

How to manage Authenticate Routes on site through the cloudpanzer website?

Follow the steps below to Site Authenticate Routes Navigation.

1: Once logged in, look for a "Server" and click on it.

2. Click on the Site option and Select an Active Site.

The screenshot shows the Cloudpanzer dashboard. On the left, a sidebar menu has a red arrow pointing to the 'Sites' option. The main content area displays the 'upserver' site details, including its status (Active), server mode (Nginx), and uptime. Below this, the 'Active Sites' table lists two domains: 'apple.testaccountboats' and 'newsite.testaccountboats', both with a status of 'Installed'. A red arrow points to the 'apple.testaccountboats' entry in the table.

Domain	App	PHP	Status	User	SSH	Isolated	Events
apple.testaccountboats		php8.2	Installed	appletestaccountboats		Yes	
newsite.testaccountboats		php8.3	Installed	newsitetestaccountboats		Yes	

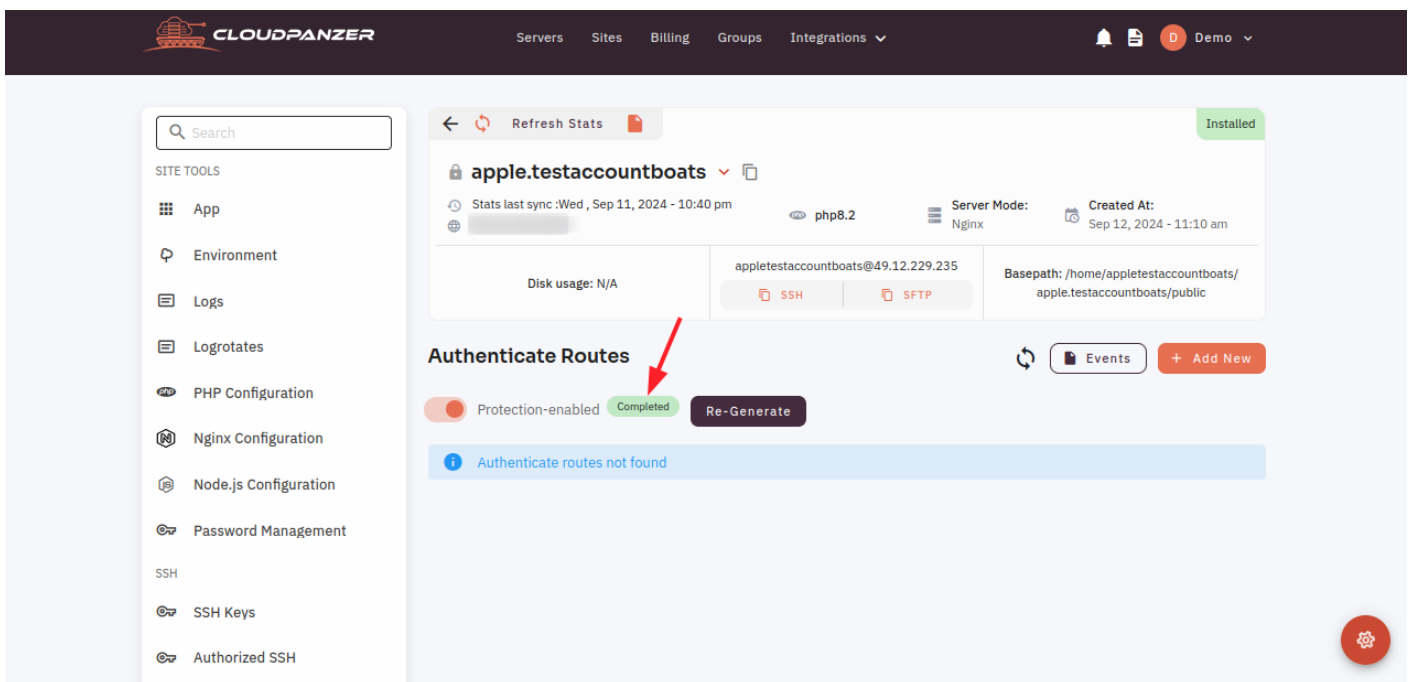

3. Click on the Authenticate Routes Option.

The screenshot shows the Cloudpanzer dashboard with the sidebar menu open. A red arrow points to the 'Authenticate Routes' option, which is highlighted in red. The main content area is empty.

