

How to Edit Site Environment Path in CloudPanzer?

In the context of a domain, "site environment" refers to the digital or online aspects of a website or web application, including hosting, design, content, security, performance, and user experience. It encompasses everything related to the domain's online presence and functionality.

Follow the steps below to Edit the Site Environment Path

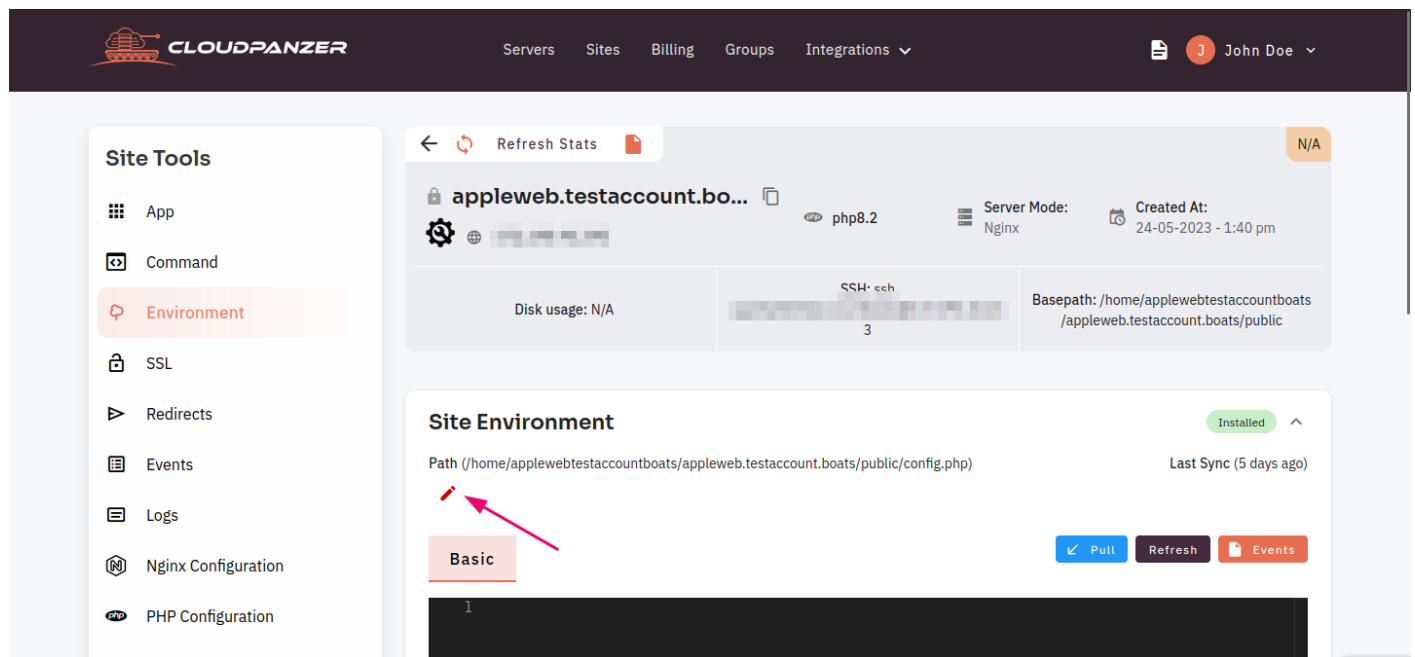

Navigate to the Site Environment

Use this link to view How to Navigate

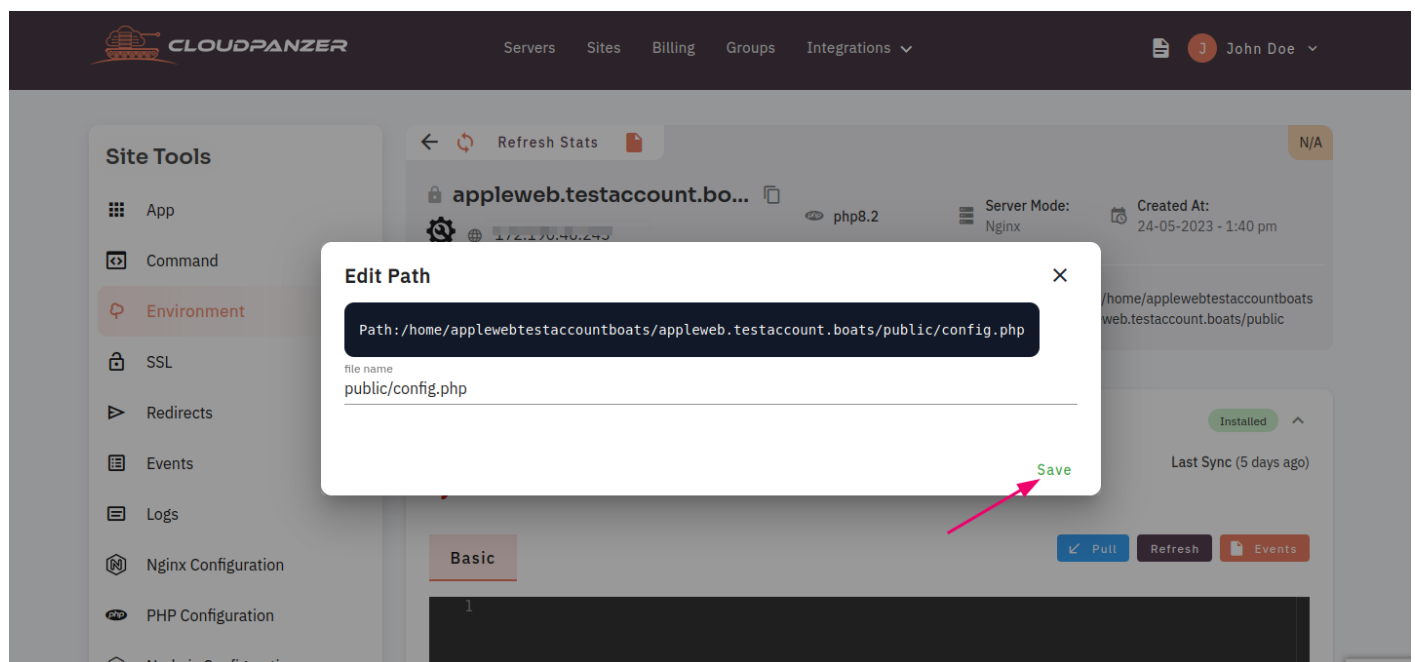

Select an Environment Option.

The screenshot displays the CloudPanzer dashboard interface. At the top, there is a navigation bar with the CloudPanzer logo and links for Servers, Sites, Billing, Groups, and Integrations. A user profile icon labeled 'Demo' is on the right. The main content area is divided into two sections. On the left, a 'Site Tools' sidebar lists various options: App, Environment (highlighted with a red arrow), SSL, Redirects, Events, Logs, Nginx Configuration, PHP Configuration, Node.js Configuration, Shell Settings, and Password Management. The right section shows the configuration for a site named 'demo.testaccount.boats'. It includes details like 'php8.2', 'Server Mode: Nginx', and 'Created At: 31-08-2023 - 10:55 am'. Below this, the 'Site Environment' section is visible, showing the 'Path (/home/demotestaccountboats/demo.testaccount.boats/public/.env)' and a 'Last Sync (7 hours ago)' status. A 'Basic' tab is selected, and there are buttons for 'Generate .Env', 'Pull', 'Refresh', and 'Events'. A code editor area is partially visible at the bottom.

5. Click on the Edit Button.

6. Edit dialog box will show. Here, you can change the path and then click on the save button.
