

How to run a Command through the Cloudpanzer website?

Running a command in a computer system allows you to perform a specific task or function. Whether you are working on a personal server, being able to execute commands is a crucial skill for any system administrator or user.

Prerequisites :

You must have an Active Server and Active Site. You can jump to the tutorial section if the above conditions are proper, Or first follow the links below to set up the prerequisites.

How to install a Server

How to Setup a Site

How to Navigate to Apps Under Website

Tutorial :

You can watch the Video or Continue reading the post.

Follow the steps below to run a Command

Navigate to the Run Command

(Use this link to view How to Navigate)

4: Write a command and click on the Run button.

The screenshot shows the 'Run Command' interface. On the left is a sidebar with a menu including 'App', 'Environment', 'SSL', 'Redirects', 'Events', 'Logs', 'Apache Configuration', 'PHP Configuration', 'Node.js Configuration', 'Shell Settings', 'Password Management', 'Site Meta', 'Actions', and 'Server Tools'. The 'Command' option under 'Server Tools' is selected. The main panel has a header with 'Disk usage: N/A', 'SSH: ssh demo2testaccountboats@20.121.218.164', and 'Basepath: /home/demo2testaccountboats/demo2.testaccount.boats/public'. Below this is the 'Run Command' section with 'Execute Path : /home/demo2testaccountboats/demo2.testaccount.boats/public'. A text input field contains 'ls', a dropdown menu is set to '60', and a red 'Run' button is highlighted with a red arrow. Below the input fields is a 'History of Commands' table with columns: User, Command, Timeout, Status, Run at, Events, and Actions. The table is currently empty with the message 'No data available'. At the bottom right of the table, it says 'Rows per page: 10'.

5: Here, you can see the run command added successfully.

The screenshot shows the 'Run Command' interface after a successful execution. The 'Run' button is still visible. The 'History of Commands' table now contains one entry: 'demo' user, 'ls' command, '60s' timeout, and 'Installed' status. A red arrow points to the 'Installed' status. The 'Run at' column shows '08-29-2023 - 11:02 am'. Below the table, it says 'Rows per page: 10' and '1-1 of 1'. At the bottom of the interface, a red notification bar says 'Request Submitted , This will take a few seconds to process' with a 'Close' button.