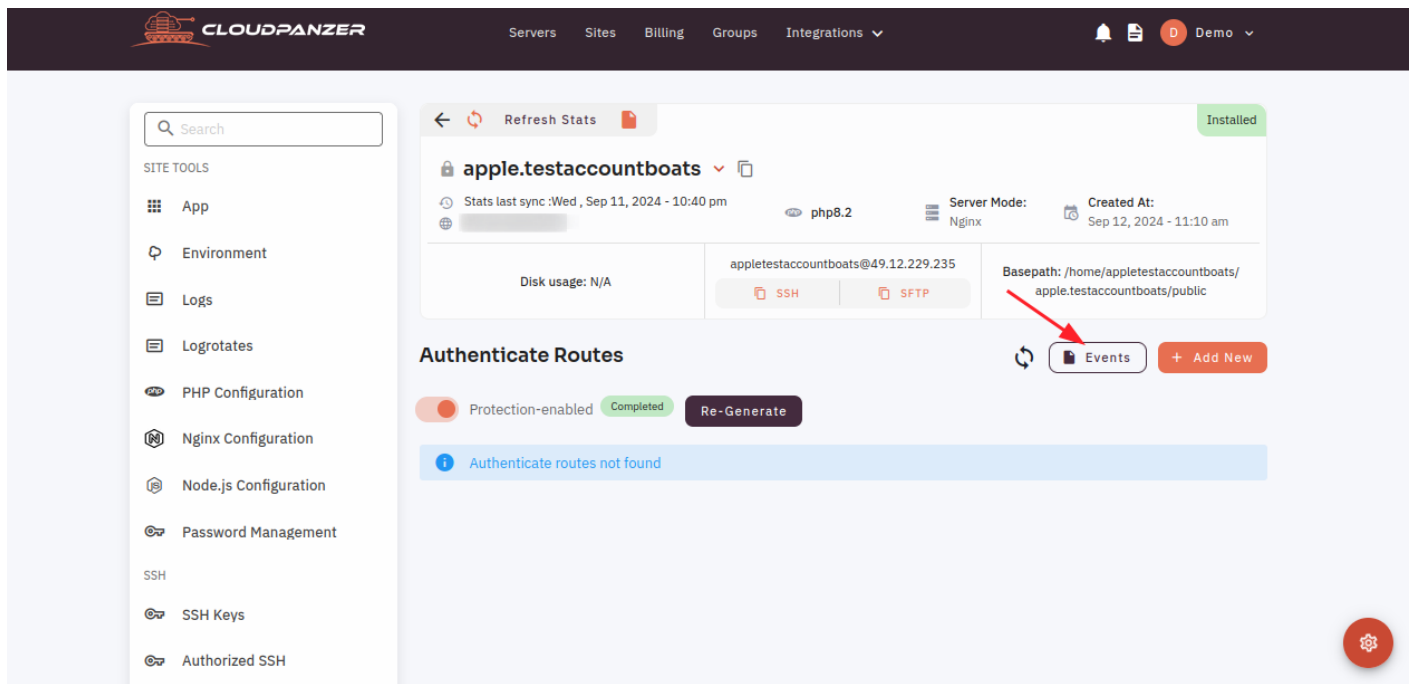

4. Click on the Switch button to enable Protection.

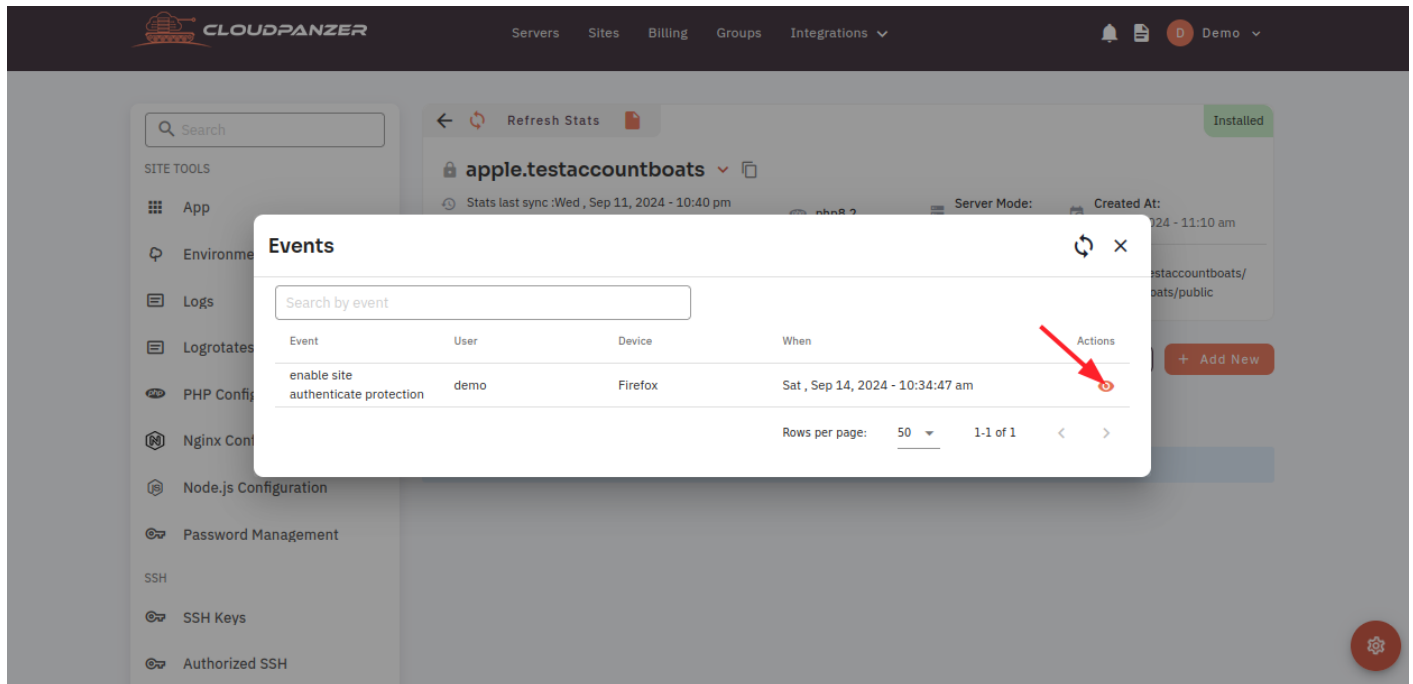

Here, you can see protection enabled successfully.

5. Click on the Event button.

6. Click on the Eye icon.

7. Click on the file icon.

Here, you can see that Event Data.

8. Click on the Add New Button.

9. Fill in the Fields and click on Save Button.

Here, you can see the Authenticate Routes Created Successfully.
