

How to remove already installed PHP version?

Follow the steps below to remove the already installed PHP version

1: Once you are logged in, look for a "Server" and click on it.

2. Click on the PHP option.

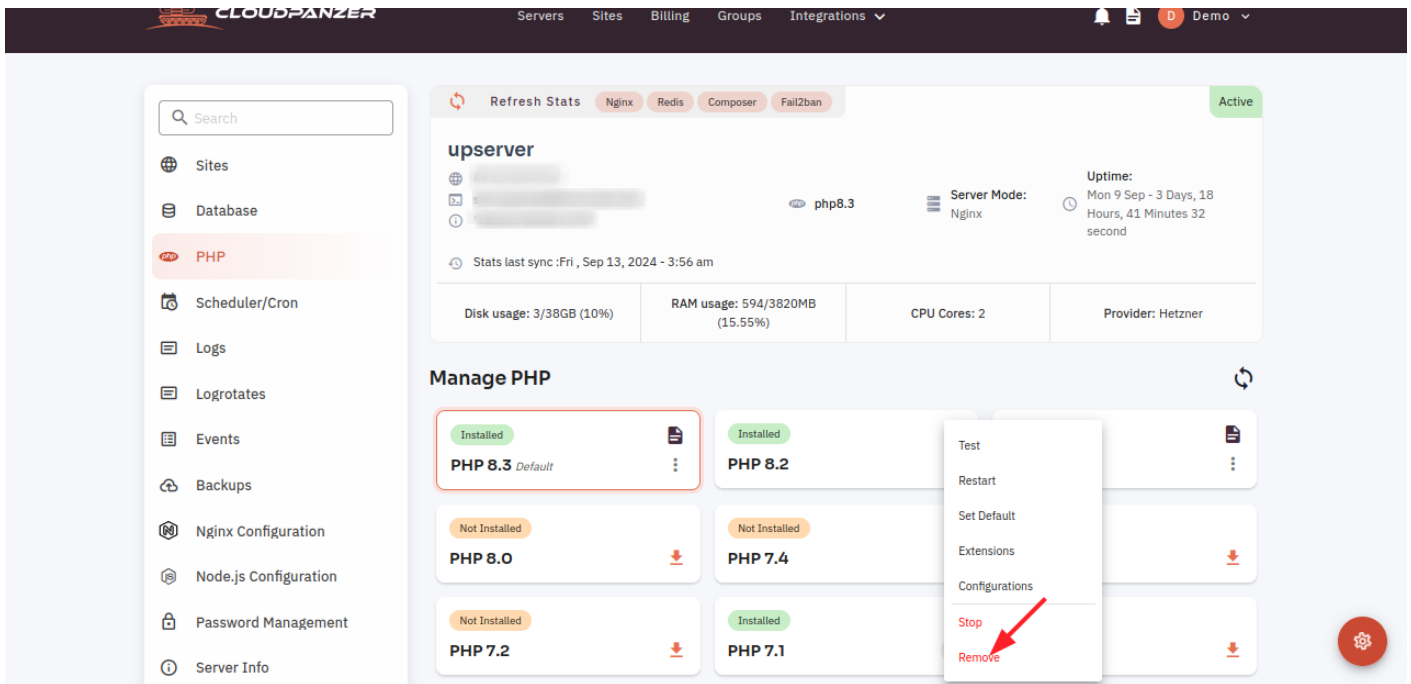

The screenshot shows the Cloudpanzer dashboard. On the left sidebar, the 'PHP' menu item is highlighted with a red arrow. The main content area displays the 'upserver' status and a 'Manage PHP' section with a grid of PHP versions. The versions are as follows:

PHP Version	Status	Action
PHP 8.3 Default	Installed	⋮
PHP 8.2	Installed	⋮
PHP 8.1	Installed	⋮
PHP 8.0	Not Installed	Download
PHP 7.4	Not Installed	Download
PHP 7.3	Not Installed	Download
PHP 7.2	Not Installed	Download
PHP 7.1	Installed	⋮
PHP 7.0	Not Installed	Download

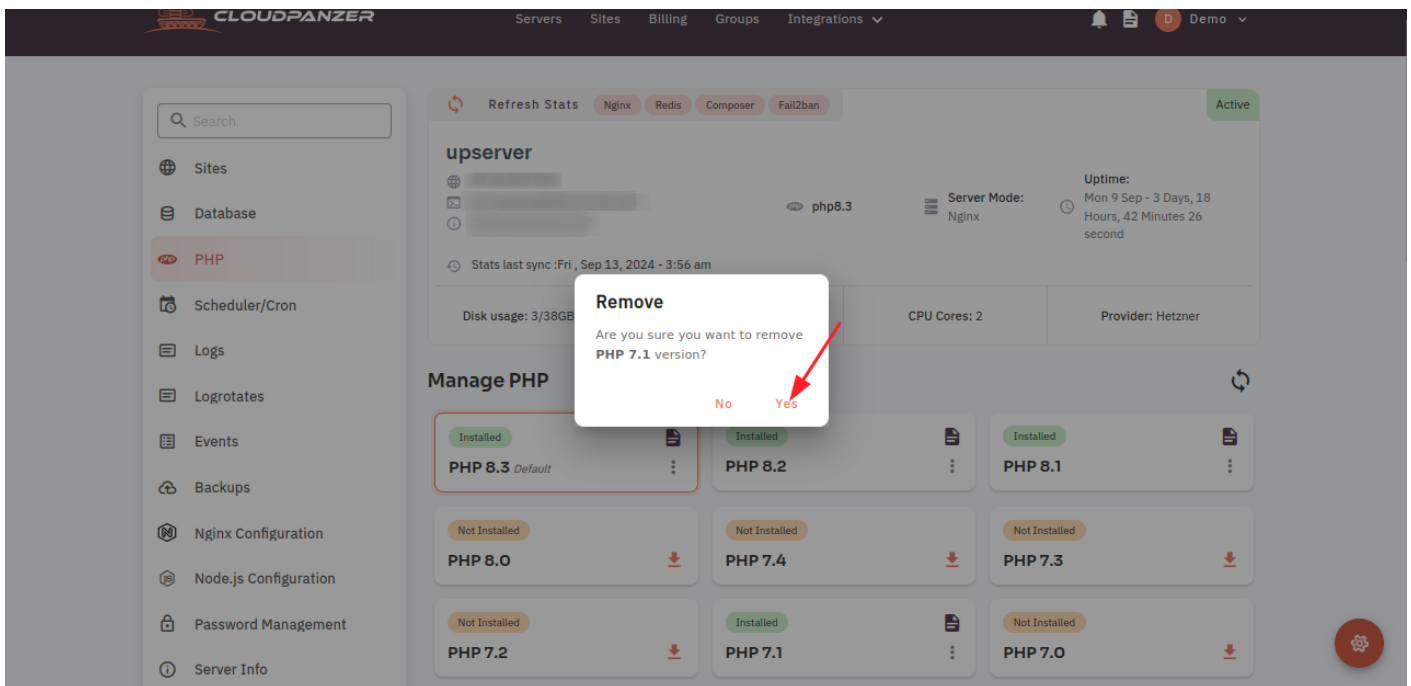

3. Click on the menu icon.

This screenshot is similar to the previous one, but with a red arrow pointing to the menu icon (three dots) for the 'PHP 7.1' entry in the 'Manage PHP' grid. The status of the other PHP versions remains the same.

4. Select an remove option.

5. Click on the Yes button.

6. Here you can see the installed version removed successfully.
