

How to perform different operations on a Prestashop Site Environment?

In the context of a domain, "site environment" refers to the digital or online aspects of a website or web application, including hosting, design, content, security, performance, and user experience. It encompasses everything related to the domain's online presence and functionality.

How to install a Server?

How to Setup a Site?

How To Install PrestaShop App on Domain.

Tutorial :

Navigate to the site Dashboard

Use this link to view How to Navigate

Select an Environment Option.

The screenshot shows the CloudPanzer dashboard. On the left, the 'Site Tools' sidebar has 'Environment' highlighted with a red arrow. The main panel displays the 'demo.testaccount.boats' site details, including its PHP version (8.2), server mode (Nginx), and creation date. Below this, the 'Site Environment' section shows the path to the .env file and a 'Pull' button. The 'Basic' tab is selected, and a code editor is visible.

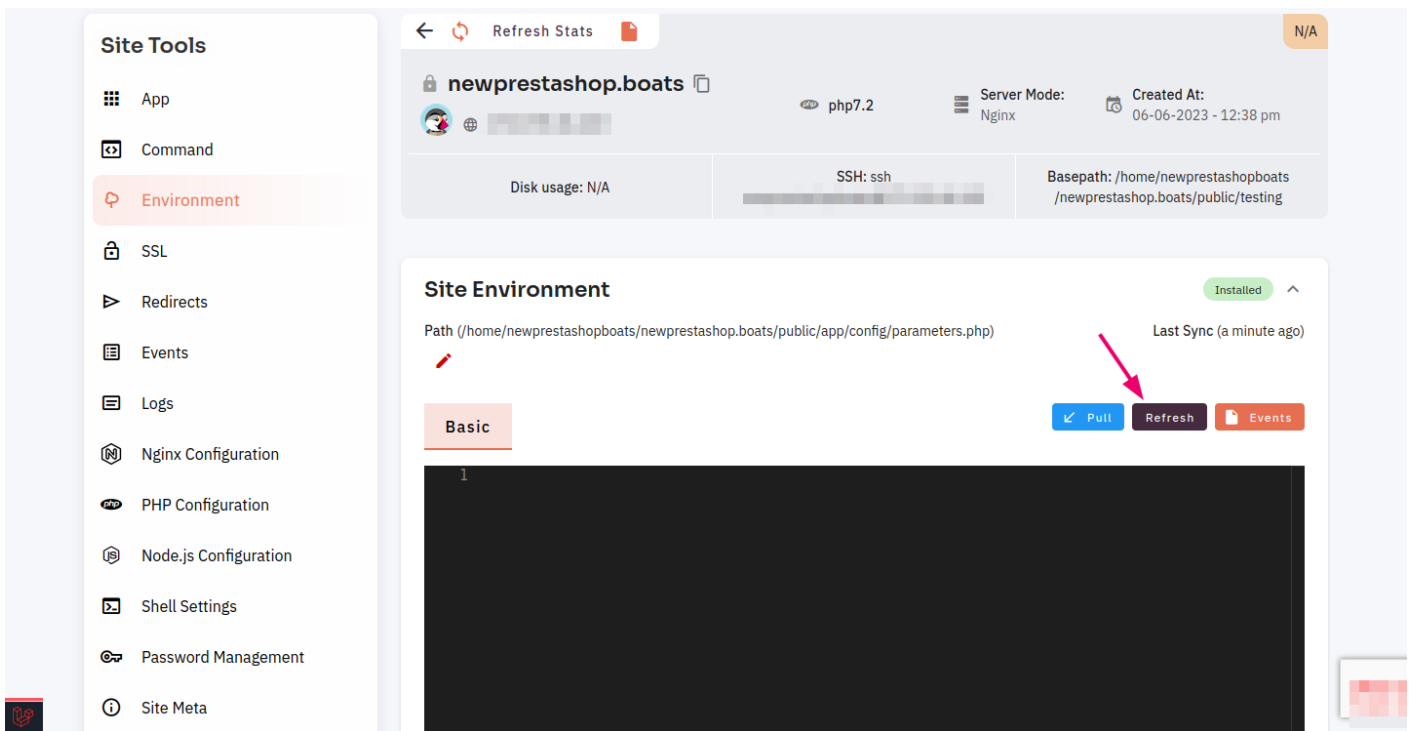

1. Pull :

1.1 Click on the pull button to fetch logs.

This screenshot shows the 'newprestashop.boats' site details. The 'Site Environment' section shows the path to the parameters.php file. A pink arrow points to the 'Pull' button, which is used to fetch logs. The 'Basic' tab is selected, and a code editor is visible.

