

How to Edit Site Environment Path in CloudPanzer?

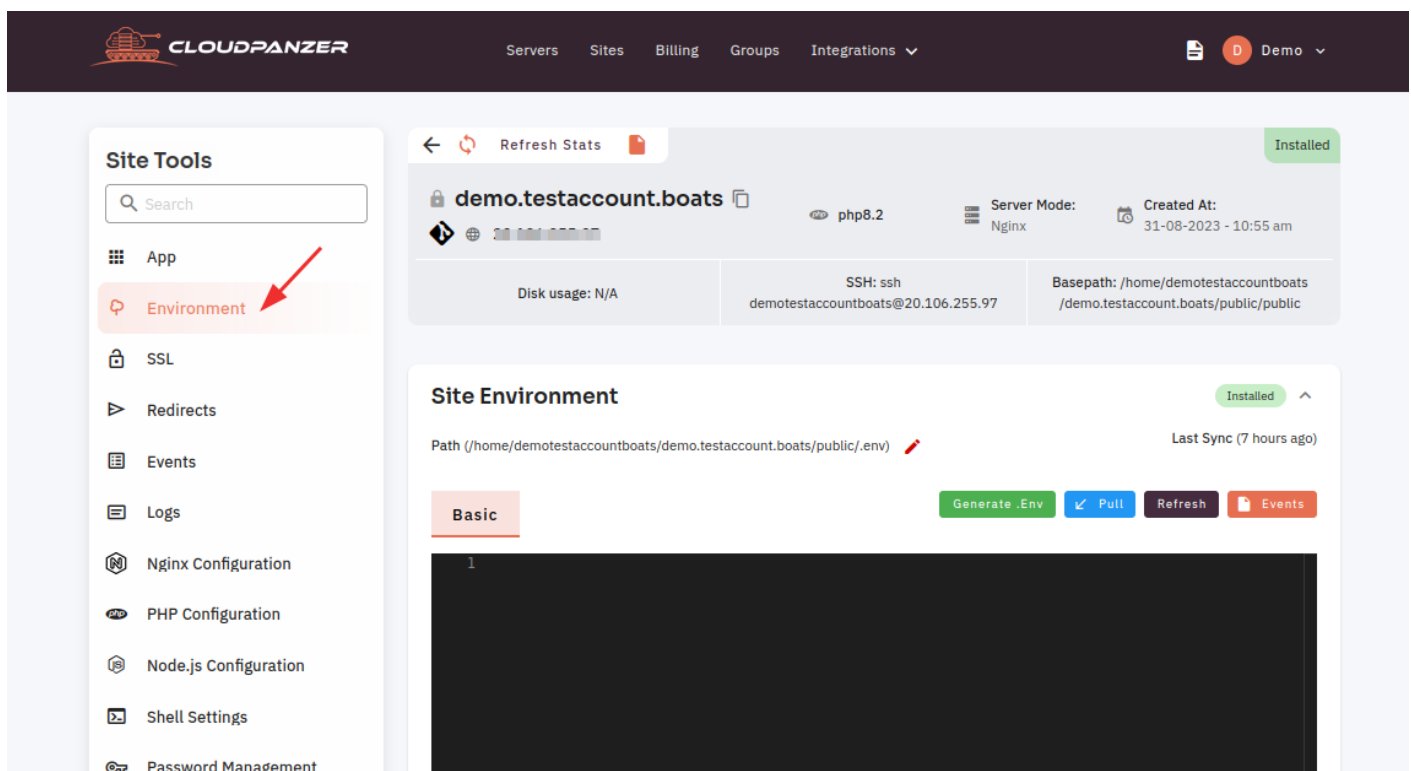

In the context of a domain, "site environment" refers to the digital or online aspects of a website or web application, including hosting, design, content, security, performance, and user experience. It encompasses everything related to the domain's online presence and functionality.

