

How to Restore Default Nginx Configuration on site?

Restoring the default Nginx configuration on a site can be a useful task to perform when troubleshooting issues or when making changes to the web server's configuration. It's important to note that this process will overwrite any custom configurations that you may have made to the Nginx configuration file. If you need to restore your custom configurations, you can simply copy them back from the backup file that you created.

Prerequisites :

You must have an Active Server and Active Site. You can jump to the tutorial section if the above conditions are proper, Or first follow the links below to set up the prerequisites.

Follow the steps below to Restore Default Nginx Configuration

Navigate to the Nginx Configuration

(Use this link to view How to Navigate

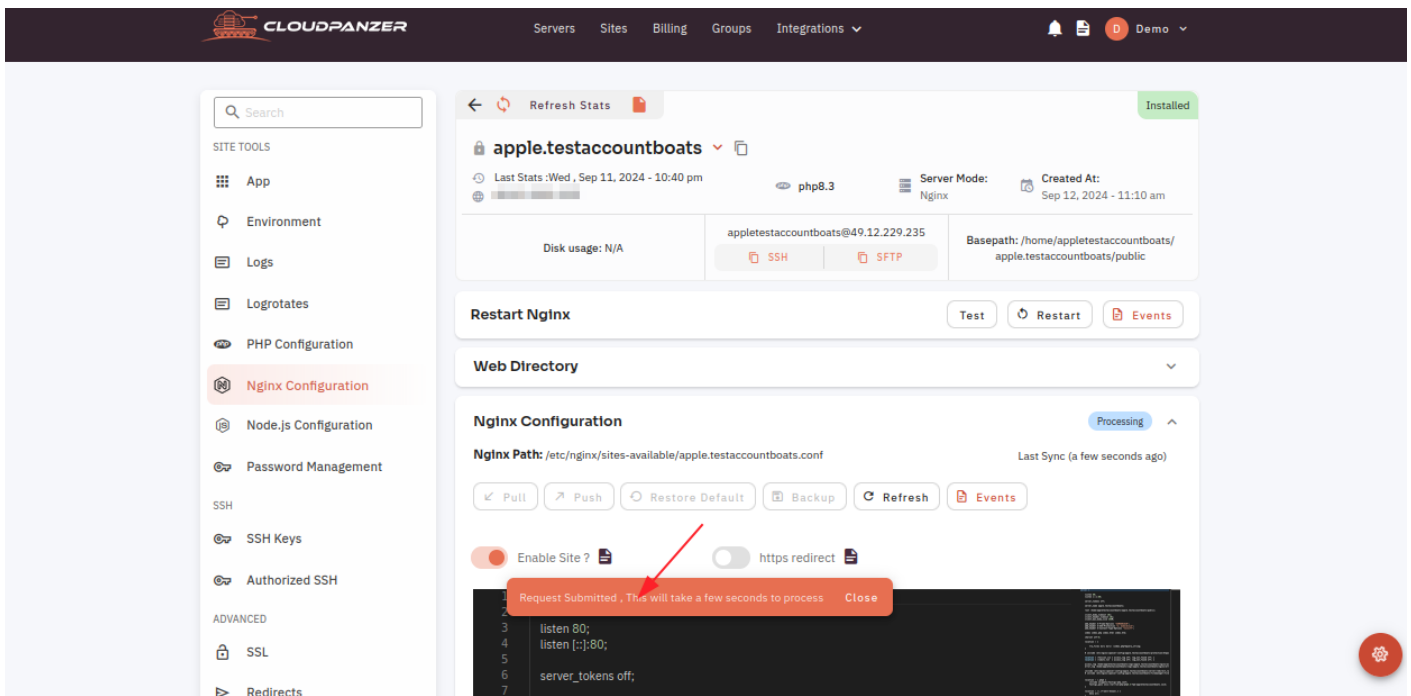

5. Click on the Restore Default button.

The screenshot shows the Cloudpanzer dashboard for a site named 'apple.testaccountboats'. The left sidebar lists various site tools, with 'Nginx Configuration' highlighted. The main panel displays site statistics (Last Stats: Wed, Sep 11, 2024 - 10:40 pm; php8.3; Nginx; Created At: Sep 12, 2024 - 11:10 am) and a 'Restart Nginx' button. Below this is the 'Nginx Configuration' section, which includes a 'Nginx Path' (/etc/nginx/sites-available/apple.testaccountboats.conf) and a 'Last Sync' timestamp (4 minutes ago). A red arrow points to the 'Restore Default' button in the configuration toolbar. The configuration code is visible in a text area at the bottom.

6. Click on the yes button.

This screenshot shows the same Cloudpanzer interface as the previous one, but with a confirmation dialog box open. The dialog is titled 'Restore Default' and asks 'Are you sure you want to restore default nginx Configuration?'. It has two buttons: 'No' and 'Yes'. A red arrow points to the 'Yes' button. The background interface is dimmed, showing the 'Nginx Configuration' section and the 'Restart Nginx' button.

Here, you can see the Site Nginx Tested successfully.
