

# How to view SSH public key on server in CloudPanzer?

Follow the steps below to view the SSH public key

1: Once logged in, look for a "Server" and click on it.

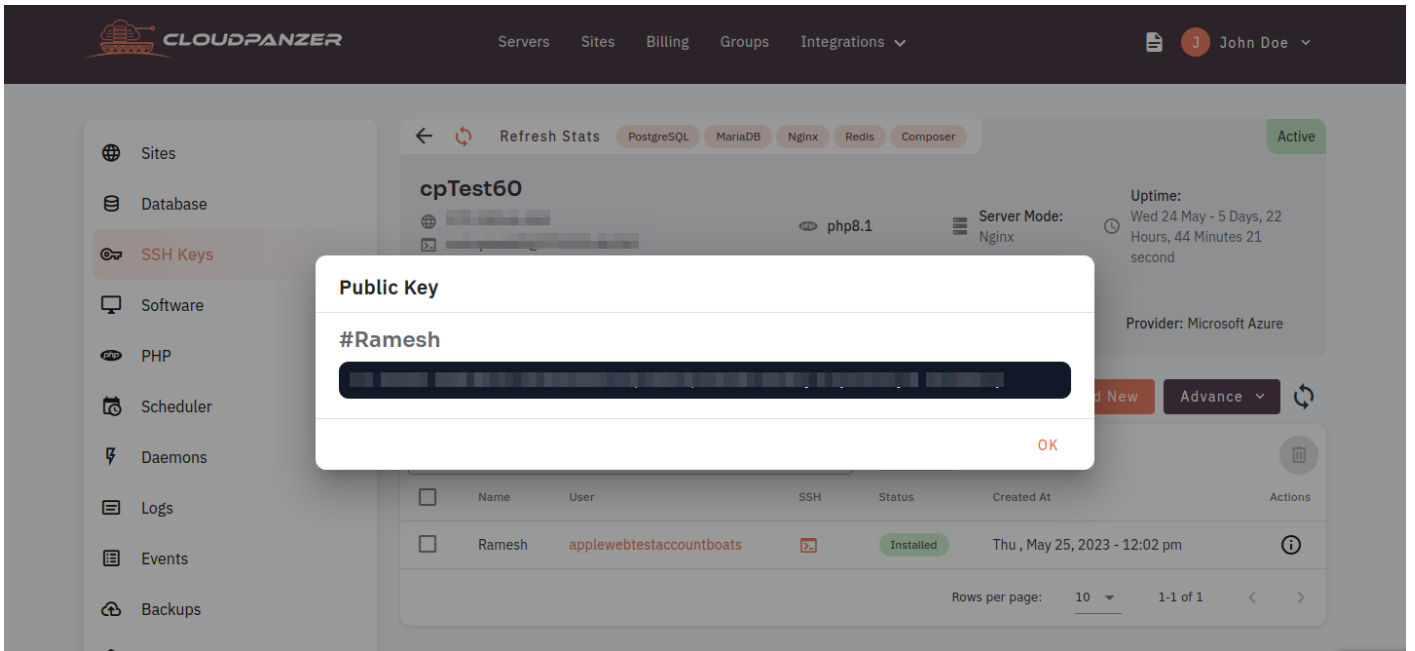

2. Click on the SSH Key option.

The screenshot shows the CloudPanzer dashboard. The left sidebar contains a menu with items: Sites, Database, SSH Keys (highlighted with a red box and a red arrow), Software, PHP, Scheduler, Daemons, Logs, Events, Backups, and Nginx Configuration. The main content area displays the 'cpTest60' server status. At the top, there's a 'Refresh Stats' button and tabs for PostgreSQL, MariaDB, Nginx, Redis, and Composer. The server status includes: Uptime: Wed 24 May - 5 Days, 22 Hours, 40 Minutes 34 second; Server Mode: Nginx; php8.1; Disk usage: 5/29GB (18%); RAM usage: 418/906MB (46.14%); CPU Cores: 1; Provider: Microsoft Azure. Below this, the 'SSH Keys' section is active, showing a table with one entry: Ramesh, applewebtestaccountboats, Installed, Thu, May 25, 2023 - 12:02 pm. A red arrow points to the 'SSH Keys' menu item in the sidebar.

3. Click on the view icon.

This screenshot is similar to the previous one, but the red arrow now points to the view icon (info icon) in the 'Actions' column of the SSH Keys table. The table entry for 'Ramesh' is still visible, and the status is 'Installed'.

4. Here you can see the public key has been shown successfully.
