

# How to Enable Site Protection through the cloudpanzer website?

As the use of mobile devices continues to increase, it's important to ensure that your Cloudpanzer is accessible and user-friendly on these devices. Enabling your Cloudpanzer for mobile apps can provide a seamless experience for your users and can potentially increase traffic to your site.

## **Tutorial :**

**You can watch the Video or Continue reading the post.**

<https://www.youtube.com/embed/gHmDoY4kXoA>

Follow the steps below to Enable the app.

**Navigate to the app from Dashboard (Use this link to view How to Navigate)**

1. Click on the Enable Button.

The screenshot shows the control panel for the domain **ifc.testaccount.live**. The top bar displays the domain, IP **192.1.0.0**, PHP version **php8.1**, Region **India**, and creation time **21-12-2022 - 3:56 pm**. Below this, a summary row shows **Disk usage: 6.7M**, **SSH: ssh ifctestaccountlive@192.1.0.0**, and **Basepath: /home/ifctestaccountlive/ifc.testaccount.live/public**.

The **Site App** section is active, showing **Opencart** as the installed application. A red box highlights the **Opencart** icon, and a red arrow points to the **Enable** button under the **Uninstall Protection** section, which states "This site app is not protected."

The **Install Opencart** section below shows the application is **Installed**. It includes fields for **Database User** (ifcuser), **Database** (ifcdb), and **Database Password** (FNzUXgCMFENZ54SY). A red arrow points to the **Yes** button in the confirmation dialog.

2. Click on the Yes button.

This screenshot shows the same control panel interface as the first image, but with a confirmation dialog box overlaid in the center. The dialog is titled **Enable Uninstall Protection** and asks "Are you sure?". It has two buttons: **No** and **Yes**. A red arrow points to the **Yes** button, indicating the user's selection to enable the protection.

Here, you can see the Enabled Open cart was successful.