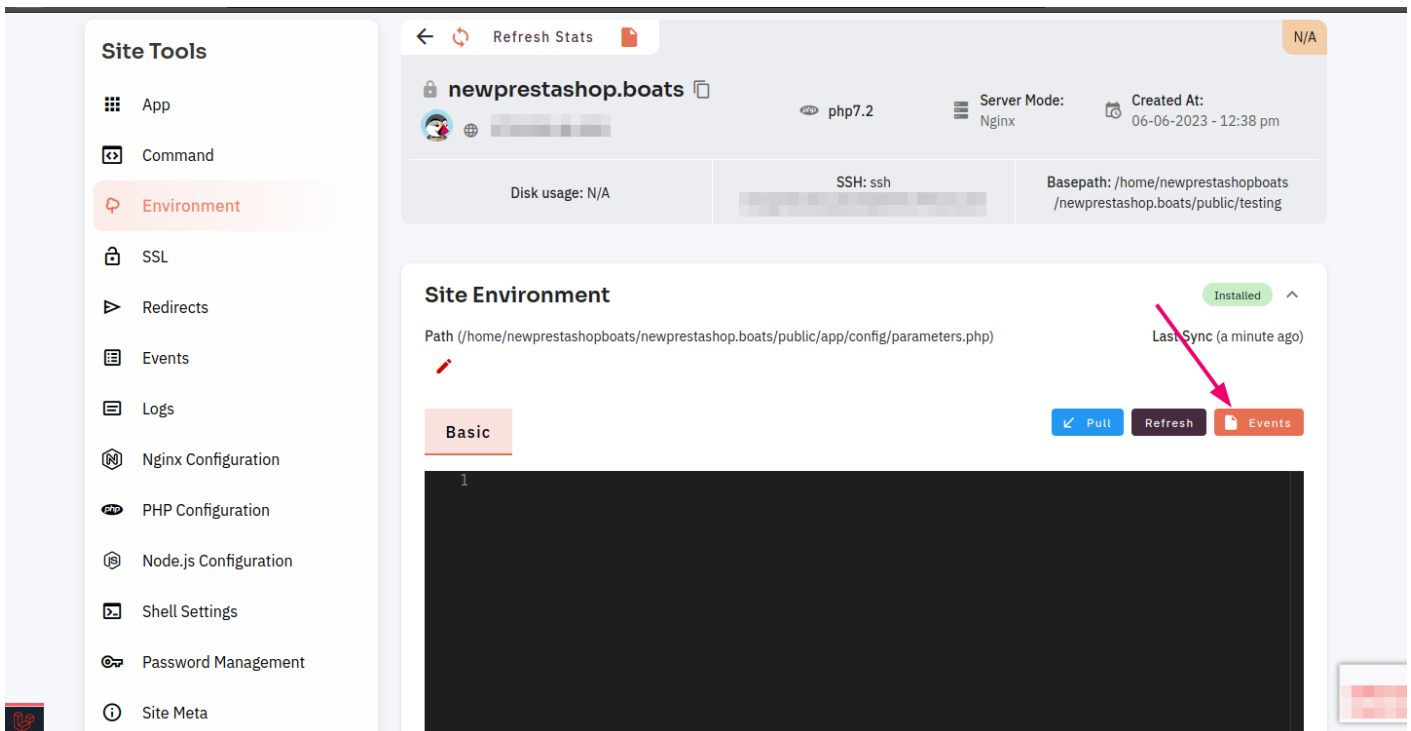

2. Refresh :

Click on the refresh button to refresh the site environment.

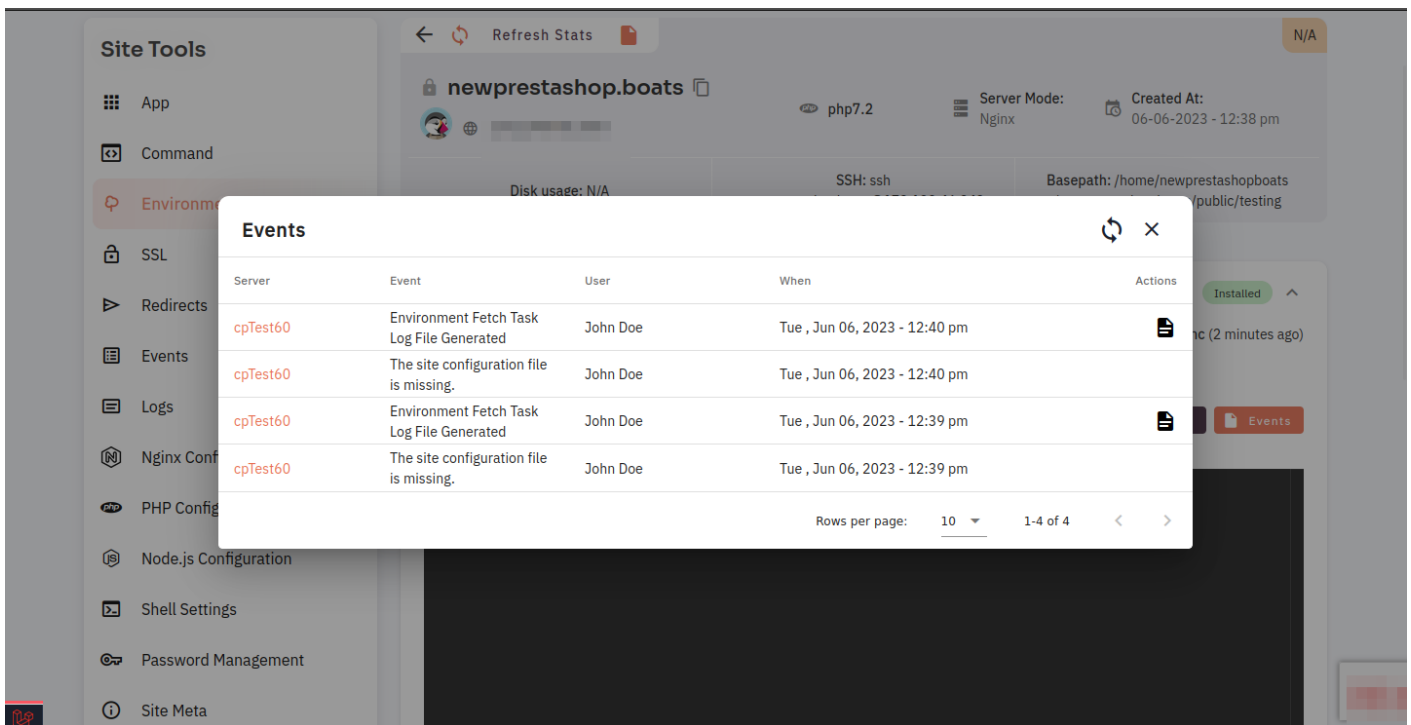

3. Check Event:

3.1 Click on the Events button to check events.

3.2 Here, you can see the list of events.
