

How to Enable And Disable Development Mode?

<https://www.youtube.com/embed/98EM19oRt9E>

Development mode is a term that can refer to a variety of different things depending on the context in which it is used. In general, development mode refers to a state or configuration in which a system, device, or application is being developed, tested, or debugged.

Follow the steps below to Enable And Disable Development Mode.

Navigate to the Setting (Use this link to view How to Navigate).

Enable Development Mode :

Click on the switch button.

The screenshot displays the CloudPanzer dashboard interface. At the top, there is a navigation bar with the CloudPanzer logo and links for Servers, Sites, Billing, Groups, and Integrations. A user profile icon and 'Demo2' are visible on the right. Below the navigation bar, the breadcrumb trail reads: Jane's Account / testaccount.boats / Setting. On the left side, there is a sidebar with the Cloudflare logo, email address, and a 'Setting' button highlighted with a red arrow. The main content area shows the 'testaccount.boats' settings. It includes fields for 'Original Name' and 'Server Name', both of which are redacted. Below these fields, it shows 'Integration Name: Jane's Account' and 'Created: 16-01-2023 - 1:17 pm'. A search bar is present. At the bottom, there are tabs for 'Cache', 'SSL/TLS', 'Security', and 'Network'. The 'Cache' tab is selected, and within it, the 'Development Mode' section is visible. It contains a toggle switch that is currently turned off, with a red arrow pointing to it. Below the toggle, a note states: 'Note: Enabling this feature can significantly increase origin server load. Development mode does not purge the cache so files will need to be purged after development mode expires.'

Here, you can see Development Mode Enabled successfully.

The screenshot shows the Cloudflare dashboard for the account 'Jane's Account' and site 'testaccount.boats'. The 'Setting' tab is active, and the 'Cache' sub-tab is selected. The 'Development Mode' toggle is turned on, indicated by a red arrow. The toggle is labeled 'After Development Mode Expires : 03:-1:54 seconds'. A note below the toggle states: 'Note: Enabling this feature can significantly increase origin server load. Development mode does not purge the cache so files will need to be purged after development mode expires.' The top navigation bar includes links for Servers, Sites, Billing, Groups, and Integrations. The left sidebar shows the Cloudflare logo, Email, Register, Dns, and Setting options. The right sidebar shows the 'Active' status of the site.

Disable Development Mode :

Click on the switch button.
