

How to take backup of Site Environment on a server in CloudPanzer?

In the context of a domain, "site environment" refers to the digital or online aspects of a website or web application, including hosting, design, content, security, performance, and user experience. It encompasses everything related to the domain's online presence and functionality.

Prerequisites :

You must have installed the App on the site. You can jump to the tutorial section if the above conditions are proper, Or first follow the links below to set up the prerequisites.

How to install the App under the Website?

Tutorial :

You can watch the Video or Continue reading the post.

Follow the steps below to the backup of the Site Environment

Navigate to the Site Environment

Use this link to view How to Navigate

Select an Environment Option.

The screenshot shows the CloudPanzer dashboard. On the left, the 'Site Tools' sidebar has 'Environment' highlighted with a red arrow. The main panel displays the 'demo.testaccount.boats' site details, including 'php8.2' and 'Nginx' server mode. Below this, the 'Site Environment' section shows the path '/home/demotestaccountboats/demo.testaccount.boats/public/.env' and a 'Basic' tab. A red arrow points to the 'Generate .Env' button.

4: Click on the Backup Button.

This screenshot shows the same CloudPanzer dashboard, but the 'demo.testaccount.boats' site is now configured with 'php8.1' and 'Apache' server mode. The 'Site Environment' section shows the path '/home/demotestaccountboats/demo.testaccount.boats/public/wp-config.php'. A red arrow points to the 'Backup' button in the 'Basic' tab. The 'Status' at the top right of the site details has changed from 'Installed' to 'Completed'.

5: Here, you can see the backup of the environment.
