

How to start a Daemon on a server through the CloudPanzer website?

Starting daemons on servers is necessary to enable background processes that deliver various services, such as handling web requests, managing databases, processing emails, or facilitating network communication. These daemons operate independently, supporting the server's core functions and allowing users to access resources and services efficiently.

Prerequisites :

You must have an Active Server. You can jump to the tutorial section if the above conditions are proper, Or first follow the links below to set up the prerequisites.

How to install a Server

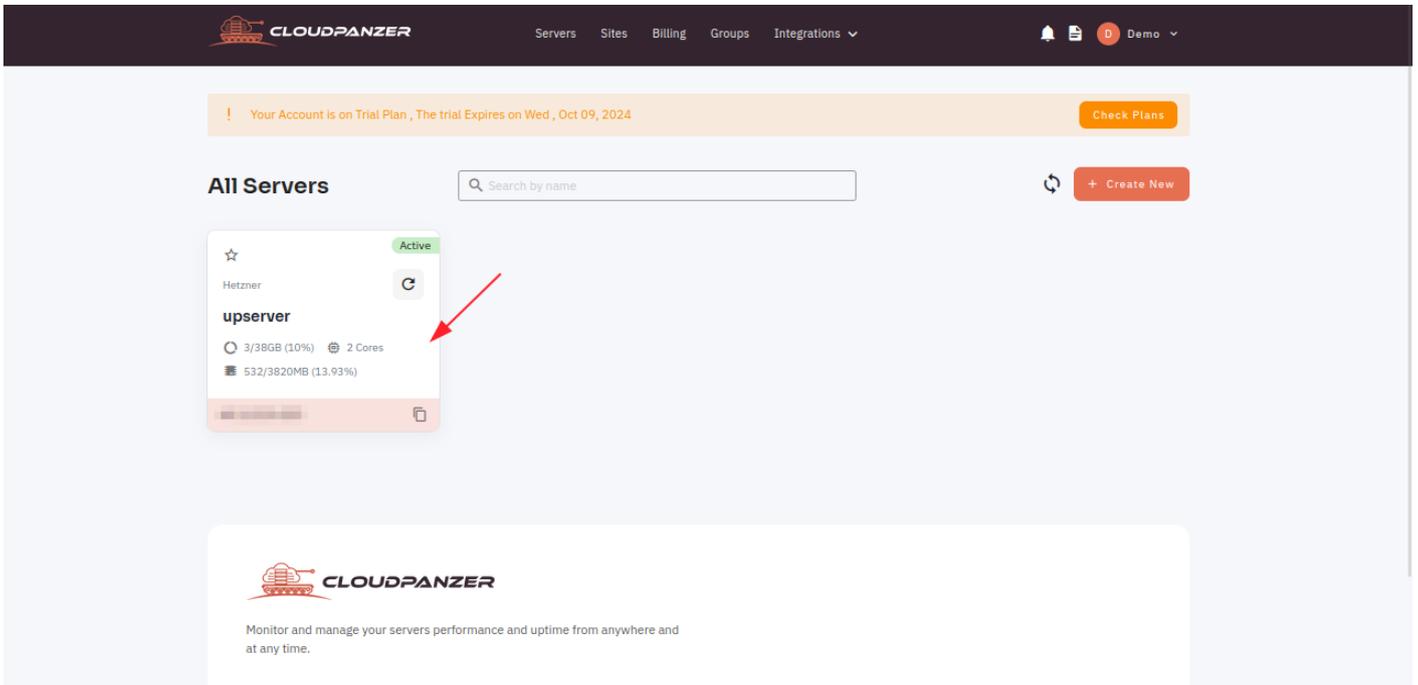

Tutorial :

You can watch the Video or Continue reading the post.

Follow the steps below to Start Daemon.

