

How to install PhpMyAdmin on a domain through the cloudpanzer website?

PhpMyAdmin is a free and open-source web-based database management tool written in PHP. It is designed to allow users to manage their databases through a web browser easily. With phpMyAdmin, users can create, modify, and delete databases, tables, and table fields, execute SQL statements and manage users and privileges.

Prerequisites :

You must have an Active Server and A Site Configured on your server to perform the PHP My Admin installation on the site. You can jump to the tutorial section if the above conditions are proper, Or first follow the links below to set up the prerequisites.

How to install a Server
