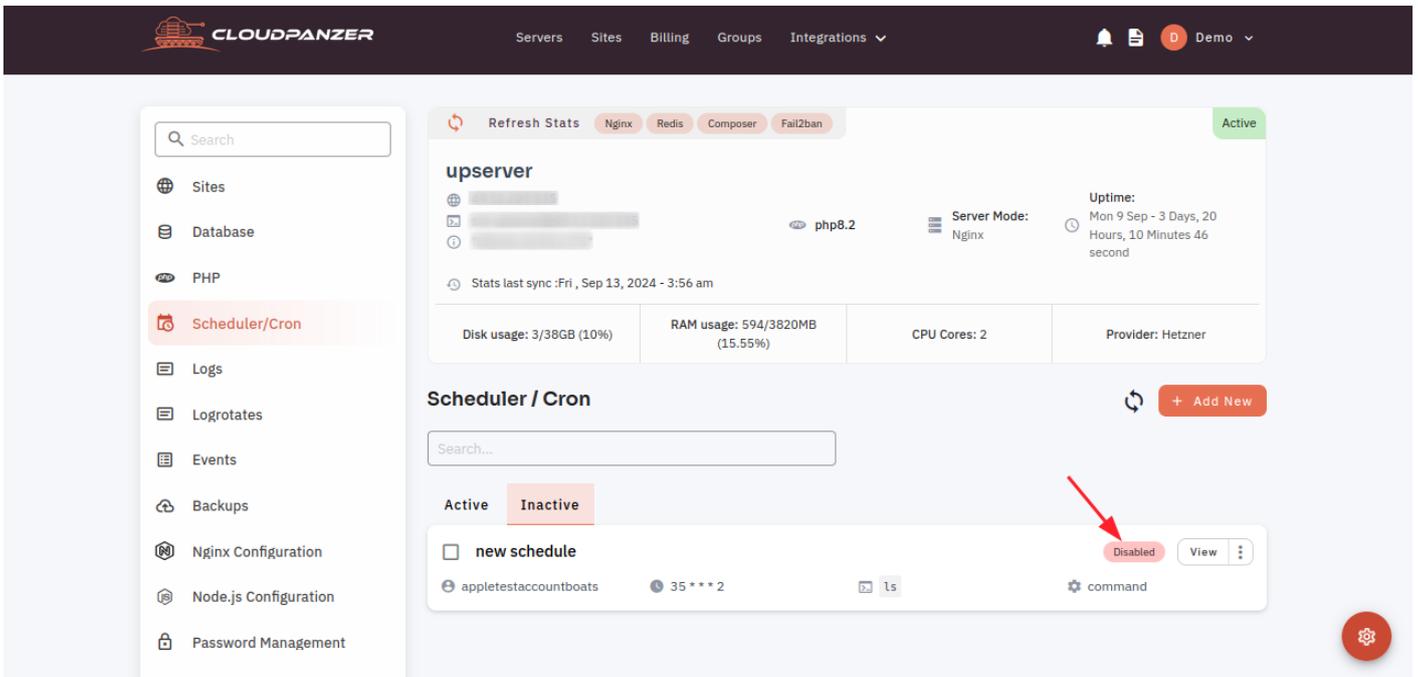

4. Select the Disable Option.

This screenshot is similar to the previous one, showing the same 'Scheduler / Cron' interface. The dropdown menu for the 'new schedule' cron job is still open, but now the 'Disable' option is highlighted with a red arrow. The 'View Events' and 'Edit' options are also visible. The rest of the interface, including the sidebar and server statistics, remains the same.

5. Click on the Yes Button.

Here, you can see the Scheduler disabled Successfully.