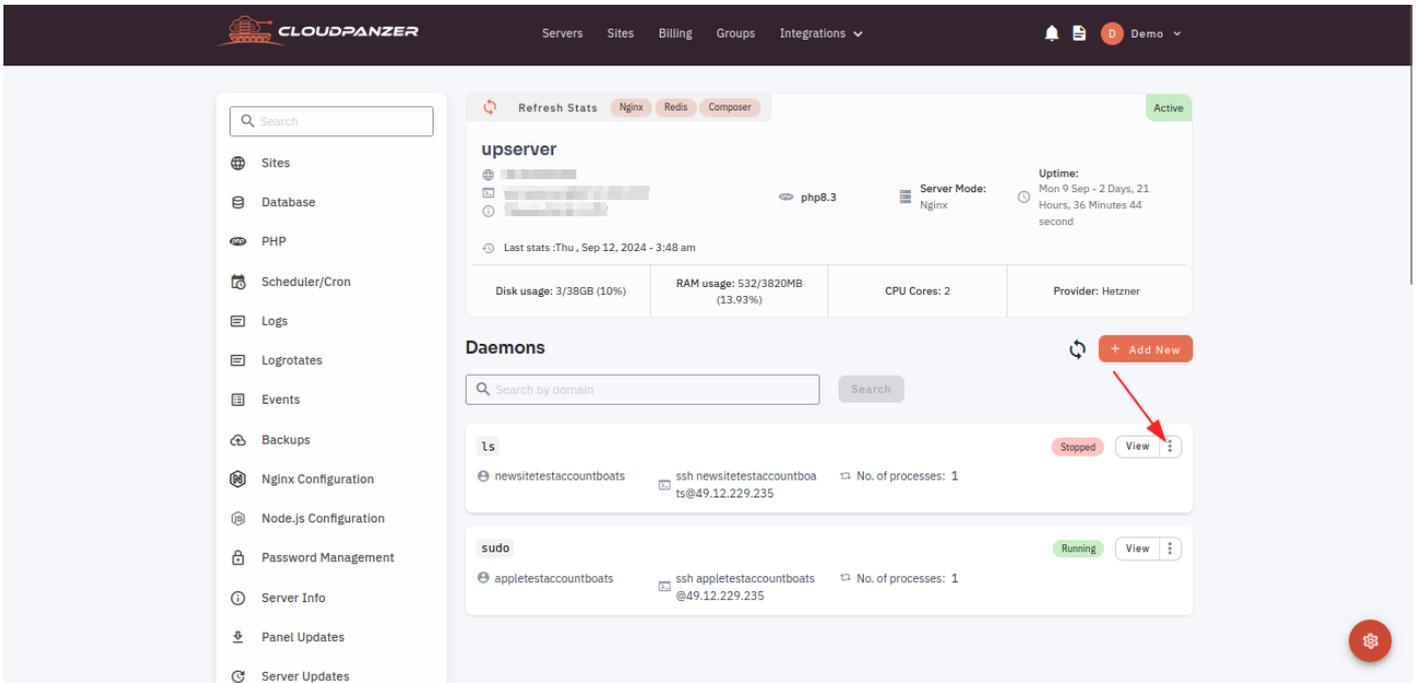

1. Once you are logged in, look for a "Server" and click on it.

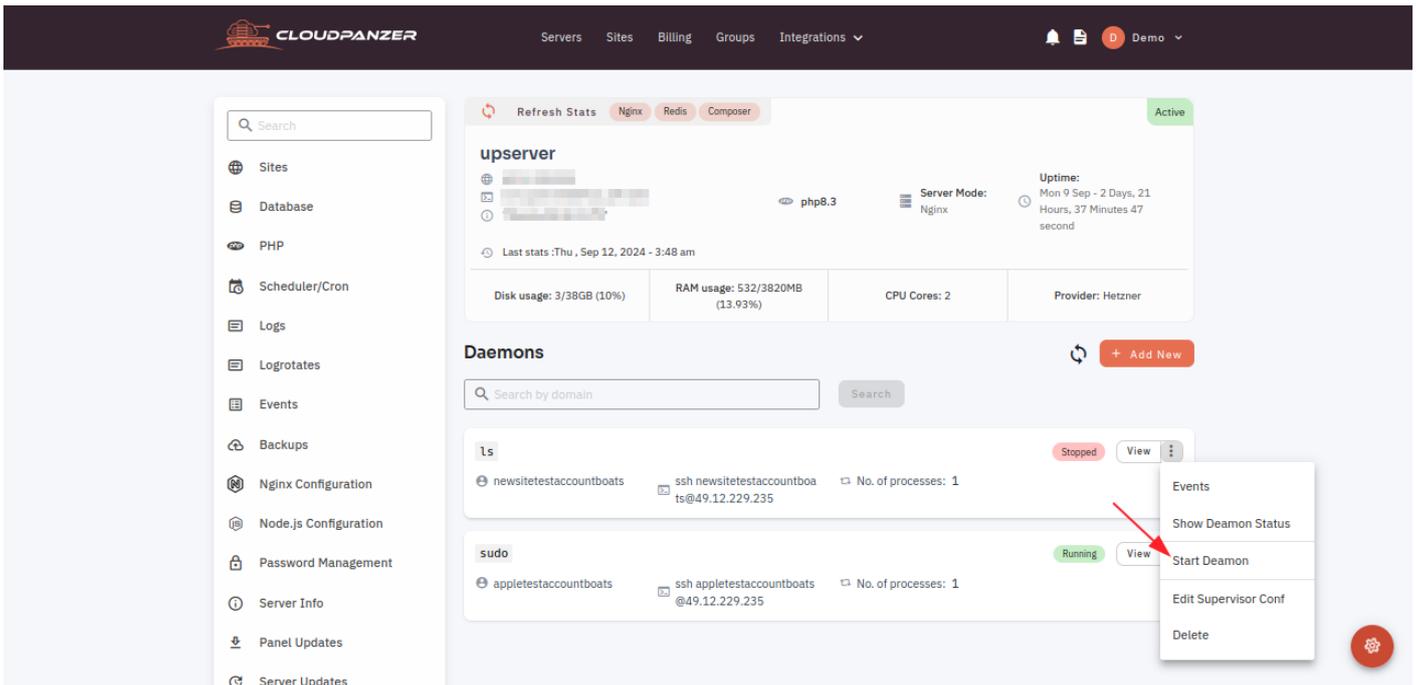

2. Click on the daemons option.

3. Click on the menu icon.

4. Click on the Start Daemon option.

Here, you can see the daemon started successfully.

The screenshot displays the Cloudpanzer dashboard for a server named 'upserver'. The top navigation bar includes 'Servers', 'Sites', 'Billing', 'Groups', and 'Integrations'. The main content area is divided into two sections: 'Refresh Stats' and 'Daemons'. The 'Refresh Stats' section shows server details such as 'php8.3', 'Server Mode: Nginx', and 'Uptime: Mon 9 Sep - 2 Days, 21 Hours, 39 Minutes 7 second'. Below this, resource usage is listed: 'Disk usage: 3/38GB (10%)', 'RAM usage: 532/3820MB (13.93%)', 'CPU Cores: 2', and 'Provider: Hetzner'. The 'Daemons' section features a search bar and a list of running processes. Two daemons are listed: 'ls' and 'sudo'. The 'ls' daemon is highlighted with a red arrow pointing to its 'Running' status. The 'sudo' daemon is also shown as 'Running'. A '+ Add New' button is visible in the top right of the Daemons section.
