How to Enable And Disable Always Online Mode?

Online mode refers to a state in which a device or system is connected to the internet and able to communicate with other devices or systems over the internet. This is in contrast to offline mode, in which a device or system is not connected to the internet and is unable to communicate with other devices or systems over the internet.

Tutorial :

Follow the steps below to Enable And Disable Always Online Mode.

Navigate to the Setting (Use this link to view How to Navigate).

Enable Always Online Mode :

For "**Always Online**", on the switch button. OR Click on the update button.

Caching Level

Determine how much of your website's static content you want Cloudflare to cache. Increased caching can speed up page load time.

- ○ No query string
- ○ Ignore query string
- ● Standard

Browser Cache TTL

Determine the length of time Cloudflare instructs a visitor's browser to cache files. During this period, the browser loads the files from its local cache, speeding up page loads.

Always Online™ [beta]

Keep your website online for visitors when your origin server is unavailable. Always Online serves limited copies of web pages to users instead of errors when your server is unreachable.

An updated version of Always Online uses the Internet Archive's Wayback Machinea to serve more comprehensive snapshots than what were previously available. Updating this Service will share some of your website's information with the Internet Archive in order to make this feature functional. By updating this Service, you agree to the Supplemental Terms for Always Online.

Update

Here, you can see Always Online Mode Enabled successfully.
