

How to Enable and Disable Under Attack Mode ?

Under Attack, the mode is a feature provided by Cloudflare that helps protect your website from various types of cyber threats, such as DDoS attacks, brute force attempts, and others. In this mode, Cloudflare will present a JavaScript challenge to visitors of your website, which will help filter out malicious traffic and ensure that only legitimate users can access your site.

Tutorial :

3. Click on the "Setting" button.

The screenshot shows the Cloudflare dashboard for a domain named 'testaccount.boats'. On the left sidebar, the 'Setting' button is highlighted with a red arrow. The main content area shows the domain's integration details, including the original name, server name, and integration name. Below this is the 'Manage DNS' section, which contains a table of DNS records.

Type	Name ↑	Content	Proxy Status	TTL	Actions
A	qwertypppp.testaccount.boats	192.0.0.1	Proxied	Auto	
A	site1.testaccount.boats	20.231.7.238	<input type="checkbox"/>	Auto	
A	testaccount.boats	192.64.119.73	Proxied	Auto	
CNAME	www.testaccount.boats	parkingpage.namecheap.com	Proxied	Auto	

4. Click on the "Security" button.

The screenshot shows the Cloudflare dashboard for the account 'Jane's Account' and site 'testaccount.boats'. The 'Security' tab is selected, and the 'Development Mode' toggle is currently turned off. A red arrow points to the toggle switch. A warning note below the toggle states: 'Note: Enabling this feature can significantly increase origin server load. Development mode does not purge the cache so files will need to be purged after development mode expires.'

5. Click on the switch button for "Enable Or Disable" Under Attack Mode.

The screenshot shows the Cloudflare dashboard for the account 'Jane's Account' and site 'testaccount.boats'. The 'Security' tab is selected, and the 'Under Attack Mode' toggle is currently turned on. A red arrow points to the toggle switch. The text below the toggle reads: 'Show visitors a JavaScript challenge when visiting your site.'