Follow the steps below to Edit the Site Environment Path

Navigate to the Site Environment

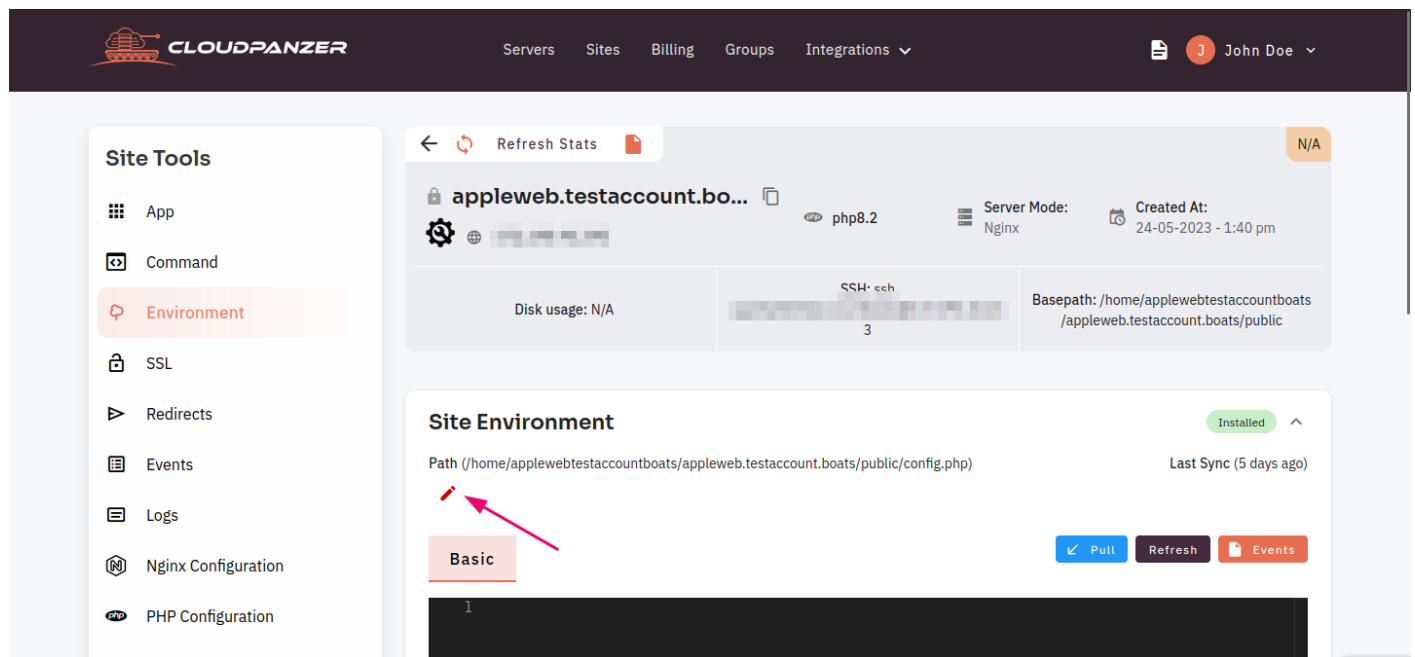

Use this link to view How to Navigate

Select an Environment Option.

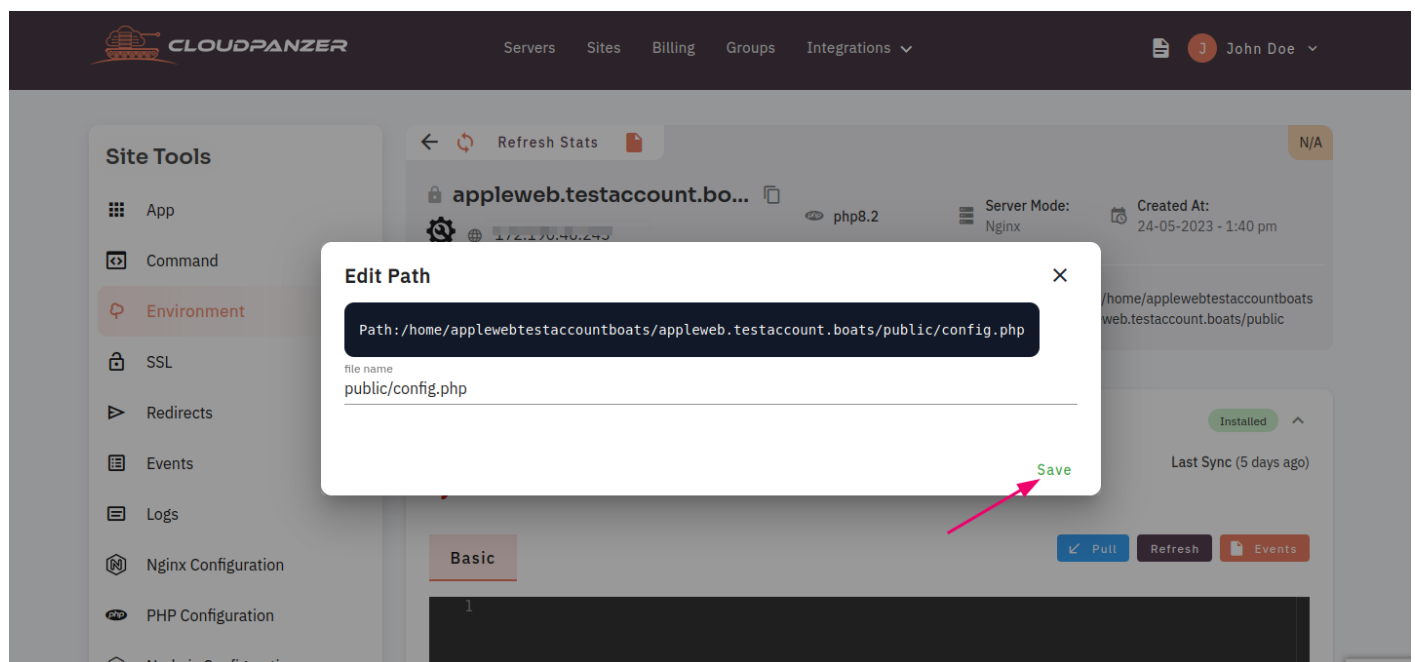

The screenshot displays the CloudPanzer dashboard interface. At the top, there is a navigation bar with the CloudPanzer logo and links for Servers, Sites, Billing, Groups, and Integrations. A user profile icon labeled 'Demo' is also present. On the left side, a 'Site Tools' sidebar lists various management options: App, Environment (highlighted with a red arrow), SSL, Redirects, Events, Logs, Nginx Configuration, PHP Configuration, Node.js Configuration, Shell Settings, and Password Management. The main content area shows the configuration for a site named 'demo.testaccount.boats'. It includes details like 'php8.2', 'Server Mode: Nginx', and 'Created At: 31-08-2023 - 10:55 am'. Below this, a 'Site Environment' section is visible, showing the current path as '/home/demotestaccountboats/demo.testaccount.boats/public/.env'. This section includes buttons for 'Generate .Env', 'Pull', 'Refresh', and 'Events', along with a 'Last Sync (7 hours ago)' status indicator.

5. Click on the Edit Button.

6. Edit dialog box will show. Here, you can change the path and then click on the save button.
