

How to Disable Site Protection through the cloudpanzer website?

To disable something means to turn it off or deactivate it so that it is no longer functional or able to be used.

Tutorial :

You can watch the Video or Continue reading the post.

Follow the steps below to Disable the app.

Navigate to the app from Dashboard (Use this link to view How to Navigate)

1. Click on the Disable Button.

The screenshot shows the CloudPanzer dashboard interface. On the left is a navigation menu with items like Environment, SSL, Redirects, Events, Logs, Nginx Configuration, PHP Configuration, Shell Settings, and Actions. The main content area is titled 'Site App' and shows the configuration for an 'Opencart' application. A red box highlights the 'Opencart' app icon, and a red arrow points to the 'Disable' button. The 'Uninstall Protection' section is visible, indicating that protection is currently enabled. Below this, the 'Install Opencart' section shows the application is installed, with database user and database fields.

2. Enter the OTP and click on the Verify button.

Here, you can see the Disabled app was successful.
